WEST WASHINGTON SQUARE  
(230 SOUTH SEVENTH ST.)  
PHILADELPHIA  
U. S. A.

Washington Square Front of Building

How to Find Us

In December, 1912, we moved to the Farm Journal Building, a new concrete, fire-proof structure located on West Washington Square (230-24 South Seventh Street), a neighborhood which has become the publishing centre of Philadelphia. The fourth and fifth floors of the building and a portion of the basement were designed and built with special reference to the requirements of our business. The increase of our total floor space to 40,000 sq. ft. (two and one-half times that occupied by us at Twelfth and Walnut Sts.) has distinctly increased the general efficiency of our service.

Of the above mentioned space approximately 8400 sq. ft. is devoted to salesroom and offices. In this salesroom we maintain a permanent exhibit of over 6,000 different pieces of Laboratory Apparatus, all conveniently arranged for inspection and handling by our visitors. A dark room is provided for the demonstration of Projection and Photo-Micrographic Apparatus. Our office space is well lighted and ventilated and contributes to the comfort and welfare of our employees as well as to the thoroughness of their work. Some interior views of our establishment are to be found on various pages throughout the catalogue

Washington Square Side of Showroom Looking North

## PREFACE.

We believe that the principles underlying the organization and daily conduct of our business are understood and generally endorsed by those familiar with them. The following discussion is, therefore, offered chiefly for the information of those hitherto without experience in dealing with us.

**PRICES**—The prices throughout this catalogue are subject to change without notice. This is largely because the goods listed originate in over twelve hundred factories and in many instances we have no control over either the cost or the selling price. Certain discounts are allowed from our list prices to Institutions, State, City and U. S. Government Departments, Industrial Concerns and other organized establishments, conducting regular laboratory work, because of their aggregate annual purchasing power. These discounts are not allowed on occasional purchases of a few items only by those not regularly connected with laboratory work. Our discount sheet will be published at frequent intervals and important changes in both list price and discount noted therein. Prices on items not regularly carried in stock and designated "Duty Free" and "Duty Paid" are subject to more variation than regular stock prices because they are directly dependent upon the size of the individual order. (See also paragraph "Duty Free Importation" below.) They are printed for the guidance of customers in ascertaining the cost of individual items apart from large importation orders and in most instances the prices given apply to the importation of a single item of the article listed.

**BREAKAGE AND SHORTAGE**—We make no claim as to our infallibility and, while our goods are checked and packed by experienced employees under rigid control, breakages and shortages occasionally occur because of defective packing or of our mistakes. When such claims are clearly and promptly presented to us it is our custom to adjust them without undue argument as we desire to subordinate literal terms of contract to an underlying spirit of fairness and to maintain our interest in each transaction until our customer receives full satisfaction and value, no matter where or when our technical responsibility may end. We further assist in presenting established claims against the transportation companies from which we hold receipts for shipments. Customers will greatly facilitate the adjustment of such claims by refusing to receipt for goods received in damaged condition, until they have been examined and condition noted by the local freight or express agent.

**STOCK**—Unless otherwise designated the goods in this catalogue are mostly in stock for immediate delivery. A few domestic items of great weight or bulk are not always on hand but prompt factory delivery is usually possible. In addition, there are certain articles of European origin listed with both duty free and duty paid prices. Such designation indicates that they are not regularly carried in stock, usually because the demand for them is confined to institutions entitled to duty free importation. Where the word "Stock" is used the article is regularly carried in stock and the duty free price printed for the convenience of those entitled to it.

**DUTY FREE IMPORTATION SERVICE**—Under Paragraphs 573 and 654 of the Tariff Act of 1913 apparatus of foreign origin may be imported for Educational Institutions free of U. S. Customs duties under certain regulations established by the U. S. Treasury Department. The conduct of such importations is a special feature of our business and we believe our service in the carrying out of the many technicalities required is a great convenience to our customers. Duty free importations through our medium are usually handled at less expense, frequently at some saving in time and always with much less trouble, than when orders are placed directly. Duty Free prices f.o.b. Philadelphia on general lists of apparatus can not be printed either in our catalogue or on our discount sheet as ocean freights on such goods are mostly paid by the cubic meter and the delivered rate per unit of foreign currency depends, therefore, directly upon the relation between the bulk and value of any given shipment. All duty free quotations are made subject to the rulings of the Collector of the Port at which entry is made and the prevailing regulations established by the U. S. Treasury Department, and we do not guarantee duty free entry under any circumstances. Under the present ruling of the U. S. Treasury Department, which has been supported in the U. S. Courts, Hospitals, even when training schools for nurses are connected therewith, may not import free of duty.

**RETURN OF GOODS**—Customers are requested not to return goods for any reason until after communication is had with us. When the return is arranged suitable tags are sent which when attached to the articles in question insure prompt credit, repair or exchange, as indicated. The time involved in such preliminary arrangement is insignificant compared with the time and labor required to establish the identity and disposal of goods sent us without such precaution.

**SHIPMENTS**—Where no instructions are furnished with order we exercise our own judgment as to method of shipment, i.e., via rail, boat, parcel post, etc. All shipments are made in accordance with the regulations of the Interstate Commerce Commission and insurance only effected when specific directions are given, except in parcel post shipments which are automatically insured against both loss and breakage under a blanket policy, the small charge for such insurance being included on bills.

Our business is confined to the buying and selling of Apparatus and Reagents, mostly within the limits mentioned on the title page of this catalogue. We are not scientists, inventors or manufacturers and we are not equipped to design and experimentally develop scientific apparatus. We believe such work is properly done by the scientist in his laboratory, the manufacturer in his shop, or by the two in cooperation and that the function of the dealer advantageously begins only after such work is completed. We are ready whenever possible to facilitate cooperation between the scientist with ideas for development and selected manufacturers with facilities applying thereto. We own no patents, have part in no monopolies and all of the merchandise offered herein is obtainable either directly from the makers or through other dealers whenever our services fail in their operation toward the convenience, economy and general satisfaction of the purchaser.

A preface applying specifically to our business in Reagents is printed with the Reagent section of this Catalogue.

ARTHUR H. THOMAS COMPANY.

Bausch & Lomb Optical Company Works

**BAUSCH & LOMB OPTICAL COMPANY**—Under an arrangement in successful operation for the past fourteen years, we carry in stock in Philadelphia a complete line of Microscopes, Microtomes, Projection and Photo-Micrographic Apparatus as manufactured by the Bausch & Lomb Optical Company, of Rochester, N. Y. We distribute these products in Pennsylvania, New Jersey and the Southern states, at original factory prices, thereby saving customers in this territory both time and transportation expense. While nearly all of these goods are listed in this catalogue, we have for free distribution the following original Bausch and Lomb catalogues in editions specially prepared for us.

Microscopes and Accessories  
Microtomes

Photo-Micrographic Apparatus  
Projection Apparatus

Carl Zeiss Works

**CARL ZEISS, JENA**—Since 1899 we have been direct importers of all Zeiss products as applied to laboratory work. We carry in duty paid stock for immediate delivery a large assortment of Microscopes and Accessories, Refractometers, Haemacytometers, etc., at factory prices plus duty and transportation. All duty free importations of Zeiss products are handled by us at the minimum rate of 25¢ per Mark, f.o.b. Philadelphia. The catalogues, pamphlets and reprints of scientific articles published by the firm of Carl Zeiss constitute a distinct addition to scientific literature. We carry a complete assortment of these publications on hand for immediate distribution free of charge to scientists in the United States and publish from time to time a complete list thereof. We mention some of the more important catalogues and pamphlets as follows:—

Mikro 184. Microscopes and Accessories.  
Mikro 227-231. Ultra-Microscopy and Dark-ground Illumination Apparatus.  
Mikro 264. Photo-Micrographic Apparatus.  
Mikro 239. Large Projection Apparatus.  
Mikro 170 and 234. Photo-Micrographic Outfit for Ultra-Violet Light and Supplement to same.

Mikro 243. Epidiascope for the Projection of Opaque Objects, Microscopic Objects and Lantern Slides.  
Mess. 160. Optical Measuring Instruments.  
Mess. 165. Dipping Refractometer.  
Mess. 172. Abbe Refractometer.  
Mess. 173. Butter Refractometer.  
Mess. 188. Pulfrich Refractometer.

## IMPORTATION SERVICE FROM SPECIFIED EUROPEAN MAKERS

An important feature of our business is the importation service from specified European manufacturers of scientific instruments whose catalogues we supply to intending purchasers and whose goods we furnish at net factory prices plus our actual cost of importation, which is in most instances distinctly less than when orders are placed directly. This service is for obvious reasons much wider in its scope than is our business as described on the title page of this catalogue and we maintain a reference file containing catalogues from over seven hundred European manufacturers. Our profit on importation orders from specified makers is confined to the discount allowed us by the maker and in no case do we advance the factory prices except by the addition of U. S. Customs duty in duty paid importations, and in all importations by the addition of transportation charges. We mention below a few European makers of reputation whose catalogues are regularly supplied us for distribution.

- Eugen Albrecht**, Physiological Apparatus after Hürthle, etc.  
**Montaudon**, Auzoux Models of Human and Comparative Anatomy.  
**R. Brendel**, Botanical and Zoological Models.  
**Cambridge Scientific Instrument Co.**, Electrical Measuring Instruments, Duddell Oscillograph, Einthoven Galvanometers, Electro-Cardiographic Apparatus, etc.  
**Deyrolle et Fils**, Models of Human and Comparative Anatomy, and other Anatomical Preparations.  
**Dr. Th. Edelmann**, Electrical Measuring Instruments, Einthoven Galvanometers, Electro-Cardiographic Apparatus.  
**Ferdinand Ernecke**, General Physical Apparatus.  
**R. Fuess**, Petrographical Microscopes, Goniometers, Refractometers, Meteorological Apparatus, Precision Thermometers, etc.  
**Robert Goetze**, Apparatus for Physical Chemistry and Precision Thermometers.  
**Greiner & Friedrichs**, Fine graduated and lamp-blown Chemical Glassware.  
**Dr. G. Grübler & Co.**, Stains for Biological Work.  
**Emil Gundelach**, Fine Chemical Glassware, Vacuum Tubes, etc.  
**Hartmann & Braun**, Electrical Measuring Instruments.  
**Chas. Hearson & Co., Ltd.**, Bacteriological Incubators and Paraffine Baths.  
**Adam Hilger, Ltd.**, Wavelength Spectrometers and Spectrographs, Refractometers, Interferometers, Goniometers, Spectrophotometers and Diffraction Gratings.  
**R. Jung**, Physiological Apparatus, Microtomes, etc.  
**C. A. F. Kahlbaum**, High Grade Chemicals and Reagents.  
**Max Kohl**, Physical Apparatus. Comprehensive catalogue of 882 pp.  
**Fritz Köhler**, Apparatus for Physical, Electro- and Photo-Chemistry.  
**Königliche Porzellan-Manufaktur**, Porcelain Ware for laboratory and manufacturing purposes.  
**Dr. F. Krantz**, Crystal Models and Mineralogical Preparations and Collections.  
**A. Krüss**, Spectroscopes, Spectrometers, Spectrophotometers, Colorimeters, etc.  
**F. & M. Lautenschlaeger**, Bacteriological and General Laboratory Apparatus. A large general catalogue of 743 pages.  
**E. Leybold's Nach.**, Physical Apparatus, Gaede Vacuum Pump, Gaede Molecular Pump, etc.  
**C. F. Palmer & Co.**, Physiological Apparatus.  
**Ph. Pellin**, Polariscopes, Colorimeters, Spectroscopes, Le Chatelier Metallurgical Microscope, etc.  
**Wilh. Petzold**, Physiological Apparatus.  
**Pulsometer Engineering Co.**, Geryk Vacuum Pump.  
**W. G. Pye & Co.**, Physical Apparatus.  
**Carl Reichert**, Polariscopes, Metallurgical Microscopes, etc.  
**Max Rinck**, Physiological Apparatus.  
**Alb. Rueprecht & Sohn**, Analytical Balances and Weights.  
**Gebr. Ruhstrat**, Laboratory Resistances.  
**F. Sartorius**, Analytical Balances, Microtomes, etc.  
**Schmidt & Haensch**, Spectroscopes, Spectrometers, Polariscopes, Photometers, Spectrophotometers, Colorimeters, etc.  
**Schott & Gen.**, Jena Laboratory Glassware.  
**Dr. Siebert & Kuhn**, Fine Thermometers.  
**Société Gènevoise**, Optical Measuring Instruments, Dividing Engines, Physical Apparatus.  
**Spindler & Hoyer**, Apparatus for Physiology and Psychology. Radio-Chemistry, etc.  
**Stegg & Reuter**, Mineral Preparations.  
**Tramond**, Models of Human and Comparative Anatomy, Osteological Preparations.  
**Otto Wolff**, Electrical Measuring Instruments, Designs of the Physikalisch-Technische Reichsanstalt.  
**Carl Zeiss**, Microscopes and Optical Measuring Instruments (See Special Announcement page IV).  
**E. Zimmerman**, Apparatus for Physiology and Psychology.

A very complete index is to be found on page 558 of the catalogue.

The arrangement of this catalogue is based upon convenience rather than consistency. All systematic plans lead if completely carried out to inconvenient location of certain articles. The general arrangement is alphabetical but in a number of instances the group system has been followed as a more convenient arrangement.

## GROUP ARRANGEMENT

20000.	Absorption Blocks, of paper purified with acids and used in calorimetric determinations to absorb difficult combustible liquids.			
	Height, mm.	15	13	16
	Diameter, mm.	7	10	14
	Per 100, net.	1.10	1.10	1.10
20004.	Acetometer, Otto. For determining the percentage of acetic acid in vinegar, on wooden base.			75
20008.	Acid Basins, of porcelain.			
	Diameter, mm.	115	130	155
	Each.	1.10	1.25	1.50
20012.	Acid Pitchers, of stoneware.			
	Capacity, cc.	1000	2000	4000
	Each.	.30	.35	.60
20016.	Acid Pump, for drawing acids, ammonia, etc., from carboys and large containers. A foot power blower or other form of blast apparatus is necessary for use in connection with it.			5.00
20020.	Acid Pump, with force pump attached. Suitable for bottles and carboys with inside diameter of mouth $1\frac{1}{4}$ to $2\frac{3}{8}$ inches.			5.00
20024.	Adapters, curved; light wall, lamp blown; for connecting retorts with receivers.			
	Length, mm.	130	150	200
	Diameter at large end, mm.	22	30	40
	Each.	.20	.30	.35
20028.	Adapters, straight; light wall, lamp blown.			
	Length, mm.	130	150	200
	Diameter at large end, mm.	22	30	40
	Each.	.20	.30	.35
20032.	Air Pump, Vacuum and Pressure, of brass, nickel plated. Mounted on oak base, with chamber 16 inches long by $2\frac{1}{4}$ inches in diameter. With two valves and two nipples for inlet and outlet of air.			8.00
20036.	Air Pump, "Geryk" No. 0, fast running type, with new patented improvements, with $1\frac{1}{2}$ inch cylinder by 5 inch stroke, with 7 inch plate and vacuum gauge; giving a vacuum to .3 mm less than perfect vacuum as measured by the MacLeod Gauge. All the ordinary phenomena can be produced, such as the freezing of water by evaporation, and other school work.			
	Duty Free.	30.00	Duty Paid.	36.00

No. 20040

No. 20044

20040. **Air Pump, "Geryk" Duplex No. 1.** With 2 inch cylinder by 5 inch stroke. Specially designed for the rapid production of high vacua. The vacuum obtained is comparable with that given by a Sprengel pump and is very much more rapid. Is suitable for exhausting incandescent lamps and Roentgen tubes.

Duty Free.....	97.65
----------------	-------

Duty Paid.....	117.20
----------------	--------

20044. **Air Pump, "Geryk" Duplex**; for power driving, fast running type, with new patented improvements. This pump is specially designed for the production of high vacua in incandescent lamp factories and is widely used for this purpose both in the U. S. and Europe. Requires less power for operation than any other form of vacuum pump. Supplied with a special vacuum stopcock, fitted with screw plug for regulating admission of air, at extra cost as indicated.

Screen plug for regulating admission of air, at extra cost as indicated.				
Diameter of cylinder, inches.....	$\frac{2}{5}$	$\frac{2\frac{1}{2}}{5}$	$\frac{3}{7}$	$\frac{3\frac{1}{2}}{7}$

No. 20052

No. 20052

20052. **Air Pump, Gaede High Vacuum.** Consists of an iron chamber half filled with mercury in which a porcelain drum rotates. This pump will exhaust a 6 liter flask after it has been brought down to a vacuum of 10 mm by preliminary exhaust (by means of a filter pump or preferably with Gaede's Rotary Pump No. 20056) to .004 mm in 5 minutes, to .0001 mm in 10 minutes and to .00001 mm in 15 minutes. See *Gaede, Physikalische Zeitschrift, 1907, VIII, p. 852*. Complete with new patented valve drum and glass connection, but without mercury.

No. 20060

20056. **Air Pump, Gaede Rotary.** Particularly recommended for use as an auxiliary pump in creating the preliminary vacuum necessary with the Gaede High Vacuum Pump. This pump works dry by means of a valve placed eccentrically in a metallic case. This pump is equally suitable for the production of blast as well as vacuum and on this account has wide application in laboratory work. It will evacuate a 6 liter flask from 1 atmosphere to 3 mm in 1 minute, to .04 mm in 2 minutes, to .15 mm in 3 minutes, to .035 mm in 8 minutes, to .012 mm in 10 minutes and to .006 mm in 15 minutes. As a pressure pump it will give a pressure of 1 atmosphere above the pressure of the atmosphere in which it is operated. For hand driving.

Duty Free.....	300.00	330.00
Duty Paid.....	400.00	440.00

No. 20068

No. 20068

20068. **Air Pump, Gaede Molecular.** A new high vacuum pump which removes all vapors as well as gases. Will exhaust a 6 liter flask starting with a pressure of 10 mm and using the Gaede Rotary Pump as an auxiliary, to .0003 mm in 2 minutes, to .00001 mm in 3 minutes and to .000002 mm in 4 minutes. In other words, this pump will exhaust to the same degree of vacuum in 3 minutes that the Gaede High Vacuum Pump reaches in 15 minutes. The Molecular Pump is built on an entirely new plan, being without piston of any kind and the communication between the receiver and the primary vacuum through the grooves and channels of the pump is at no time closed. The movement of the rotor acts on the movement of the gas molecules in the grooves of the rotor or the casing and produces a region containing fewer molecules, i.e., a vacuum, at the suction nozzle of the pump. This pump requires an electric motor with a speed of 3000 r. p. m. and a pulley 135 mm in diameter to give the required speed, i.e., 8000 r.p.m. Pump only, without motor.

No. 20072

No. 20076

20072. Air Pump, Gaede Molecular with Electric Motor. Same as 20068 but with electric motor and starting rheostat mounted on same base with pump. Voltage must be specified in ordering.
- |              |        |             |
|--------------|--------|-------------|
| Current..... | Direct | Alternating |
|--------------|--------|-------------|

Duty Free.....	300.00	330.00
Duty Paid.....	400.00	440.00

Note.—The Gaede Molecular Pump should always be backed by another pump which will exhaust into the atmosphere in order to secure maximum effect. In practical work in the manufacture of Roentgen tubes the Gaede pump is frequently backed by such a pump as the McNeill Rotary, which is in turn backed by a piston pump such as the Geryk, such a series being very much more efficient and rapid when so arranged.

20076. MacLeod's Vacuum Gauge for use with Gaede and other apparatus.

No. 20080

No. 20082

20080. Air Pump, Crowell Rotary Type O-D, will exhaust to a vacuum of from 29 to 30 inches of mercury and can be used either totally immersed in oil in the oil box or without the oil box as shown. The capacity of this pump is 2 cubic feet of free air per minute. The inlet and outlet tubes are tapped for  $\frac{1}{2}$ -inch pipe size and about  $\frac{1}{4}$  h. p. is required for operation; weight with the oil box 50 lbs., without oil box 20 lbs. As used in many college laboratories and in the Nutrition Laboratory of the Carnegie Institution of Washington. Can be used for blast as well as suction. Complete with oil box..... 45.00
20082. Air Pump, Crowell Rotary Type O-D, as above, but without oil box..... 35.00

No. 20092

No. 20084

No. 20088

- 20084. Air Pump and Compressor, Crowell Rotary.** Exhausts under ordinary conditions of atmosphere to a vacuum of 29 or 30 inches of mercury. Can be used for pressure or blast up to 25 lbs. to the square inch. There are no valves, springs, gears or unbalanced parts and the direction of rotation is not alternated when changed from use as a compressor to a vacuum pump. Very satisfactory for supplying suction throughout a laboratory for filtrations, etc., or air pressure for blast lamps. For illustration of receiver, see page 73. In ordering please state whether receiver is to be included

- 20088. Air Pump, McNeill Rotary, for High Vacuum.** When properly backed by a pump exhausting into the atmosphere produces a vacuum of .0003 mm and under favorable circumstances will do even better. This pump is widely used in the manufacture of tungsten and other electric lamps and, as it will not exhaust directly into the atmosphere, must be backed by a pump producing a vacuum of at least 1 mm of mercury. In lamp factories a Geryk pump is frequently used for this purpose. The McNeill pump is also used in the manufacture of Roentgen tubes, etc., as an auxiliary to the Gaede Molecular Pump, in which combination it must also be backed by a pump exhausting into the atmosphere

**20090. Special Oil, per gallon.** 100.00

**Note**—Five gallons of the special Oil should be purchased with each Pump. 1.00

- 20092. Air Pump Plates, on tripod base, with heavy plate glass top and two-way stopcock.** Without bell jar. For Bell Jars suitable for use with these plates see No. 21920.

20128. **Anaerobic Culture Apparatus, Küster**, consisting of a glass absorption capsule, 120 mm in diameter by 15 mm high, entirely closed over with the exception of a small hole in the top. Absorbent material such as pyrogallie acid, etc., is placed in the dish to a depth of about 5 mm. The Petri dish containing the culture is then placed over the opening in an inverted position and sealed down with plasticine. When the usual 100 mm Petri dishes are used, about 150 cc of air must be absorbed by the acid. Two parts of sodium hydrosulphite or pyrogallie acid are dissolved in 20 parts of distilled water and poured into the absorption capsule and, just before placing the Petri dish above the capsule, 20 cc. of a 10% solution of potassium hydroxide is added. Absorption takes place very rapidly because of the large absorbing surface and may be hastened by slight shaking. See *Centralblatt f. Bakt. Referate* 57 Bd. No. 14-22, p. 269-271. Absorption capsule only..... .40
- Anaerobic Culture Apparatus, Lentz**, consisting of a 125 mm square glass plate and a cellulose absorbent ring. The Petri dish containing the culture is placed in an inverted position over the cellulose ring after same has been soaked in pyrogallie acid, the dish being sealed to the glass plate by means of plasticine. Immediately before using the cellulose ring should be moistened with 1% potassium hydroxide. The rings are 85 mm in diameter, being intended for convenient use with a 100 mm Petri dish. See *Centralblatt f. Bakt.*, 1910, Bd. 53, 1 & 3.
20136. **Cellulose Rings**, as described, per box of 10..... .2.00
20140. **Glass Plates**, 125 mm square. Each..... .06
20144. **Plasticine**, in conveniently shaped rods. Per box of 25 rods..... .1.25
20148. **Anaerobic Culture Apparatus, McLeod**, consisting of two parts, a porcelain capsule to contain the pyrogallie acid and caustic soda solutions and a special Petri dish which has its free margin turned inwards and upwards. The porcelain dish is a hollow chamber. It is bisected in the lower two-thirds of its depth by a vertical partition and there is a circular aperture in the center of its upper surface. Around the margin of the upper surface is a small groove which is filled with plasticine. In using the apparatus 5 cc to 7 cc of a 15% solution of pyrogallie acid is run into the compartment of the chamber marked A in Fig. 2. This can most easily be done with a large pipette, 5 cc to 7 cc of a 10% solution of caustic potash is then introduced into compartment B. The Petri dish is then pressed down into the plasticine in the groove and the plasticine is pushed up against its outer margin to insure the proper sealing of the chamber. As soon as the access of fresh oxygen from without has thus been cut off, a mixture of the pyrogallie acid and caustic potash solutions is effected by tilting the porcelain dish so that the solutions run over the partition at the point K in Fig. 2 and react with one another. The Petri dish is shown in Fig. 1 ready for use in contact with the plasticine. Any condensation water which may form is retained in the groove R. See *Journal of Pathology and Bacteriology (British)*, Vol. 4, April 1913, p. 454. Complete with both porcelain dish and special Petri dish..... .1.25
20152. **Porcelain Capsule**, only..... .1.00
20156. **Special Petri Dish**, only..... .25
- Note.—For Plasticine see No. 20144.
20160. **Anaerobic Culture Apparatus, Novy**, with removable top permitting the use of Petri dishes. For use by either gas or pyrogallate methods. The two sections have wide ground flanges which, with the rubber bands, form an air-tight connection when held in place by clamps. The lower section is 150 mm high by 140 mm in diameter. Glass parts only, with rubber band but without metal clamps..... .4.50
20164. **Anaerobic Culture Apparatus, Novy**, same as No. 20160 but with clamps..... .5.00
20168. “ “ “ improved form, for the culture of anaerobic bacteria by either vacuum, gas or pyrogallate methods. With stopcock supported horizontally by glass tubes above the regular stopper, relieving the large stopper from pressure and thus permitting the use of the vacuum method. Otherwise identical with No. 20160. Glass parts only, with rubber band but without metal clamps..... .5.50
20172. **Anaerobic Culture Apparatus, Novy**, same as No. 20168 but with clamps..... .6.00

# ASPHALT AND TAR TESTING APPARATUS

20332. **Penetrometer, Standard, New York Testing Laboratory Type**, for measuring the depth of penetration of a standard needle into the material to be tested at 77° F. or 25° C. in 5 seconds of time under a 100 gram weight; with standard clock reading in  $\frac{1}{2}$  seconds and dial graduated to  $\frac{1}{16}$  mm. A set of adjustable weights is provided permitting the use of either 50 or 100 gram loads in addition to the standard of 100 grams. See "The Modern Asphalt Pavement"..... 60.00
20336. **Penetrometer, Miniature**, exactly similar to the above but one-half the size and specially designed for engineers' portable use in making comparative tests, without clock..... 25.00
20340. **Drying Oven, New York Testing Laboratory Type**, for uniform temperatures, with fan in bottom and 10 inch ring burner; of copper with asbestos jacket, 20 inches high by 11 inches in diameter 35.00
20344. **Drying Oven**, same as above, but of Russia iron..... 25.00
20348. **Asphalt Flow Plate and Mold**, consisting of 3 plates each with four corrugations or 2 plates each with six corrugations and one mold. Type of plate must be specified in ordering..... 5.00
20352. **Asphalt Viscosimeter, New York Testing Laboratory Type**, consisting of a concave aluminum float with three standardized brass plugs; for testing the consistency or the fluidity of bituminous binders at 90° F..... 7.25
- Note** For testing the viscosity of bituminous compounds such as oils, or of asphaltic material at high temperatures, i. e., about 200° F., the Engler Viscosimeter is mostly used. See Oil Testing Apparatus.
20356. **Adhesion Machine, Kirschbraun-Sargent**, a double scale dynamometer graduated in grams up to 250 grams and in ounces up to 8 ounces. Two sample cups are provided, one for the standard sample and one for the unknown. As used in the Chicago Paving Laboratories..... 20.00
20360. **Briquette Mould for Asphalt**..... 4.00
20364. **Cubical Brass Mould**, with plate for melting point determination,  $\frac{1}{2}$  inch..... 4.50
20368. **Bitumen Holder, Draper model**..... 3.00
20372. **Cementation and Ductility Machine, Kirschbraun**, for determining the relative cementation values of asphalt cements. May also be used for ductility and elongation tests under various conditions of temperature and speed..... 100.00
20376. **Crucible, Royal Berlin Porcelain**, of special shape, with large filtering surface, as used in the determination of soluble bitumen. Height 24 mm, width at top 45 mm, width at bottom 35 mm.... .50

No. 20384

**20380. Ductility Machine, Smith**, for hand power; made entirely of metal with box heavily plated and enamel painted, with right and left screws, slip nuts for carriage, etc., for tests up to 100 cm in length.

The test is conducted at a standard speed of 5 cm per minute at a temperature of 77° F. **135.00**

**20384. Ductility Machine, Smith**, as above but with directly connected, direct current electric motor. **175.00**

**20388. Ductility Machine, Electric Motor Drive, Chew Patent**, constructed entirely of metal. All exposed parts covered by water are made of brass or bronze. Warping and rusting are entirely prevented. The mechanism is strong, simple, durable and easily operated. The operation is smooth, uniform and accurate and reduces the personal equation of the operator to a minimum. This machine is adapted to testing all types of bituminous material which can be cast in moulds.

**Tank**—The tank or box in which the test specimens are immersed is made of iron heavily lined with white porcelain, which makes it possible to see at all times the finest thread to which the specimen may be pulled. It is of such width that three specimens may be tested simultaneously.

**Moulds**—Moulds for test specimens are of bronze, all parts being accurately machined and fitted. They are of standard dimension with a minimum cross section of one square centimeter. A set of three moulds is furnished with each machine. Additional sets may be procured if desired.

**Carriage**—The carriage is triangular in shape, specially designed to allow the operator freedom of access to the platform and posts which carry the moulds. It is supported on two tracks, one of which is slotted for its entire length and serves as a guide, thus insuring a perfect unidirectional pull free from chatter or vibration. The carriage is operated by a single heavy screw shaft placed close to the side of the box so as not to obstruct the manipulation of test specimens. The carriage may at any time be engaged or disengaged from the screw shaft by means of a small hand lever, which operates a two piece nut, even when the screw shaft is turning.

**Drive**—The screw shaft is operated by heavy bronze gears connected direct to the motor at one end of the tank by a worm drive. Either D.C. or A.C. electric motor is furnished as desired. The former is controlled by a rheostat; the latter is of the variable speed type. The motor is substantially mounted so as to reduce the vibration to a minimum.

**Speed Indicator**—The speed at which the test specimen is pulled apart is accurately indicated in centimeters per minute by the Chew Speed Indicator which is attached to the operating shaft of the motor. This is a simple and unique device which makes it possible to operate and regulate the machine without recourse to any other timing device. It constitutes a novel and particularly desirable addition to the older type of machine. Once adjusted it is always reliable and absolutely prevents the possibility of error due to unknown variations in flow of current during the test. Any such variation is at once detected by the speed indicator and may be instantly corrected by adjusting the rheostat lever so that the speed indicator registers the exact speed desired.

**Operation**—After the test specimen has been brought to the desired temperature and attached to posts on carriage and platform, the carriage is disengaged from the screw shaft. The motor is then started and its speed regulated until the speed indicator registers exactly five centimeters per minute. The carriage is then engaged with the screw shaft while in motion. At the conclusion of the test the carriage is disengaged from the screw shaft and slid back to its original position.

Full directions for making the ductility test are furnished with every machine. When placing order, be sure to state the type of current for which motor should be furnished. Price on application.

**20392. Extractor, New York Testing Laboratory Type**, for analysis of paving mixtures containing broken stone.

The bituminous mixture should be warmed until it can be readily broken apart by hand, without fracturing any of the stony particles; 500 grams of the disintegrated mixture should be packed as tightly as possible in the wire basket and then covered with a disc of cotton or felt of  $\frac{1}{2}$  inch to  $\frac{3}{4}$  inch thickness; 175 to 200 cc of carbon disulphide, carbon tetrachloride, chloroform or benzole is placed in the inside vessel in which the wire basket is suspended. Cool water should be circulated through the inverted cone condenser which is also the cover of the apparatus and not intended to fit tight. A 16 c. p. carbon filament incandescent lamp is the source of heat. A 500 gram sample of the mixture should extract clean with carbon disulphide in about 3 hours. From 200 to 300 grams of asphalt block or Topeka type mixture is a sufficiently large sample for that type of mixture. After extraction, the solvent and matter removed from the sample during the analysis should be burnt to recover any fine mineral particles which may have passed into the extract. These extractors are made entirely of metal. Each, complete, but without incandescent lamp. **30.00**

No. 20392

20396. Hydrometer, Sommer's Patent, for determining the specific gravity of asphalt, graduated from 0.85 to 1.3° at 25° C., as recommended by the Committee of the American Society of Civil Engineers. Outfit with brass receptacle and fittings, with instructions for use..... 10.00
20400. Hydrometer, same as No. 20396 but graduated from 0.950 to 1.100 ..... 10.00

No. 20404

No. 20408

20404. Dulin Rotarex, Large Model with Universal Motor, for samples of 500 or 1000 grams. The advantage of using such a large sample will be readily apparent as it permits running samples which contain a large mineral aggregate as found in asphaltic, concrete or bitulithic pavements. It is also advantageous in securing a considerable amount of bitumen in the pavement which can be used for the penetration test. The machine is directly mounted on top of a universal vertical motor which is entirely enclosed in a cast-iron frame and operates on either 110 volts, 60 cycles, alternating current, or direct current 110 volts. The motor is fitted with a speed control, and may be used on 220 volt circuit with suitable resistance. The bowl in which the sample is placed is of aluminum with a cover of aluminum. The outside bowl or shell is of copper and fitted with a two-piece cover, the smaller of which is removed when adding additional solvent. All of the special features of the smaller type No. 20408 are incorporated in this machine. .... 125.00
20408. Dulin Rotarex, Small Model, for determining the mineral aggregate in bitumen pavements. The asphalt receptacle of aluminum has a removable cover but solvent can be added as required without removing same. The solvent used is non-inflammable. Samples of 10, 25 or 50 grams may be run with accurate results. The motor used may be connected to any 110 volt direct or alternating current (except 25 cycles or less). Time for extraction is 5 minutes, leaving the mineral aggregate perfectly dry so that grades may be determined. .... 60.00

**APPARATUS FOR TESTING COAL TAR AND REFINED TARs, OILS AND PITCHES DERIVED THEREFROM** as adopted in the Standard Methods of the Barrett Manufacturing Company, New York. See *Journal of Industrial and Engineering Chemistry*, April, 1911, March, 1913, and May, 1914. The apparatus, listed below, is only the special apparatus required for these tests. The regular apparatus, such as tripods, burners, clamps, etc., are to be found under their respective headings throughout the catalogue. Complete lists of both the special and regular stock apparatus required for the various tests will be sent upon request.

	<b>Special Apparatus required for Water in Tar Test</b>		
20412.	Copper Still, with steel clamps, inside dimensions 6 x 3½ inches, with six paper gaskets.....	13.25

## BACTERIOLOGICAL, HISTOLOGICAL AND SEROLOGICAL APPARATUS

**AMERICAN STANDARD INCUBATORS** are built under our personal direction in the first sheet metal factory in the U. S. to take up (some twenty years ago) the manufacture of sheet metal apparatus for bacteriological work, and they embody twenty years' experience in both the manufacture and selling of bacteriological apparatus. The Incubators are made of heavy polished copper covered with a water-proof, non-conducting material. All are of the latest triple wall construction, which provides space for both warm air and water. The walls of the water jacket are thoroughly reinforced to prevent bulging, due to lateral pressure of the water, a defect very common in low priced utensils. The bottoms are conical in construction to evenly distribute heat, and to evenly heat the water spaces on all sides, by a circulation of hot air, thus giving equal and uniform temperature. The products of combustion and the hot air pass out by a side ventilator on top of the incubator. A glass water gauge with stopcock which shuts off the water from the gauge in case the tube is broken, is provided. A metallic tube through the air jacket connects the thermo-regulator with the burner and all burners furnished with incubators connect with this pipe by means of flexible metallic tubing instead of the rubber tubing previously used. This is an important feature and greatly minimizes the danger from fire. The closed in bases are of sheet-iron properly ventilated and furnished with a mica window for observing the flame. All incubators are furnished with carefully prepared instructions for installing and adjustment.

Any of our American Standard Incubators, whether for gas, oil or electric heating, can be used as paraffine embedding ovens at temperatures up to 70° C. In the cases of oil and electric heating this specification should be given at the time of ordering to insure proper adjustment of regulators.

American Standard Incubator  
with  
Equipment Dd, for Electric Heating

This electric heating and temperature control operates equally well on direct or alternating current. Electric heating units can at any time be removed and incubator operated for gas heating. There are no exposed terminals and apparatus operates directly on the circuit. Before shipment each incubator is tested to maintain a constant temperature. In ordering it is necessary to state voltage and whether for direct or alternating current.

American Standard Incubator  
with  
Equipment Cc, for Oil Heating

This device for oil heating incubators is entirely new and is much simpler in operation and control than anything heretofore offered. The regulator is on the principle of the Roux metallic which directly operates the damper over the lamp, permitting either the escape or the utilization of the heat. Under proper conditions will regulate to 1/2°.

**EQUIPMENT Aa** consists of Roux bimetallic thermo-regulator, incubator thermometer, and Koch safety burner with flexible metallic tubing attached.

**EQUIPMENT Cc** consists of oil lamp heater, Roux bimetallic thermo-regulator and incubator thermometer.

**EQUIPMENT Dd** consists of incubator thermometer, and electric heating units with electric thermo-regulator.

No. 20760

**HEARSON INCUBATORS.** These incubators consist of a water-jacketed chamber made of stout copper surrounded by insulating material and the whole encased in wood. They are provided with an inner door of glass and an outer one of panelled wood. In the two larger sizes the doors are double. The distinctive feature is the temperature control by means of a **metallic, hermetically sealed capsule** which contains a few drops of liquid having a boiling point at or near the temperature which it is desired to maintain in the heating chamber. The regulation is established by the expansion of this capsule owing to the boiling of its contents which provides the motive force for operating the control lever. This expansion takes place only at the predetermined temperature. The lever will only be acted upon when the critical temperature is reached, no sensible effect being produced at even one degree below that at which the capsule is desired to act. A sliding weight compensates for slight barometric variations and, in addition, controls within certain limits the boiling point of the capsule so that a range of  $8^{\circ}\text{C}$ . is possible with any particular capsule and the total range by means of these capsules is from  $16^{\circ}\text{C}$ . to  $175^{\circ}\text{C}$ .

This system of temperature control applies equally well to gas, oil or electric heating and also to the control of the low temperature incubator for gelatine cultures operating at  $20^{\circ}\text{C}$ .

These incubators, although comparatively new in the United States, have been used for a number of years with great success in leading European bacteriological laboratories, particularly those of the Pasteur Institute in Paris. Instructions for operating are furnished with each incubator.

**HEARSON INCUBATORS FOR GAS HEATING.** The Excelsior Gas Valve used in the control of incubators heated by gas and operates as follows:—

A is the inlet for gas; C the outlet to burner; BD a lever pivoted to standards at G and acted upon by the capsule, through the needle which enters the socket below the screw P. The construction of the acting portion of this valve is such that whenever the end B of the lever BD presses on the disc below the end B, the main supply of gas is entirely cut off. At such times, however, a very small quantity of gas passes from A to C, through an aperture inside the valve, the size of which aperture can be adjusted by the screw needle S, hence the gas flame below the incubator is never extinguished.

The expansion of the capsule, owing to the boiling of its contents, provides the motive force for acting upon the lever BD.

Changes in the atmospheric pressure, tend to make the temperature fluctuate about 1° F. on either side of the normal, if observations be taken extending over considerable intervals of time. To compensate for these variations, a sliding weight runs on the lever-rod **D**. It also retards within certain limits, the boiling point of the capsule, and thus adjusts the temperature at which the capsule shall expand several degrees above that at which (with the weight to the left) it first commenced to act.

In actual practice it is found that the temperature can be maintained within half a degree without re-adjustment of any part, for months together, and this, too, in spite of great changes of gas pressure, and of air temperature in the room in which the apparatus is working.

No. 20740

**Hearson Incubators for Gas Heating**, with capsule adjusted to 37½° C. unless otherwise ordered, with thermometer, suitable burner with two chimneys, 4 ft. of flexible metallic tubing, etc.

Note—Nos. 20728, 20732, 20736 and 20740 are usually in stock for immediate delivery.

#### HEARSON INCUBATORS FOR OIL HEATING.

The Patent Capsule control lends itself particularly to incubators heated by an oil lamp. The heat from the lamp passes through a flue across the bottom of the incubator and returns again to the lamp by another flue parallel with the first and is then conducted to the open air by a second chimney as shown in illustration. When the degree of heat reached in the chamber is sufficient to expand the capsule the lever will rise and lift the damper from the lamp chimney and after a short period the damper will be found to hang steady in one position and the temperature remain constant. These utensils may be adjusted for higher temperatures for use as paraffine embedding ovens when so ordered.

20812. Size 24

20812. Size 40

**INCUBATORS, FREAS' PATENT ELECTRIC.** These incubators have no water or water jacket and the adjustment is set at the temperature required by simply turning a milled head.

**Construction**—The incubators are constructed of heavy asbestos wood, with cast aluminum door and door frame. This asbestos wood is absolutely fire-proof and possesses unusual insulating qualities. This latter quality and the large thermal capacity of the body of the incubator assist the maintenance of an even temperature throughout the chamber; the air space between the inner and outer walls is filled with insulating material, which results in a very low heat loss, thereby reducing the current consumption to a minimum. The interior is fitted with aluminum racks, allowing the perforated metal shelves to be placed at any desired height. There is provided an inner door of heavy glass, fitted in an aluminum frame cushioned with felt to exclude air, thus permitting inspection of the chamber without opening the door and cooling the incubating chamber. An opening through the top of the incubator to the chamber is provided for a thermometer.

**Regulation**—The regulation device is made entirely of metal, substantially built, so that it is practically impossible for it to get out of order. Its action depends upon the expansion of a metal tube running through the chamber from top to bottom, operating a lever which "makes" and "breaks" a contact, with proper means to prevent arcing. The lever is extended to serve as an indicator, operating up and down the graduated temperature scale on the outside of the incubator. The indicator is moved to the temperature desired by turning the milled-head screw at the bottom of the scale. The regulation is sharp and accurate to a fraction of a degree and remains so indefinitely.

**Temperature Range**—The temperature range of the incubator is from a degree or so above the surrounding air temperature to 60° C.; the regulating device operates just as satisfactorily at lower as at higher temperatures.

**Heating Element**—The heating element consists of a wire wound resistance plate situated at the bottom of the incubator. While there may be no need to remove it, it can be very easily taken out if desired. The plate is wound for 75 watts, about 50 watts being required to maintain a temperature of 37½°.

No. 20816

Arrangement of Hearson Electric Incubating Room Temperature Control, showing Control Capsule, Automatic Switch and Blow-out

#### Directions for Constructing an Incubating Room and for Installing Electric Temperature Control.

The room should be constructed of brickwork 9 inches thick and perfectly square inside, 6 x 6 ft. and about 7 ft. high. There should not be any windows, but two doors, the outer door being closed before opening the inner door of the chamber. These doors should be made of white pine 2 inches thick and the walls glazed or covered with parian cement and the floor and ceiling insulated with slag wool. A 9-inch ventilator should be fixed near the ceiling and nine 1-inch holes in the bottom of each door.

Attach the Automatic Switch and blow out on marble base outside the room to be heated, in a convenient position and bring the main supply to this switch and connect at the back of switch base. Place the four Radiators in the incubating room, one on each side between the first two shelves (not on the floor) and carry wires from the Automatic Switch to each Radiator in parallel and connect to the terminals indicated. Place the Capsule Switch with lamp about the height of the third shelf (not against the wall) and carry wires from this to the Automatic Blow-out Switch and connect to terminals indicated.

The installation is then complete and the current may be turned on. The Radiators will heat up and continue to do so until the Capsule expands and interrupts the current, when the magnetic coils will drop the armature and the current will cease to flow to the Radiators which will cool down until the Capsule again collapses when the current will be again switched on. This will continue automatically.

To increase the temperature screw down the milled head screw on Capsule Switch a turn or two at a time; to decrease the temperature reverse the process. See that the carbons on the Automatic Switch touch each other perfectly, otherwise a spark of eruption will occur and cause rapid deterioration. There must be no sparking except at the moment of breaking contact.

**20816. Incubating Room Temperature Control for Electric Heating, Hearson,** as above described. When the capsule is collapsed the lever arm is kept in position by the solenoid, and the current is free to pass to the heaters. Upon the expansion of the capsule contact is broken, the solenoid ceases to act, the lever arm drops suddenly and the current to the radiators is checked and by means of the electric blow-out, the sparking is reduced to a minimum. The current remains cut off until the temperature of the room is so reduced as to allow the capsule to contract and contact again be made. The outfit consists of capsule switch, four radiators and blow-out panel switch and is based on keeping a room 6 x 6 x 7 ft. at a constant temperature. Larger rooms must be supplied with additional radiators. Price of outfit for either direct or alternating current.

Duty Free..... 94.50

Duty Paid..... 141.75

No. 20820

- 20820. Incubating Room Temperature Control for Gas Heating.** With a well insulated room a uniform temperature can be maintained within 2° with the use of the gas valve regulator and a suitable gas stove. It is advisable to arrange ventilation in both the lower and upper parts of the room for the purpose of temperature equalization and avoidance of smell from the products of combustion and gases of fermentation, etc. The regulator may be placed at any convenient position, usually near the door. Price is for gas valve with capsule only..... **13.50**

No. 20821

- 20824. Incubator, Hearson New Compartment.** For either high or low temperatures. Consisting of nine compartments of copper, water-jacketed and insulated, each compartment being 7 x 8 x 6 inches. Temperature may be adjusted from 25-32° C., 32-40° C., 40-47° C., or any other pre-determined range. Each compartment is fitted with a Hearson control capsule which automatically controls the entry of warm water from the heating tank either into the water jacket surrounding each compartment or to the waste. A difference in temperature of less than a degree in the compartment suffices to change the flow of warm water. A control capsule is connected with the heating tank also so that the supply of warm water is constantly under control. All the compartments may be operated independently of one another.

Duty Free..... **\$345.15** , Duty Paid..... **\$517.75**

No. 20826

- 20828. Incubator, Embryological, Hearson Electric,** operating on the same principle as the Hearson bacteriological incubators previously described, capacity 50 eggs. This is a very much more convenient apparatus than the usual chicken incubator used for embryological purposes. Voltage must be specified in ordering.

Duty Free..... **37.80**  
Duty Paid..... **56.70**

No. 20832

20832. Incubator, Compartment form, for different temperatures in the various compartments between 24° and 60° C. Each compartment is 30 x 20 x 25 cm. With both glass and metal doors. With burner, thermo-regulator, etc., but without thermometer. With ten compartments as shown in illustration.

No. 20848

No. 20864

**LOW TEMPERATURE INCUBATOR, HEARSON MODEL C**, for operation with a constant flow of water. Most of the low temperature incubators can only be worked successfully as long as the external air is  $10^{\circ}$  below the temperature required in the incubating chamber, and the expedient sometimes resorted to of running cold water through them to keep the temperature down can, in summer time, be adopted with advantage, but the results are not altogether satisfactory, cultures being frequently spoiled by an unexpectedly warm day or night.

In summer, therefore, or in hot climates, cultivation of gelatine can only be considered safe in an incubator using ice, and the special feature of this incubator is that it will automatically remain constant at  $20^{\circ}$  Cent., or any other predetermined temperature, using only the theoretical amount of ice requisite to obtain this result, even though the external air may be 30 or 40 degrees above the temperature desired in the interior.

With capsule adjusted to  $10^{\circ}$  C. unless otherwise ordered, with thermometer, ice funnel, gas fittings and 4 ft. of flexible metallic tubing (or, if for oil lamp, 2 chimneys and 1 yd. wick) and packing. With suitable burner for either oil or gas heating. Please specify when ordering.

		Inside Measurements	Duty Free	Duty Paid

20856.	" " " " " "	20 x 20 x 24 "	165.60	248.40

**NOTE.**—This Low Temperature Incubator is one of the most satisfactory bacteriological utensils we have ever sold and it has been supplied by us to leading Universities, City and State Boards of Health and U. S. Government laboratories. All of these users are unanimous in reporting satisfactory service.

**LOW TEMPERATURE ELECTRIC INCUBATOR, HEARSON MODEL G**, for ice and electricity, working independently of any constant water supply as required in model C. This apparatus is identical with Model C except that an electric heater is provided which automatically operates when the room temperature is lower than the temperature required in the chamber and an electric motor which automatically circulates the water from melting ice to the water jacket when the temperature of the room is higher than the temperature required in the chamber. No connection with a water supply is required and the apparatus may be set to operate at any temperature from  $10^{\circ}$  to  $37^{\circ}$  C. and can be operated in any climate and in any place where water and electricity are available. Control is by the Hearson capsule and full operating directions are supplied with each utensil. Voltage must be specified in ordering.

No. 20876

**20876. Incubator, Low Temperature, Giddings.** The incubator proper is regular water-jacketed type with outer air space and covered with a heat insulating material. Beneath the incubator is an ice chest fitted with coils of pipe, which are connected to the water jacket of the incubator so that the water may circulate freely. In the pipe line is a pump operated by an electric motor. This motor is controlled by a thermostatic bar which makes and breaks the circuit through a solenoid switch, energized by the line, thus rendering the operator independent of the troublesome dry battery.

The regulation is effected as easily as with the ordinary electric incubator, the temperature for which the thermostat is adjusted remaining constant within  $\frac{1}{2}^{\circ}$ . All parts are readily accessible, and the construction is very simple. To put the equipment into operation it is only necessary to connect the feed wires and turn on the current.

The cooling arrangement permits practically any desired temperature below that of the room to be maintained. If a temperature below the freezing point is required, cracked ice and sodium thiosulphate (hypo) are placed in the ice-chest, while from 4 to 12 liters of water are drawn off and replaced by a solution consisting of 50% of glycerine and 50% of alcohol (95%).

Please specify voltage and current in ordering. If for alternating current also state number of cycles. See *Phytopathology*, Vol. II, p. 106, 1912.

No. 20884

**Hearson Cellular Incubator for Students' Use.** This Incubator is heated by gas or electricity and the fittings for regulating the temperature are the same as in those previously described. Prices given below are for gas heating. Electric heating adds \$21.00 duty free and \$31 50 duty paid to the list prices printed below.

This utensil is designed for use in educational laboratories where it is desirable to provide each student with a separate incubating chamber or drawer which may be removed from the apparatus without affecting the temperature of the remaining drawers. The inside of the utensil is strongly made of heavy copper, firmly stayed at frequent intervals. Each drawer of the size  $13\frac{3}{4} \times 8\frac{1}{2} \times 4\frac{1}{2}$  inches will accommodate about 60 culture tubes.

Seven flat copper tubes, extending the whole length of the drawers, form the sides and divide the apparatus into six vertical compartments; these are again sub-divided by eighteen terne-iron shelves, into four divisions horizontally, thus forming twenty-four pigeon holes water-jacketed in every case on two sides.

All the vertical tubes are joined to horizontal tanks at the top and bottom, so that the water is free to move up or down any of the tubes, or even up and down different parts of the same tube, thus equalising the temperature in all directions.

The drawers are made of terne-iron, which is not liable to rust, and each drawer has a thick varnished wood front, bearing a number which serves to show the order in which they should be replaced and enables the student to easily recognize the compartment allotted to him. The removal of one or more drawers does not appreciably affect the temperature of those which remain, and when the outer doors have been closed for a short time the temperature is practically the same in all parts.

20908. **Water Bath and Incubator, Hearson, for Wasserman Test** This apparatus consists of a strong copper vessel, nickel-plated, on a stand. The incubator is a double sided reservoir and is provided with a glass front and back. It is intended to be used on a bench facing the light. On the side of the apparatus a small tank is fixed, to which Hearson's control capsule is attached. This is regulated for 56 to 60° C. for the sterilization of liquids, and is provided with two perforated plates, one to take ordinary test tubes and other for small tubes. It is also provided with a hinged cover held in place by a spring which is laid over the wadded stoppings of the reagent tubes in order that they may remain in the water. The incubator itself is fitted with Hearson's control capsule and is regulated for 38° C. Thermometers are provided for two compartments, also two racks. The whole forms a very useful and complete set for the study of the Wasserman process.

20936. Autoclave or Vertical Steam Pressure Sterilizer, American Standard. Of heavy polished copper tin lined. Lids of heavy cast brass, nickel plated and fitted with steam-tight, ground in bevel joint, obviating entirely the use of washers. This apparatus is the most widely used autoclave in bacteriological work and has been supplied by us to many leading laboratories for over fourteen years, with unflinching satisfaction. Each apparatus is tested and guaranteed to stand a pressure of 35 lbs. to the square inch, and is provided with proper gauge and thermometer, reading both in temperature degrees and pounds pressure, also safety valve. With six screw clamps on lid. Prices on gas and oil heated apparatus include suitable burners. Prices on electric heating include cord and plug and electric heater. Inside dimensions 11 inches diameter by 24 inches deep.

No. 20960

No. 20964

- 20960. Autoclave or Steam Pressure Sterilizer, Horizontal Form.** No mechanical fastening whatever is used to secure the door and no packing or gasket is used to make the joint steam-tight. The steam pressure from within seals the door absolutely. The apparatus is made of heavy, polished copper with a double wall or jacket. Can be used for steam, gas or petroleum heating, but will be supplied for use with gas unless otherwise specified. Because of the double jacket the cotton plugs in the culture tubes are absolutely dry when the door is opened. When this sterilizer is supplied for direct steam connection the generator shown in illustration is not required, for which we make an allowance of from \$10.00 to \$17.00 depending upon the size of the sterilizer. Inside dimensions, inches.....

	16 x 12	20 x 16	24 x 20	28 x 22	28 x 25
Each.....	130.00	150.00	175.00	250.00	333.00

- 20964. Autoclave or Steam Pressure Sterilizer, Horizontal Form, double cylinder type with steam space entirely surrounding except at the door of entrance.** A particular feature of this sterilizer is the fact that the contents of the inner chamber become perfectly dry within one minute after the steam is withdrawn. Ebonized or enameled bronze door and frame with copper end, seamless drawn brass or copper shell (tinned internally) forming walls of sterilizing chamber, jacket and all fittings highly polished and nickel plated, mounted on white enameled tubular steel stand. Heating can be done by steam, gas or petroleum as ordered but will be supplied for gas heating unless otherwise specified.

Inside dimensions, inches..	9 x 19	12 x 20	14 x 22	16 x 24	20 x 28	24 x 32
Each.....	175.00	225.00	300.00	350.00	450.00	650.00

**Note.** When arranged for steam or gas heating, we recommend the use of the special auto-control valve, so designed that when the desired pressure is reached the supply is cut down just enough to maintain such pressure. This adds \$10.00 to the cost of each of the above sizes.

Each.....	44.00	39.00

21016. **Hearson Automatic Electric Steam Sterilizer.** This Sterilizer is operated upon any ordinary lamp socket (voltage must be specified in ordering) and, in addition, connection established with a constant water supply with overflow to sink. The apparatus operates absolutely automatically from the moment the switch is turned on. When the water boils the current is automatically reduced and no more current is consumed than is required to keep the chamber full of steam. Where a constant water supply with sink

for disposal of waste is not available, one pint of water will operate the sterilizer for twenty-four hours without attention. Flasks of media may be placed on the bottom of the sterilizer without danger of cracking and the filtration of agar effected without special precautions. The outfit is extremely economical in current consumption, gives off no fumes of any kind and allows no steam to escape.

Height, inches.....	10	22
Diameter, inches.....	8	12½
Duty Free.....	63.00	84.00
Duty Paid.....	94.50	126.00

No. 21016

- 21020.\* **Arnold Steam Sterilizer, Cylindrical Form.** Automatically maintains a constant temperature of 100° C without attention. Of tin, with copper bottom.

Inside dimensions, inches.....	7½ x 8½	10½ x 9½
Each.....	3.50	4.50
Inside dimensions, inches.....	11½ x 10½	12½ x 11½
Each.....	5.00	5.50

No. 21060

- 21032. Paraffine Embedding Ovens, Hearson, for gas heating.** These utensils are identical with the Hearson bacteriological Incubators for gas heating listed on p. 24, excepting that the capsule is adjusted for operation at temperatures between 45° and 60° C. instead of 37½° to 40° as regularly supplied with the Incubators. These capsules can be used interchangeably with those supplied with the Incubators. Complete with burner and thermometer.

Inside measurements, inches..... 6 x 6 x 7 9 x 9 x 12 12 x 12 x 14 15 x 15 x 18 20 x 20 x 24

Duty Paid..... 43.15 51.00 67.50 98.35 149.00

- 21056. Paraffine Embedding Ovens, Hearson, Anhydric Electric.** Adjusted for temperatures from 45° to 60° C. Works equally well on direct or alternating current but voltage must be stated in ordering. Identical in appearance and operation with Hearson Electric Incubators

Size, inches..... 10 x 7 x 6 12 x 9 x 9

Duty Free..... 37.80 45.00

Duty Paid..... 56.70 67.50

- 21060. Paraffine Embedding Bath, Coplin.** The bath is supplied with four independent cups of 3 inch diameter and one large central reservoir 7 inches in diameter, the latter connected with stopcock in front to draw off melted paraffine. Three spaces are supplied in front for heating material in glass vessels such as tall form Stender dishes. On iron base 17 inches high, with cylindrical shield for the gas flame. Without burner, thermometer or thermo-regulator.

Outside dimensions, inches..... 12 x 12 x 23 24 x 12 x 23

Each..... 33.00 48.00

No. 21064

- 21064. Vacuum Embedding Apparatus, Hearson,** consisting of a water bath with a heavy copper paraffine bath, 7 x 4½ inches, with thick plate glass lid made air-tight by means of a rubber ring. The apparatus may be used as an ordinary embedding bath, i.e., without exhaustion, or the paraffine bath proper may be exhausted by a few strokes of the air pump. The removal of all volatile reagents in which tissues have been soaked preparatory to embedding, is very much hastened by the use of this method. The control of the water bath is by Hearson's capsule. For gas heating. Price includes burner, flexible tubing and thermometer.

Duty Free..... 23.25

Duty Paid..... 31.50

No. 21068

21068. Vacuum Embedding Apparatus, Hearson, Electric, rectangular form, with two copper pans 5½ inches in diameter. Complete with thermometer, flexible cord and wall plug.  
Duty Free..... 40.50      Duty Paid..... 60.75

21072. Dehydrator, Hearson, for Continuous Drying of Tissues in Alcohol. This dehydrator consists of a water bath, boiler, condenser and receiver. The boiler containing the spirit to be distilled is heated by means of a gas flame through the intermediary of the water bath, the water bath being constantly replenished with the hot water which comes from the condenser. A is the water bath supplied by the pipe F through the intermediary of a small reservoir B, the surplus water from which runs to waste at the pipe E. O is the supply for cold water for condensing the vapor of the spirit as fast as it is formed. E is a glass tube to enable the spirit to be seen as it leaves the condenser. C is the receiver which must always be full of spirit up to the overflow. The spirit, overflowing from the receiver, runs into the boiler through the pipe T. The action of the dehydrator is such that the container is always full of absolute, or nearly absolute, alcohol. Tissues placed in C are rapidly deprived of their moisture and the water thus abstracted is left behind in the boiler and there unites with the hydrate of soda, which, by combining with it, becomes liquified. When all the hydrate of soda becomes liquified more must be added, or the whole of the spirit may be distilled off and fresh hydrate of soda placed in the boiler and the spirit returned to it. The apparatus is substantially made in copper and brass.

## STAUDINGER ANALYTICAL BALANCES

The three **Staudinger Analytical Balances** herein listed were first introduced by us into the United States in 1899, since which time we have been the sole United States agents for the maker, Wilhelm Spoerhase of Giessen, Germany, successor to the old firm of Carl Staudinger, established in Giessen in 1842.

**During this period we have supplied these Balances to practically every University, College and Technical School in the United States.** In some of the larger Universities, such as the University of Pennsylvania, Cornell University, etc., there are upwards of seventy-five Balances in actual use, the same type of instrument having been repeatedly ordered year after year over a period of fifteen years.

No. 21391

- 21304. Balance, Staudinger Analytical No. 1.** This Balance is designed for work in which high sensibility is required. In general construction it is the Staudinger modification of the usual German type, where the beam and pans are released simultaneously. By means of a patented rider sliding on the pointer varying degrees of sensibility are attainable and, for this reason, the No. 1 is adapted to a great variety of work. The scale is furnished with two divisions, one being for use with, and the other without, the reading microscope. The center of gravity of the system may be adjusted by the rider on the pointer so that 1 mg. equals 1 degree of the macro scale. The micro scale then divides this degree into tenths so that a direct reading to  $\frac{1}{10}$  mg. is attained through the microscope. The action with this adjustment is very rapid and the sensibility remains constant under varying loads. By raising the rider on the pointer 1 mg. equals 5 and finally 10 degrees on the macro scale so that by using the microscope to read the subdivisions on the micro scale sensibilities of  $\frac{1}{5}$  and  $\frac{1}{10}$  mg. are readily available. The times of a complete double swing for the three sensibilities are as follows:  $\frac{1}{10}$  mg. = 14 seconds;  $\frac{1}{5}$  mg. = 20 seconds;  $\frac{1}{10}$  mg. = 30 seconds.

**Capacity**—200 grams.

**Sensibility**—1-50 milligrams under full load.

**Case**—of well-seasoned mahogany, highly polished, with side doors and counterpoised front door.

**Base**—of highly polished and beveled black glass.

**Beam**—of hard welded magnalium, highly polished, 15 cm long.

**Knife Edges and Planes**—of agate throughout.

**Release and Arrest**—by means of a centrally placed milled head, half turn of which simultaneously releases beam, hangers and pans.

**Rider Carrier**—Patented Staudinger construction lifting the rider vertically in a straight line.

**Pans**—heavily platinum plated.

**Finish**—excepting magnalium beam all metal parts are heavily platinum plated or, if so specified, gold plated.

**Duty Free**..... 90.00      **Stock**..... 125.00

The stock prices of the Staudinger Balances have been materially reduced since the operation of the new Tariff Act of 1913.

No. 21306

No. 21308

No. 21320

- 21306. Balance, Staudinger Analytical No. 2.** This Balance is of the same general construction as the No. 1, with some simplifications and generally more robust construction, designed to stand heavier work where such high sensibility is not required. It is used in many laboratories for advanced student work as well as in industrial laboratories.

Capacity—200 grams.

Sensibility—under full load 1-10 milligram.

Case—of polished mahogany, with side doors and counterpoised front door.

Base—of highly polished and beveled black glass.

Beam—of hard welded magnalium, highly polished, 13 cm long.

Knife Edges and Planes—of agate throughout.

Release and Arrest—by means of a centrally placed milled head half turn of which simultaneously releases beam, hangers and pans.

Rider Carrier—patented Staudinger construction lifting the rider vertically in a straight line.

Pans—heavily platinum plated.

Finish—heavily nickelled with the exception of polished magnalium beam and platinized pans.

Duty Free..... 50.00                      Stock..... 70.00

- 21308. Balance, Staudinger Analytical No. 3.** This Balance is deservedly the most popular of the three and has been supplied by us in the past fifteen years to most of the principal colleges and universities in the United States and to many other laboratories. It has been designed primarily for students' use in quantitative work, and over 75 instruments are in use in some of our largest universities in the East, having been repeatedly ordered over a period of fifteen years. All of the essential features of Staudinger construction and design are incorporated and the instrument differs from the preceding Balances only in the matter of simplicity of finish and construction and sensibility.

Capacity—200 grams.

Sensibility—regular adjustment is 1-5 mg. equals 1 degree of scale. May be read to 1-10 mg. equals  $\frac{1}{2}$  degree of scale.

Case—of polished mahogany.

Base—of polished black slate.

Beam—of hard welded magnalium, highly polished, 13 cm long.

Knife Edges and Planes—of agate throughout.

Release and Arrest—by means of a centrally placed milled head half turn of which simultaneously releases beam, hangers and pans.

Rider Carrier—patented Staudinger construction lifting the rider vertically in a straight line.

Pans—heavily platinum plated.

Finish—with the exception of the pans which are platinum plated and the magnalium beam, all metal parts are lacquered in a dull black finish particularly resistant to laboratory fumes.

Duty Free..... 32.00                      Stock..... 45.00

- 21320. Balance, Analytical, Sartorius Model "U. S. A."** This new balance which has been specially designed for use in educational laboratories, has been very popular throughout the U. S. This Balance is of the German type, i.e., with simultaneous arrest of beam and pans and is fitted with Sartorius' patent compensation suspension and circular form of arrest as used on all Sartorius balances.

Capacity—200 grams.

Sensibility—1-10 milligram.

Case—of polished walnut.

Beam—of aluminum.

Knife Edges and Planes—of agate throughout.

Duty Free..... 39.00                      Stock..... 50.00

No. 21328

Note—With Studinger Balances Nos. 1, 2 and 3 two 10 mg rulers are furnished with each Balance. With Becker Balances Nos. 1 and 7 three 0 mg rulers are furnished and with Troemner Balances Nos. 10 and 30 three 3 mg rulers, all of suitable shape for convenient use.

No. 21332

- 21328. Balance, Analytical, Becker No. 1.** This is a high-grade analytical Balance, manufactured for us by the renowned firm of **Becker's Sons, Rotterdam**, and has long been in use in many leading laboratories. It is particularly adapted, because of robust construction, quick action and great sensibility, to the requirements of industrial laboratories and is highly recommended for such work.

Capacity—200 grams.

Sensibility—1-20 milligram.

Case—of highly polished, well-seasoned mahogany, with counterpoised front door and sliding door in rear.

Base—of beveled glass.

Beam—of aluminum, 6 inches long, graduated to 1-10 milligram.

Knife Edges and Planes—of agate throughout.

Release and Arrest—beam is arrested by center milled head and pans are arrested separately by pressure on ivory button.

Pans—of polished German silver.

Finish—with the exception of polished aluminum beam, metal parts are protected by gold lacquer very resistant to laboratory fumes.

Duty Free ..... 68.75

Stock ..... 125.00

- 21332. Balance, Analytical, Becker No. 7.** This Balance is also made for us by **Becker's Sons, Rotterdam**, and is especially recommended for students' use and for industrial laboratories where a higher priced Balance is not required. It is substantially made and at the same time sufficiently sensitive to give close results.

Capacity—100 grams.

Sensibility—1-10 milligram.

Case—of highly polished well-seasoned mahogany with counterpoised front door and sliding door in rear.

Beam—of aluminum, 6 inches long, graduated to 1-10 milligram.

Knife Edges and Planes—of agate throughout.

Release and Arrest—provided with the improved pan arrest with arrangement for lifting planes from the knife edges at the ends of the beams when the balance is at rest, as in the higher priced Balances. This feature is not found in other balances of corresponding price.

Pans—of polished German silver.

Finish—with the exception of the polished aluminum beam all metal parts are lacquered.

Duty Free ..... 36.00

Stock ..... 65.00

- 21324. Balance, Analytical, Troemner No. 10.** This Balance is in extensive use in industrial laboratories throughout the country, also in many of our leading universities, and needs no introduction.

Capacity—200 grams.

Sensibility—1-20 milligram.

Case—of old, well-seasoned mahogany, French polish; the front sash is counterpoised, opening up the full width of the case. The rear sash also slides up, allowing the weighing of long objects to extend beyond the outside lines of the case. The top and ends are also fitted with glass sash, thus securing plenty of light from all directions.

Base—top is covered with a black plate glass.

Beam—of cold rolled aluminum, having more than three times the tensile strength of pure aluminum, oxidized black with a non-corrosive preparation, and divided into fifty parts each side of the center knife.

Knife Edges and Planes—of agate throughout.

Release and Arrest—releasing arms are of simplest construction with three principal parts, swinging up to hold the beam and down to release it and operated by a turn button in front of case, constructed so as to bring their axes coincident with the contact line at the center knife edge and hold the beam firm, and secure when the Balance is being loaded or unloaded.

Pans—of aluminum, 3 inches diameter, of flat shape and adjustable on the arches. Arches are of cold drawn nickel silver, gold plated.

Finish—all brass parts are gold plated.

Stock ..... 125.00

No. 21324

# A NEW ANALYTICAL BALANCE

TROEMNER NO. 50 . . . . . \$50.00 NET

MADE BY HENRY TROEMNER, PHILADELPHIA. FOR THE ARTHUR H. THOMAS COMPANY

No 21340

**21340. Balance, Analytical, Troemner No. 50.** After long cooperation with the firm of Henry Troemner, Philadelphia, we are enabled to offer a Balance at \$50.00, bearing his name and guarantee, but made specially for us, which will satisfactorily meet all the practical requirements of the analyst as well as any Balance now listed at \$125.00. We will send this Balance to any responsible chemist subject to trial and approval and returnable at our expense if not satisfactory. This Balance is particularly recommended to industrial chemists because of its rigid and robust construction and is guaranteed to stand the daily wear and tear in a works laboratory.

**Sensibility**—The Balance has a definite sensibility of  $\frac{1}{10}$  milligram under full load of 200 grams in each pan.

**Capacity**—200 grams in each pan.

**Case**—The case is of French polished mahogany with counterpoised front sash, with glass sash at the back, top and both ends. The base is fitted with a drawer and is provided with screw leveling feet.

**Beam**—The beam is of aluminum alloy, 7 inches long and is graduated on the right arm into fifty divisions. The special feature of this beam construction is that it is designed to support successfully without flexure a load of 200 grams in each pan, and that the knife edges are set rigid in the beam, thus doing away with any possible shifting which would make the Balance inaccurate and undependable.

**Release and Arrest**—The beam is supported by a three point rigid beam arrest that has a full-away action and releases the beam so that the contact at the center knife edge is coincident with the contact at the end knife edge, thereby avoiding all jarring and possible injury to the knife edge by a sudden shock.

**Rider Carrier**—The rider carrier is very simple in construction and is designed to be thoroughly effective and free from any possibility of derangement.

**Bearings**—Of agate throughout.

**Pointer Scale**—The ivory pointer scale is recessed see illustration, so that the end of the pointer moves in the recess and in the same vertical plane as the divisions on the scale, thus avoiding all errors of parallax and making accurate readings convenient and rapid.

**Pan Hangers**—Of extra width and shape to conveniently accommodate a Vanier Potash Bulb.

**Price**..... 50.00

**21341. Balance, Analytical, Troemner No. 65,** exactly the same as No. 50 but with beam divided on both sides of the central knife edge instead of on the right-hand side only as in the No. 50, and with black polished plate glass base inside of the case..... 65.00

# RUEPRECHT PRECISION AND ANALYTICAL BALANCES

As supplied by us to laboratories in leading institutions throughout the United States for the highest grade of research work.

No. 21360

No. 21368

21360. **Balance, Precision, Rueprecht**, a balance of great precision and large carrying capacity, constructed upon the well-known Rueprecht system, with all moving parts heavily gold plated, in mahogany case.

Capacity, grams.....	600	1000	2000	5000
Sensibility, milligrams.....	0.1	0.1	0.2	0.5
Duty Free.....	220.50	248.00	330.75	427.25
Duty Paid.....	305.25	343.50	458.00	591.50

21364. **Balance, Precision, Rueprecht**, as above, with automatic device for removing and placing weights on the right-hand beam and with arrangement for variable sensibility.

Capacity, grams.....	200	600	1000	2000
Sensibility, milligrams.....	0.05	0.1	0.1	0.2
Duty Free.....	215.00	344.50	385.85	496.10
Duty Paid.....	300.00	477.00	534.25	686.85

**Note**—The above Balances can be furnished in case constructed entirely of brass and mirror plate glass at an advance of approximately 20%.

21368. **Balance, Analytical, Rueprecht**, in fine mahogany case, with beam 200 mm long; 200 grams capacity.

Sensibility, milligrams.....	0.1	.05
Duty Free.....	124.05	132.30
Duty Paid.....	171.75	183.15

21372. **Balance, Analytical, Rueprecht**, as above, but with shorter beam, i.e., 150 mm long; 200 grams capacity.

Sensibility, milligrams.....	0.1	.05
Duty Free.....	124.05	132.30
Duty Paid.....	171.75	183.15

**Note**—Either of the above Balances can be furnished in case composed entirely of brass and mirror plate glass at an extra cost of \$35.85 duty free and \$49.60 duty paid.

No. 21376

21376. Balance, Technical-Analytical, Staudinger, a convenient balance for quick and exact weighings on the lecture table and for students' work. With beam and hangers of magnalium and agate bearings and knife edges. Case is of mahogany with sliding front door and base is of black marble.

|-----------------|--------|-----------------|--------|

No. 21384

No. 21388

**21384. Balance, Assay, Ainsworth Inverted Type V, a reliable and widely used Assay Balance.**

**Sensitivity**—adjusted to a sensibility of 1-500 milligram and afterwards reduced to 1-200 milligram to increase the rapidity.

**Case**—of mahogany with counterpoised sliding door, 17 x 17 x 10 inches.

**Beam**—of hard rolled magnesium, 5 inches long.

**Edges and Bearings**—the end bearings are flat agate planes with suitable recesses for the engagement of agate contact points by means of which the bearings are raised from the edges when at rest.

**Rider Carrier**—of improved design with no metal surfaces in sliding contact and will operate smoothly and without lubrication under all conditions. The graduated scales divided in hundredths, each division representing 1-100 the weight of the rider used, are attached to the carrier. The rider carrier rod has a slight amount of end play in the sliding bushing which permits the withdrawal of the carrier from the eye of the rider without disturbing the reading, a greatly simplified construction.

**Release**—operates rapidly without causing the beam to kick, this being accomplished by first releasing the pan rests, then the end bearings and finally the beam, by means of a very simple mechanism not liable to derangement and which overcomes a serious defect in earlier balances of this type.

**Finish**—all metal parts are heavily gold plated and lacquered.

**Price**..... 300.00

**21388. Balance, Assay, Ainsworth Type C, with Improved Multiple Rider Carrier.** As used by leading assay-cr., smelters and mills where a large number of accurate weighings are to be made. The carrier can be attached to any of the other Ainsworth Balances. Each weight or rider has an individual arm, cannot be misplaced and can be operated with beam in motion. The numbers on the arms down indicate the weight of the riders on the beam and, when through weighing, all riders are reset simultaneously by a reverse movement of the thumbpiece.

**Sensitivity**—adjusted to a sensibility of 1-500 milligram and afterwards reduced to 1-200 milligram to increase the rapidity.

**Case**—of mahogany with counterpoised sliding door, 20 x 17 x 10 inches.

**Beam**—of truss form, with star adjustment, unobstructed on top, divided in 50 parts on either side of the center and read from 0 to the full weight of the rider used.

**Rider Carrier**—similar in construction to inverted type, No. 21384.

**Finish**—all metal parts are heavily gold plated.

**Price**..... 335.00

No. 21392

No. 21396

21392. **Balance, Assay, Troemner's New Form, No. 30.** This is an entirely new Balance designed to meet the demand for a low priced, short arm Balance with a sensibility of  $\frac{1}{100}$  milligram and of quick action. It requires but 13 seconds for one complete oscillation.

**Sensibility**—1-100 milligram.

**Case**—of well seasoned mahogany, French polished, with glass sides and top and with black plate glass sub-base; fitted with counterpoised sliding door and provided with a reading glass for the ivory index. 18 x 9½ x 18 inches.

**Beam**—of hard rolled aluminum alloy, graduated on both sides of the center knife edge into 30 divisions. The beam is unobstructed on top, so that the rider can be placed at any division on the beam, from 0 at the center to the last division on the beam, which is directly over the end knife-edge and represents the full weight of the rider used. With a 1 mg. rider on the one-half divisions, or a ½ mg. rider on the full divisions the Balance shows 1-100 mg. for each division on the ivory index.

**Edges and Bearings**—of Russian agate—accurately ground.

**Rider Carrier**—of single, double hook pattern, operated from right hand side of case with full, clear sweep across beam, and the rider, either single or double, can be placed at any division on the beam.

**Finish**—all the brass parts are covered with an impervious lacquer.

**Price**.....

125.00

21396. **Balance, Assay, Staudinger No. 22b.** This instrument is devised specially to meet the requirements of students' assay work in the U. S. at a low price. A large number of these instruments are now in use in this country, and no other balance of similar specifications is offered at a corresponding price.

**Capacity**—2 grams.

**Sensibility**—1-50 mg., but will easily show 1-100 mg.

**Case**—of mahogany.

**Beam**—of magnesium, 200 mm long.

**Knife Edges and Planes**—of agate throughout.

**Release and Arrest**—the arrestment of beam hangers and pans is accomplished quickly and conveniently.

**Duty Free**..... 36.00

**Stock**..... 50.00

No. 21400

No. 21404

21400. **Balance, Assay, Pocket.** Improved form with eccentric lift for beam. Size when closed is 6 x 2½ x 1½ inches. Capacity 10 grams; sensibility ¼ mg. Complete with set of weights. A half assay ton weight is usually supplied in place of the 10 gram piece..... 16.50

No. 21408

21404. **Balance, Micro, Nernst.** This Balance is based upon the torsion of a very fine quartz fibre and is used for weighing small crystals and for carrying on microchemical reactions with accurate observation of change in weight. The Balance is mounted securely and by means of proper arresting device may be shipped with reasonable safety. Full instructions for operation accompany each Balance. Capacity 10 mg.; sensibility  $\frac{1}{100000}$  mg. See *Berichte der D. Chem. Gesellsch. Jahrg. XXXVI Heft 10 und Jahrg. XXXVIII Heft 1.*

**Duty Free**..... 37.95

**Duty Paid**..... 43.70

**Duty Free**..... 21.45

**Duty Paid**..... 28.60

No. 21412

21412. Balance, Lecture Table, Staudinger, designed particularly for experiments where large carrying capacity is required; capacity 5000 grams, sensibility 1 centigram. Beam is divided into 100 equal divisions with zero at the left-hand side so that a 50 centigram platinum rider may be used with a value of 100 centigrams at the right-hand end of the beam. Beam is of bronze with agate bearings and planes, on heavy mahogany base; with levelling screws.

| Duty Free.....   | 105.00 | Duty Paid..... | 147.00 |

No. 21420

21420. Balance, Decimal, Mach, specially constructed for weighing precise quantities of substances for analysis, particularly in sugar, fertilizer and brewery laboratory practice or other work where large numbers of consecutive weighings of equal charges are to be made. The usual method is to use a scoop, counterpoised on the scale pan with lead shot placed in the circular box under the hangers at the short arm of the beam. If 20 grams of a substance is to be weighed, a 200 gram weight is placed in the rear of the short arm pan and the scoop on the front scale pan charged until the pointer comes to zero. Capacity 100 grams, sensibility 1° of scale = 1 milligram. Balance is furnished in mahogany case with metal parts heavily nickelled, suitable for use in the tropics and with base plate of polished mirror plate glass.

# ANALYTICAL WEIGHTS

No. 21600

One piece Weights of Tobin bronze, made according to the designs of the Bureau of Standards, for use as Primary Standards, guaranteed to be within the tolerances established by the Bureau for Class A (new class M) are quoted upon application. Certificates for Analytical Weights of German manufacture such as No. 21600 are furnished from the Kaiserlichen Normal-Eichungs-Kommission of Berlin, as a matter of convenience.

No. 21612

21600.	Balance Weights, Analytical, with gram pieces heavily gold plated and with fractional pieces of platinum except the 1, 2 and 5 mg which are of aluminum and two 10 mg riders. In velvet lined, polished mahogany box, with ivory tipped forceps and fractional pieces covered by glass plate. These weights are adjusted with sufficient accuracy for the highest grade of analytical work.								
Sets, 1 milligram to grams.....	20	50	100	200	500	1000

<b>21724.</b>	Same as No. 21720 but filled with mercury.									
<b>21728.</b>	Observatory, U. S. Weather Bureau pattern. Furnished with scale divided either to inch and vernier reading to . <sup>1</sup> / <sub>100</sub> inch or graduated in millimeters and reading by vernier to mm. Mounted on polished mahogany board with white glass background to facilitate accurate reading. With thermometer.									
<b>21732.</b>	Barometer, same as No. 21728 but without mahogany board.									
<b>21736.</b>	" "									
<b>21740.</b>	" "									
<b>21744.</b>	Barometer Tube, bent, with bulb, closed at one end.									
<b>21748.</b>	" straight, closed at one end.									
<b>21752.</b>	Barometer, Aneroid, with open porcelain dial showing internal arrangement, 5 inches in diameter in brass case.									
<b>21756.</b>	Barometer, Aneroid, watch form for the pocket, 2½ inches in diameter, in gilded metal mounting and morocco carrying case. Compensated for temperature and with revolving altitude scale reading to 8000 ft.									
<b>21760.</b>	Barometer, same as No. 21756 but with revolving altitude scale reading to 16,000 ft.									
<b>21764.</b>	Barometer, Richard, Recording. Divisions of chart equal 1 mm of mercury. Each chart equals seven days of time. In metal and glass case, 18 x 12 x 11 cm.									
	Duty Free ..... 22.00 Stock .....									
	Charts, for use with above.									
	Duty Free, per 100 ..... 2.50 Stock .....									
<b>21768.</b>	Battery, Edison Primary. These batteries, formerly known as Edison-Lalande, are unequalled for closed circuit work. They have a mean working E. M. F. of .667 volts per cell. When working continuously it is not advisable to take over 1½ amperes from the "BB" type, 2¼ amperes from the "Q" type and 6 amperes from the "S" type.

Carbon, for renewal.....	.50	.80	.90
Zinc " ".....	.20	.25	.30

# 21776. Battery, Dry, an open circuit battery of high efficiency, 7 x 2½ inches.

21780. Battery, Storage, Model of the Physikalisch-Technische Reichsanstalt, Type U. These cells are 32 x 30 x 80 mm high, with sealed in porcelain lid and arrangement to permit the outlet of gases through fine glass wool. The cells have an E. M. F. of 2 volts each and have a capacity of .8 ampere hours at the normal discharge rate of  $\frac{1}{10}$  ampere, or 2 ampere hours at a discharge rate of  $\frac{1}{100}$  ampere. They are widely used for physical measurements, the testing of ammeters, voltmeters and other electrical measuring instruments, and have been found useful in many kinds of laboratory work where a great variation in E. M. F. is required. The cells are furnished singly for mounting in the laboratory or mounted up on base boards with connections, in batteries of from 10 to 100 cells; in portable cases, with switch board and lid, in batteries of 20 to 100 cells; and in portable cabinets in batteries of from 120 to 400 cells. Prices on application.

21784. Battery, "Chloride Accumulator," Portable Type. Portable batteries are shipped filled with electrolyte and charged ready for service. While the greatest care is used in packing, it is almost impossible to avoid damage to cells of this type shipped by freight. For short distances it is, therefore, recommended that shipment of the portable type be made by express. Where distance is great it is recommended that electrolyte be forwarded separately as in the case of regular batteries. Each cell when discharging gives approximately 2 volts and, as the cells in each case are connected in series, the number of cells multiplied by 2 will give the approximate voltage between the two outside connectors of each case. The normal charge rate is the highest rate in amperes at which the battery should be charged. At this rate a battery will be fully charged in nine hours and discharged in eight hours.

**21788. Battery, "Chloride Accumulator,"** the most widely used form of storage battery. The voltage of cells of all capacities is slightly over 2 volts on open circuit and, during discharge at the 8 hour rate, varies from that point at the beginning to 1.75 volts at the end. Electrolyte is shipped in carboys, for each of which a charge of \$2.00 net is made and an extra charge of 5c for caps when required. Credit will be allowed in full for these carboys when returned in good condition and charges prepaid. The following net charges are made for casing and packing.

No. 21840

No. 21841

No. 21852

**NOTE**—Our "Best Bohemian" beakers Nos. 21840, 21844, 21860, 21864 and 21868 are offered as being the highest product of the Bohemian factories. They are selected after the most exhaustive chemical and physical tests made in Philadelphia under our own direction and are distinctly superior in shape, finish and resistance properties to German made beakers, with the exception of the products of Schott & Gen at Jena. We do not list or stock German beakers but can supply them on duty free orders at somewhat less price than our "Best Bohemian."

**21840. Beakers, Best Bohemian Glass, Griffin's low form, with spout.** This is our standard beaker and widely used in both educational and industrial laboratories. They are selected with special care as to shape and quality and are recommended as a most satisfactory beaker for routine work.

Number.....	000	00	0	1	2	3	4

No. 21965

No. 21972

No. 21984 Blower

No. 21984 Air Receiver

21960. Bladders, Animal, dried assorted sizes. Per dozen..... 1.00
21964. Blower, High Pressure, a new patent precision blower absolutely noiseless in operation and highly recommended for laboratory use. Very superior in steadiness of pressure and power required to the ordinary blower operating on the ventilating fan principle. Size A gives 4½ kilos, requires ½ h. p. motor and should be driven at 1100 r. p. m. Size B requires 1 h. p. and gives 8 kilos and should be driven at 700 r. p. m. Size A will operate simultaneously three laboratory blast lamps and Size B will operate six.
- |                | A     | B     |
|----------------|-------|-------|
| Duty Free..... | 18.00 | 30.00 |
| Duty Paid..... | 21.60 | 36.00 |
21968. Blowers, Foot Power. These blowers produce a powerful and continuous blast, the pressure of which may be increased by adding one or more rubber discs to the air reservoir.
- |   | A    | B    |
|---|------|------|
| Diameter of air reservoir, inches.....  | 7½   | 9    |
| Each.....   | 5.00 | 7.00 |
| 21972. Blowers, Foot Power, same as No. 21968 but mounted on legs.  |      |      |
| Diameter of air reservoir, inches.....  | 7½   | 9    |
| Each.....   | 6.00 | 8.00 |
| 21976. Rubber Discs for above Foot Blowers. These discs are cut from steam cured sheet rubber which is made of the best Up-River Para and contains no other ingredients than the necessary sulphur for curing. Will last much longer than discs cut from ordinary rubber sheeting.  |      |      |
| Diameter, inches.....   | 7½   | 9    |
| Each.....   | .60  | .90  |
| 21980. Nets for above Foot Blowers. Each.....   |      |      |
| 21984. Blower, Crowell's Positive Pressure. Will give blast of from 1 to 10 lbs. pressure to the square inch or may be used as a vacuum pump for exhausting of vacuum not exceeding 24 inches of mercury. This apparatus is most satisfactory in securing suction for laboratory filtrations, etc. There are no springs, gears, valves or unbalanced parts and the pump does not have to be reversed when changing from blast to suction. In ordering please state whether or not air reservoir is desired. |      |      |

No. 22024

22024.	Blowpipe Set of Apparatus and Reagents, as designed by Prof. Butler of the Colorado School of Mines for use in the laboratory and in the field. Each piece is so arranged as to prevent any breakage; outside dimensions $11 \frac{1}{4} \times 6 \frac{1}{2} \times 2 \frac{1}{4}$ inches. Complete including wet and dry fluxes and alcohol and oil in lamps.					17.50
	The outfit consists of the following:—					
	Blowpipe	Anvil	Cobalt Nitrate	Bismuth Flux		
	Platinum Wires and Holder	3 Arsenic Tubes	Hydrochloric Acid	Borax		
	Combination Charcoal Borer,	2 sticks Charcoal	Sulphuric Acid	Potassium Bisulphate		
	Magnet and Chisel	6 open Tubes	Nitric Acid	Oil, Lamp, brass		
	Streak Plate	Large Test Tube	Tin	Alcohol Lamp, brass		
	Blue Litmus	Small	Microcassmic Salt	Hammer		
	Red Litmus	Ammonium Hydrate	Sodium Carbonate	Platinum Tipped Forceps

**REAGENT BOTTLES, S. B. S. Type**, of best German glass, with conical stopper with projecting flange to protect the bottle from dust in the narrow mouth shape and a flat hexagonal stopper projecting over the rim in the wide mouth shapes. The stopper can be placed on the table either on its side or inverted, without contact of the ground surface. Bottles for alkaline solutions, such as Potassium hydrate are made with a loosely fitting stoppers inside the neck but with the under side of the flange ground to fit the upper surface of the mouth of the bottle. Bottles are carried in stock in the labels designated below. Labels are deeply etched into the glass by means of sand blast and filled with white pigment. In ordering please use numbers. Special labels are engraved to order at an extra cost of 25¢ each. The Bottles may be imported duty free at an approximate reduction of 33 $\frac{1}{3}$ %, but orders must aggregate at least 100 bottles of a size.

**22270. Reagent Bottle, Narrow Mouth, 125 cc capacity, as above, with labels as below.**

Test Paper	

**REAGENT BOTTLES, Whittall-Tatum Company,** with ground glass blanks, blown in the glass, the surface of each letter being ground so as to render it distinct. The lettering is thus indestructible and in no danger of being defaced when the bottle is washed or handled, and the inconvenience and unsightly appearance attending the use of paper labels is entirely avoided. The bottles are made of glass containing no lead, zinc or other metallic flux, and, in the points of convenient shape, thin, dropping lip and perfect stoppering, are unequalled. They are exclusively used in many of the leading laboratories in the U. S. See illustration on preceding page.

**Reagent Bottles, Narrow Mouth,** as above described. For names available in each capacity see list below. Names not in list may be engraved on bottles at an extra charge of 50¢ per dozen net. Please use numbers in ordering.

No. 22328

No. 22332

No. 22336

No. 22336

No. 22360

22328. REAGENT BOTTLES, Narrow Mouth, with name and symbol, of hard white potash glass, with polished bottoms, and flat stoppers; with white enamelled labels with double border and brilliant black acid proof letters and figures for both name and symbol. Exactly like illustration. Because of the great variety of labels used and the alternatives offered these bottles are not carried in stock and are imported to order only in quantities aggregating not less than \$25.00 in value.

Capacity, cc.....	50	100	125	250	500	1000	2000	4000
Each, Duty Free.....	.30	.35	.40	.45	.50	.60	.85	1.25
Each, Duty Paid.....	.45	.50	.50	.60	.70	.85	1.15	1.75

22332. Reagent Bottles, Wide Mouth, otherwise same as above.

Capacity, cc.....	50	100	125	250	500	1000	2000	4000
Each, Duty Free.....	.30	.35	.40	.45	.55	.70	.90	1.30
Each, Duty Paid.....	.45	.50	.50	.60	.80	.95	1.25	1.85

Note—While we recommend Bottles as listed under No. 22328 and 22332 as standard, we offer the following alternatives in style, finish, etc.

22336. Alternative I. With upright stoppers at same price as regular No. 22328 and 22332 with flat stoppers.

22340. Alternative II. Of amber or blue glass instead of white, add the following to price of No. 22328 and 22332.

Capacity, cc.....	50 to 100	125 to 1000	2000	4000
Each, Duty Free.....	.02	.03	.05	.08
Each, Duty Paid.....	.03	.04	.08	.10

22344. Alternative III. For desk number on label and stopper, add the following to price of No. 22328 and 22332.

Capacity, cc.....	50 to 100	125 to 1000	2000	4000
Each, Duty Free.....	.03	.06	.06	.08
Each, Duty Paid.....	.05	.10	.10	.12

22348. Alternative IV. For loose fitting glass caps (Fig. 2) add the following to price of No. 22328 (narrow mouth).

Capacity, cc.....	50 to 100	125 to 1000	2000	4000
Each, Duty Free.....	.06	.10	.12	.15
Each, Duty Paid.....	.10	.15	.16	.25

22352. Alternative IV. For loose fitting glass cap, add the following to price of No. 22332 (wide mouth).

Capacity, cc.....	50 to 100	125 to 1000	2000	4000
Each, Duty Free.....	.08	.12	.15	.20
Each, Duty Paid.....	.12	.16	.25	.30

22356. Alternative V. For label like No. 22328 but without chemical symbol deduct the following from price of No. 22328.

Capacity, cc.....	50	100	125	250	500	1000	2000	4000
Each, Duty Free.....	.08	.08	.10	.12	.12	.15	.20	.20
Each, Duty Paid.....	.12	.12	.15	.16	.16	.20	.25	.25

Note—Prices for square or diagonal cut stoppers with and without flange, labels with etched lettering, labels without border, lettering without background, etc., will be sent upon application.

22360. Bottle Caps, of glass, to fit over the stoppers of Reagent Bottles.

Inside diameter of cap, mm.	26	30	35	39	45	49	60
Capacity of bottle, cc.....	30	60	125	250	500	1000	2000
Per ten.....	1.00	1.00	1.00	1.00	1.00	1.50	1.50

22364.	Bottle, Graduated, of flint glass, with glass stopper. So-called "mixing jar."	Capacity, cc.	250	500	1000
	Each		1.25	2.00	3.00
22368.	Bottle, Pressure, Lintner, complete with metallic clamp. Capacity 125 cc.				2.75
22372.	" " of heavy glass, with patent stopper.	Capacity, cc.	100	150	200
	Each		.30	.32	.35
22376.	Bottles, Ether, of glass, with ground in stopper and ground on glass cap, widely used for all volatile liquids. This is a well made imported bottle.	Capacity, cc.	50	100	250
	Each		.45	.50	.65
22380.	Bottles, Hard Rubber, with paraffine seal and screw cap, for acids.	Capacity, cc.	100	250	500
	Each		.75	1.00	1.50
22384.	Bottles, Oil Sample, of flint glass, tall, narrow shape.	Capacity, ounces.	1	2	4
	Number in original case		864	720	432
	Per dozen		.40	.50	.65
	Per gross in original case		3.75	4.90	6.50
22388.	Bottles, Oil Sample, same as No. 22384 but with metallic screw cap with cork lining. Capacity 4 oz., length 6 $\frac{1}{2}$ inches, diameter 1 $\frac{1}{8}$ inches. Packed 432 in original cases.	Each			.12
	Per dozen				1.05
	Per gross in original case				10.25
22392.	Bottles, Woulff, with two necks.	Capacity, cc.	125	250	500
	Each		.40	.45	.60
22396.	Bottles Woulff, with two necks and bottom tubulation.	Capacity, cc.	500	1000	2000
	Each		.80	1.00	1.50
22400.	Bottles, Woulff, with three necks.	Capacity, cc.	125	250	500
	Each		.45	.50	.65
22404.	Bottles, Woulff, with three necks and bottom tubulation.	Capacity, cc.	500	1000	2000
	Each		.90	1.20	2.00
22408.	Bottles, Woulff, with three necks, two of which are fitted with ground in glass delivery tubes and one with ground in glass stopper.	Capacity, cc.	125	250	500
	Each		1.00	1.25	1.60
22412.	Bottles, Water Sample, 2 oz. capacity, with flat ground in stopper. Both bottle and stopper can be numbered with serial number. As used in large quantities in the Filtration Laboratories of the Philadelphia Bureau of Water, etc.	Style	Plain	Numbered	
	Each		.25	.30	
	Per dozen		3.00	3.60

22592.	<b>Burette Rose Automatic Adjustable</b> (Patent applied for). For repeated delivery of definite quantities. Automatically delivers the quantity at which it is set and cannot overflow. The quantity to be delivered can be quickly changed. Specially recommended for nitrogen determinations by Kjeldahl method, fiber determinations, fat determinations in milk analysis by Babcock method, for lead acetate solution in sugar determinations, for solvents in ore and soil laboratories and for the dispensing of nutrient solution and culture media in bacteriological laboratories. See <i>Journal of the American Chemical Society</i> , May, 1910. Measuring tubes 35 x 200 mm giving an approximate delivering capacity of 182 cc each. ....			6.00

**BURETTES, PRECISION**, graduated by weighing at 20° C. in accordance with the specifications of the Physikalisch-Technische Reichsanstalt, i. e., with individual control number, time of outflow, all around graduations for the whole centimeters and semi-circular graduations for the fractions, etc. These burettes are offered with our unofficial factory certificate and also with the Physikalisch-Technische Reichsanstalt certificate and control stamp, i. e., the official certificate of the German government.

#### Precision Burettes with Unofficial Factory Certificate

These certificates are made out in the factory in exact accordance with the methods prescribed by the Physikalisch-Technische Reichsanstalt and no burette is certified unless the error falls within the limit permitted by the Physikalisch-Technische Reichsanstalt. The data on these certificates may be used as a check where burettes are calibrated in the laboratory or with entire reliance upon the accuracy of the figures given.

22660.	Burettes, Precision, with pinchcock, rubber tubing and glass tip, graduated in accordance with the requirements of the P. T. R. at 20° C. and with unofficial factory certificate.

	Diameter of flame, mm.....	25	30	
	Each.....	2.10	2.50	
BURNERS, BLUE FLAME, for high temperatures with great economy of gas. This is the latest development of the grid top type of burner, giving greatly increased heating power and an absolutely homogeneous flame, all of which is available for heating from the top of the burner to the extreme point. The gas regulating device permits its use with any quality of gas delivered at any pressure and permits regulation from the maximum to the smallest flame without back-firing. This burner is supplied in five sizes and also on adjustable support and with blast attachment. With blast attachment a temperature exceeding 1700°C is obtained.				
22920.	Burner, Blue Flame, as above described.			
	Diameter of grid top, mm.....	19	22	25
	Each.....	1.00	1.60	2.00

22952.	Crown Top for Burners, giving round flame, Suitable for heating small dishes.....	.40
22956.	Gauze Top for Burners, giving large round flame.....	.25
22960.	Wing Top for Burners, giving a broad flat flame very suitable for bending glass tubing.....	.10
22964.	Blowpipe Tip for Burners, giving a flat flame, with rest for blowpipe.....	.15
22968.	Tripod for Burners, for supporting small dishes, etc., directly over flame.	
	Size.....	Small Large
	Each.....	.15 .20
22972.	Tube for Burners, to fit inside of the burner for giving yellow flame for blowpiping.....	.15
22976.	Star for Burners, to support chimney, etc.....	.20
22980.	Chimney of metal, for use on burners in connection with star No. 22976.....	.10
22984.	" of iron, with support attached.....	.40

22988.	Guard for Burners, of vitrified earthenware, 9 inches high, 8 inches diameter at bottom and 5 inches diameter at top. Protects the flame from drafts and forms a rigid non-corrosive support. .35	
22992.	Burner, Bunsen Blast, with separate cocks for blast and gas supply. The blast is directed at the mouth of the burner by a small tube which aids as a powerful blowpipe. Can be used as an ordinary Bunsen burner and blast turned on only when desired. Height 6½ inches.....	3.50
22996.	Burner, Bunsen Blast, for use with gas and air pressure, new pattern. On adjustable stand with separate cocks for blast and gas, and with three tips.....	3.50
23000.	Burner, Bunsen Blast, improved form, extra large size for use with gas and air blast. On adjustable stand with two tips.....	8.00

23004. **Burner, Blast**, French form, mounted on universal joint on tripod, with separate cocks for gas and pressur..... 5.00
23008. **Burner, Compound Blast**. An improved Burner of the Fletcher type, furnishing a flame from a finely pointed jet to a large powerful blast. One lever adjusts air and gas automatically. With pilot light..... 10.00
23012. **Burner, Barthel, Automatic**, for benzene. Burns 90 minutes with full flame on one charge. Will melt copper wire 3 mm in diameter in 45 seconds. Use benzene from sp. gr. 0.67 to 0.71..... 4.50
23016. **Burner, Barthel, Automatic**, for benzene, on tilting mount. Burns two hours with full flame on one charge. Melts copper wire 4 mm diam. in 1½ minutes. Flame may be placed at any angle. Very convenient for bending glass tubing, etc., in the laboratory. Use benzene of sp. gr. 0.67 to 0.71..... 8.00
23020. **Burner, Barthel Automatic**, for alcohol. Burns 90 minutes with blue, smokeless flame on one charge. Melts copper wire 3 mm diameter in 1½ minutes..... 4.00
23024. **Burner, Barthel Automatic**, for alcohol. Produces a perfectly blue flame without smoking somewhat hotter than the flames of ordinary gas burners. Considered the best alcohol burner made. Price includes burner, 5 ft. of metallic tubing and reservoir.
- | Size..... | Small | Medium | Large |
|-----------|-------|--------|-------|
| Each..... | 6.00  | 8.50   | 10.00 |
23028. **Burner, Barthel Automatic**, for benzene. A blast burner with perfect combustion giving a temperature of about 1400° C. This burner is smokeless and odorless and absolutely safe. Used with flame tubes of three sizes producing a benzene blast or cooking flame. Regularly furnished with medium size flame tube—21 mm diameter..... 7.50

| 23048. <b>Burner, Blast</b> , for gasoline. With flame adjustable from very small to five or six inches. Will burn about 1½ hours at full blast on one charge. With swivel burner and removable tripod. Reservoir 3½ x 4 inches, capacity 1 pint. Nickel plated..... |     |     | 4.75 |

No. 23064

No. 23052

No. 23060

No. 23068

No. 23056

23052. **Burner, Blast**, with two darting needle point flames, for sealing vials, ampoules, serum tubes, etc. On heavy base with adjustment for gas and air and for use with flame in vertical position. . . . 6.00
23056. **Burner, Blast**, Thüringian glass-blower's model, with ball bearing socket, on heavy base, all parts hard soldered, with gas tube of 7 mm. . . . . 3.50
23060. **Burner, Blast, Janus Improved**, as used in the German glass blowing industry for making stopcocks, Roentgen tubes, etc. A very practical blast burner for chemical laboratories as by a simple turn either a thin needle pointed flame or a large roaring flame of varying sizes, is obtained. Each burner tube has independent regulation for gas and air and one may be operated independently of the other. Diameter of large tube 7 mm, of small tube 5 mm. . . . . 10.00
23064. **Burner, Blast**, double tube, with foot blower. A new form designed particularly for the sealing of vials, ampoules and tubes containing various biological products where instantaneous sealing is important. The ordinary blast burner is unsatisfactory for this purpose because of the improper shape and size of the flame and its unsteadiness, noise and great consumption of gas and air. This new burner has two darting needle point flames which meet and form one blade shaped flame which instantly seals small tubes. By regulation of the gas and air this blade shaped flame can be retained at any desired length. In sealing 1 cc ampoules only  $\frac{1}{3}$  cu. ft. of gas per hour is required. The use of this burner permits the sealing of the ampoules so quickly that no heat reaches the contents, an important feature where the vial or ampoule contains camphor, ether or concentrated solutions easily carbonized or with chemicals of a low boiling point such as ether, ethyl chloride, etc. With small foot blower and bulb as shown in illustration. . . . . 10.00
23068. **Burner, Blast**, only as above, without blower or bulb. . . . . 5.00

No. 23072

No. 23076

23072. **Burner, Evaporating**, of cast iron. Very convenient for heating glass and porcelain vessels as no cold air can reach the hot part of the dish. Flames are blue and smokeless

No. 23084

No. 23092

23080. **Burner, Dangler**, for gasoline. Under ordinary pressure a temperature of 1100° F. is obtained. Complete with copper reservoir..... 8.00
23084. **Burner, Hydro Carbon**, burning vaporized kerosene which is automatically generated as fast as needed from ordinary kerosene; gives a hot blue flame without smoke or smell; height 8½ inches, diameter of base 9 inches. Without stand as shown in illustration..... 4.00
23088. **Stand**, for above burner, with top 8½ inches in diameter..... .50
23092. **Burner, Alcohol**, of brass, nickel plated; guaranteed to be smokeless, odorless and safe; will boil 1 quart of water in 8 minutes; dimensions 4½ x 4½ x 8 inches..... 1.00

No. 23096

No. 23104

No. 23108

23096. **Burner, Gas**, 3½ inches high, 6 inches in diameter. For ordinary or gasoline gas. Please specify in ordering..... .60
23104. **Burners, Gas**, of cast iron, low form, 4½ inches high, fitted with double burner.  
Diameter, inches..... 6¼ 7½ 8½  
Each..... 1.00 1.15 1.25
23108. **Burner, Gas**, with two radial burners and rings set flush with smooth top. Dimensions of top 11½ x 21 inches. For ordinary or gasoline gas. Please specify in ordering..... 3.00

No. 23112

No. 23120

No. 23124

23112. **Burner, Fletcher Radial**. Made entirely of annealed cast iron, giving a solid flame when in use without tendency to run to a point in the center. Convenient for general laboratory work.  
Diameter, inches..... 3¼ 5  
Each..... 1.50 2.00
23116. **Burner**, same as No. 23112 but with cap-nut regulator. For use with gasoline gas.  
Diameter, inches..... 3¼ 5  
Each..... 1.80 2.30
23120. **Burner, Low Form**, extra large, with gauze top; height 5 inches, diameter of gauze 2½ inches, length 14 inches. A very powerful burner..... 2.00
23124. **Burner, for Low Temperatures**, adjustable from a gentle current of warm air to a clear red heat, dispensing with the use of sand baths, water baths, etc., and well adapted for drying, evaporating, boiling, etc. For very low temperatures the ring must be lighted through opening "B."  
Style..... Without Blast Pipe "C" With Blast Pipe "C"  
Each..... 1.75 2.00

23128. **Burner, Fletcher's Solid Flame.** Will boil quickly four or five gallons of water or keep a small vessel boiling steadily by simply turning the gas low.  
Diameter of flame surface, inches..... 3½ 4½  
Each..... 1.00 2.00
23132. **Burner,** same as No. 23128 but with cap-nut regulator. For use with gasoline gas.  
Diameter of flame surface, inches..... 3½ 4½  
Each..... 1.30 2.30
23136. **Extra Perforated Copper Cap** for use with Burners No. 23128 and No. 23132.  
Diameter, inches..... 3½ 4½  
Each..... .30 .35
23140. **Burners, Koch Safety.** With automatic stopcock to close off the gas when flame is extinguished. Of improved construction with spring control and very superior to those in general use. With threaded inlet for attachment of flexible metallic tubing.  
Height, inches..... 5 6  
Diameter of tube, inches..... 1/8 1/8  
Each..... 5.00 6.50
23144. **Burners, Koch Safety.** Same as No. 23140 but adjustable for height.  
Height, inches..... 9 10  
Adjustable to, inches..... 13 14  
Each..... 7.50 8.50
23148. **Burner, Koch Safety,** with weight instead of spring release. On a stand providing both horizontal and vertical adjustment; with mica chimney to protect flame from drafts. Very superior in operation to the imported article of same description and made here because of dissatisfaction with those of foreign make..... 10.00
23152. **Burner, Koch Safety,** same as No. 23148 but with two burners. Complete on adjustable stand and with two mica chimneys..... 17.50
23156. **Flexible Copper Tubing,** specially arranged to connect above Koch Burners with our American Standard Incubators, Paraffine Ovens, etc. With 1/4 inch i. p. size coupling at each end which connects with thread regularly supplied on burners and on the connecting tubes of our American Standard Incubators..... 1.00
23160. **Burner, Barthel,** for denatured alcohol; enamelled finish, with brass reservoir; smokeless, economical and a satisfactory substitute for the gas stove in laboratory work where no gas supply is available. With one burner..... 4.50
23164. **Burner, Barthel,** same as above, with two burners and one brass reservoir..... 8.50

No. 23300

No. 23300—Sectional View

**CALORIMETER, PARR STANDARD.** The marked features of this method are accuracy, simplicity, ease and rapidity of manipulation. The results are absolute and not relative. The operations are such as can be carried on by one not specially skilled in laboratory processes. Oxygen under high pressure or any pressure is not used. The time consumed in conducting a test on a weighed and dried sample should not exceed fifteen or twenty minutes. Sodium Peroxide is used as the combustion medium. The  $\text{CO}_2$  and  $\text{H}_2\text{O}$  formed in the reaction are at once absorbed by the chemical, giving a solid residue instead of gaseous products. It will at once be seen that the apparatus required is simple in construction and easy of manipulation.

23300.	Calorimeter, Parr Standard, as above described complete for Electric Ignition, complete for either lighting circuit or battery, with special thermometer 65-90° F. graduated to $\frac{1}{10}$ ° F. with Bureau of Standards certificate, 2 liter measuring flask, chemical receptacle, measuring cup, 5 inch 100 mesh brass sieve with bottom, chemical sufficient for fifty determinations, pincers, ignition wires reading lens with support, camels hair brush, etc.	75.00
23308.	Reading Lens, for reading the divisions on the thermometer. This lens uses the thermometer stem for its support, thereby maintaining the same angle of vision for all points on the scale, without support.	2.00
23310.	Reading Lens, same as No. 23308 but with support.	3.00
23314.	Bank of Resistance, for use when igniting the charge of the Electric Ignition bomb. The 110 volt outfit includes five lamp sockets, wired up in parallel together with switch and fuse block and for 220 volt two lamp sockets in series and five in parallel, with same accessories.	
	Voltage.....	110 volts      220 volts
	Each.....	5.00      5.50
23318.	Water Motor and support.....	5.00
23322.	Electric Motor, variable speed for either A.C. or D.C. voltage must be specified.....	12.00
23338.	Bomb, Electric Ignition, complete with wrench.....	30.00
23346.	Thermometer, as supplied with the outfit, 65-90° F., in $\frac{1}{10}$ ths with B. of S. certificate.....	10.00
23350.	Special Thermometer, 65-105° F., same as above.....	15.00
23354.	Accelerator, 2 oz. bottle.....	.50
23358.	Barium Oxalate, 2 oz. bottle.....	.50
23362.	Gaskets for bomb, per dozen.....	.25
23366.	Hydrene, 2 lb. can.....	1.75
23370.	Special Chemical, 2 oz. bottle.....	.75
23374.	Sodium Peroxide, a special grade. Size of can.....	$\frac{1}{4}$ lb. $\frac{1}{2}$ lb.      1 lb.
	Each.....	.65      1.25      2.00

No. 23378

No. 23378 Bomb, assembled with Spanner, Socket, Gauge and Oxygen Connection

No. 23416

23378. **Calorimeter, Parr Oxygen Bomb.** The new features consist of a bomb of a new acid resisting alloy superior in strength to the best tool steel and which obviates the use of any platinum or enamel lining; the use of rubber gaskets in place of lead and a new automatic oxygen valve. Complete with bomb, water container, insulating vessel with cover, stirrer and pulley, oxygen connection with gauge, needle valve and couplings, octagon holder for bomb, ring support for holding calorimeter covers with thermometer spanner wrench, electric motor with variable speed, direct or alternating, one-half dozen capsules of special alloy, thermometer graduated in  $\frac{1}{20}^{\circ}$  F., with U. S. Bureau of Standards certificate, reading lens and support, special ignition wire and gaskets..... 300.00

#### Accessories for Parr Oxygen Bomb Calorimeter.

23382.	Bomb only. Of acid resisting alloy.....	175.00
23386.	Water Container.....	10.00
23390.	Insulating Vessel with cover, stirrer and pulley.....	45.00

23458.	Thermometer as above, + 14 to + 25° C.....	22.50

No. 23470

**CALORIMETER, EMERSON FUEL.** This is a calorimeter of the so-called "bomb" type, with its essential elements of operation the same as the original Berthelot type. It, however, embodies improvements in design over the older types of bomb calorimeters which tend to increase the durability of the instrument and greatly facilitate its operation.

The bomb is made of steel, consisting of two cups joined by means of a heavy steel nut. The two cups are machined at their contact faces with a tongue and groove, the joint being made tight by means of a lead gasket inserted in the groove. The lining is of sheet metal spun to fit the interior. The bomb is made up tight, with a milled wrench or spanner. The pan holding the combustible is of platinum or nickel. The fuse wire should be platinum in general fuel testing. In standardizing the calorimeter by means of cane sugar, benzoic acid, etc., it is necessary to use iron fuse wire.

The jacket is a double walled copper tank, between the walls of which water is inserted. The calorimeter bucket is made as light as possible, of sheet brass.

The stirring device consists of a paddle wheel shaft enclosed in a vertical tube to facilitate its action in circulating the water. The stirrer shaft is driven by a belt from a small motor at the other end of the stirrer bracket. The motor is mounted on a sliding plate which permits of a changing position of same to vary the tension on the belt. This varying tension serves to regulate the speed of the paddle shaft by thus varying the speed of the motor. The stirrer is mounted on a post on the calorimeter jacket, as is the thermometer holder. The motor is driven by a 110 volt circuit and should be placed in series with a 16 c.p. lamp. If so desired, a motor driven by a battery can be specified in ordering the apparatus. The battery motor is driven by a six volt storage battery. The Edison-Leland Type of battery is preferred. These motors designed for the 110 volt power circuit may be driven on the other voltage provided that a proper resistance be placed in series so that the current in the circuit is one-half ampere. The motor may be driven by either direct or alternating current.

The piping for the insertion of oxygen under pressure is made especially strong and durable. The piping of small internal bore is made of heavy brass. The system is fitted with a hand nipple at one end to make the connection with the bomb, and the other end has a special fitting to grasp the oxygen supply tank. The oxygen piping of the regular Emerson Calorimeter outfit is designed to fit the oxygen cylinders sent out by the S. S. White Dental Mfg. Co. For prices see page 252. Oxygen piping to fit the oxygen cylinders of the Linde Air Products Co. can be specified in ordering the apparatus. The oxygen piping furnished to connect with S. S. White Company's cylinders is designed for two cylinders while that furnished to connect with the Linde Air Product Company's cylinders (which are considerably larger) is designed for only one cylinder. Commercially pure oxygen, free from all traces of combustible gases should be used.

The plate holder or vise is to be used when tightening the nut of the bomb with the spanner.

The table with the rotating top is to hold the bomb when the same is connected to the oxygen piping.

The spanner or wrench is a forging with 30 inch handle and is used to make bomb up with gas tight joint.

23470.	Calorimeter, Emerson Fuel, as described above, complete with steel bomb with spun nickel lining, calorimeter can, double walled calorimeter jacket, heavy piping leading to oxygen supply tank, high pressure gauge, special holder and spanner, stirrer with motor attached (battery drive can be supplied if desired) nickel pan, thermometer holder, gaskets, etc., but without thermometer.....	180.00
23474.	Calorimeter, Emerson Fuel, same outfit as No. 23470 but with gold lined copper cup instead of nickel.....	275.00
22478.	Calorimeter, Emerson Fuel, same outfit as No. 23470 but with platinum lining; (Price subject to market fluctuation of platinum).....	490.00
23482.	Nickel Lining only for Emerson Fuel Calorimeter.....	12.00
23486.	Motor only for Emerson Fuel Calorimeter.....	8.00
23490.	Thermometer, Beckmann, Goetze make, range 5° to 6° C. in $\frac{1}{100}$ , without certificate.....	15.00
23494.	Thermometer, as above, with P. L. R. certificate.....	25.00

No. 23500

**CALORIMETER, RICHE IMPROVED ADIABATIC**, designed for use in all branches of calorimetric work, i.e., the presence of heat power in coal, food or other commercial products the values of which are materially altered by impurities. The bomb is of the Kröcker type, provided with two outlets so that carbon determinations can be made. The bomb is supported by a hinged ring which is raised and lowered without touching the fingers in the water. The water jacket for the bomb consists of a vacuum cup which insures both isolation and insulation. The stirrer is of the screw propeller type and the rods are insulated by passing through hard rubber with a hard rubber cap screwed on each end. The vacuum cup containing the water is surrounded by an oak box lined with one inch pressed cork glued to the wood. On the cover, in addition to the cork is glued a piece of hair felt one-half inch thick, effecting a tight joint with the top of the vacuum cup. Ignition of the substance in the bomb is accomplished by a current from three 2-volt storage cells. The current first passes through a 3-ampere fuse wire in series with a platinum wire within the bomb itself. The platinum wire is connected with the substance to be burned by means of a linen thread of sufficient size to secure ignition. In making combustions, the substance to be burned is prepared, weighed and placed in the bomb, which, after being charged with 30 to 40 atmospheres of oxygen, is then placed in the split ring and the wires connected. The water in the vacuum cup is brought to any temperature within  $\pm 5^\circ$  of the room temperature. The thermometer is adjusted and the motor started. Readings are then taken until the temperature of the water becomes constant. The sample is then ignited by closing the switch and the readings are taken. The heat absorption is complete when the thermometer shows a constant temperature for three successive minutes. When the bomb is removed and opened and rinsed with water, the rinsings are titrated with  $\frac{N}{10}$  alkali for nitric acid, using litmus as an indicator. This calorimeter may be used with any of the standard bombs now in use. See *Journal of the American Chemical Society*, November, 1913.

23500.	Calorimeter, Riche Improved Adiabatic, complete with thermometer.....	225.00
23504.	“ “ “ “ “ without thermometer.....	215.00
23508.	“ “ “ “ “ “ or gauge.....	210.00
23512.	“ “ “ “ “ “ gauge or accessories.....	150.00

No. 23568

**CALORIMETER. FÉRY THERMO-**

**ELECTRIC**, a new application of the thermo-electric couple to calorimetry, providing the following distinct advantages in the determination of calorific power:—  
**Direct reading in calories on millivoltmeter scale.**

**Omission of water jacket, the steel bomb itself constituting the calorimetric mass.**

**Omission of mercurial thermometer with its attendant difficulty in reading.**

**Rapidity of determinations, i. e., 15 minutes.**

The bomb proper consists of a steel cylinder lined inside with nickel to prevent oxidation and surrounded on the outside with a close-fitting copper jacket "D." The bomb is supported in an outside copper cylinder "A" by means of constantan disc "E." When the millivoltmeter is connected as shown, the steel bomb, the constantan disc and the outside copper jacket constitute a copper-constantan thermoelectric couple with the hot junction at the point where the constantan disc "E" is joined to the steel bomb and the cold junction at the point where the constantan disc is attached to the outside copper jacket.

Experiments at the British National Physical Laboratory and at the Laboratoire National des Arts et Métiers, of France, have shown that with a comparatively constant weight of sample and a uniform oxygen pressure in the bomb the elevation of temperature is proportionate to the calories released in the bomb divided by the weight of the sample in grams and that in a long series of tests the error in readings on benzoic acid were found to be considerably less than 1%. As the needle of the millivoltmeter remains at the point of maximum deviation for about 15 seconds, the readings can be taken with great accuracy. The ignition is accomplished by a hot wire heated by an accumulator of 60 ampere-hour capacity at 4 volts or by a magneto. See *Génie Civil* du 25 Mai 1912.

No. 23592

No. 23596

23592. **Calorimeter for Gas, Parr.** In this instrument have been eliminated the main sources of error, i.e., the metering of gas, the radiation of heat, the variations due to the differences in the humidity of the air, the uncertainty as to the quantity of air used, the incompleteness of combustion and the inaccuracy of the numerous thermometric readings which are necessary. Determination is based upon the burning of a standard gas of known composition and heat value on one side and the unknown gas on the other, in such a manner that equal volumes under equal pressures and equal temperatures may be made to impart their heat to equal volumes of water. The heat values are, therefore, in direct proportion to the temperature readings of the two thermometers and the metering of gas thus avoided. See *Journal of Industrial and Engineering Chemistry*, August, 1910. Complete, including generator for standard gas, electric motor for driving the apparatus, thermometers, reading lens, pilot lamps, gravity tank, one 2 lb. can of Hydronc and instruction book..... 275.00

**CALORIMETER, SARGENT AUTOMATIC GAS**, for determining the calorific value and the dust, tar, moisture and solid matter in commercial and inflammable gases. The Calorimeter consists of a wet test meter in which the gas consumed is accurately measured. From this meter it flows to a governor which maintains a uniform pressure of the gas at the burner. In the calorimeter proper the accurately measured gas is burned and its calorific value is manifested in the rise of temperature of measured quantities of water flowing through. From the calorimeter proper the heated water for each unit of gas burned is automatically discharged into one of the pails in which it is weighed on the decimal scales. The pounds of water, times its rise in temperature in degrees Fahrenheit, times the quantity of gas in cubic feet consumed, gives the B. t. u. direct. The complete outfit consists of the following equipment, only one pair of thermometers, of course, being necessary.

23596. **Calorimeter Body** with automatic attachment, Bunsen burner, tubing, exhaust thermometer and beaker ..... 100.00  
23600. **Two Thermometers**, inlet and outlet. Graduated to  $\frac{1}{10}^{\circ}$ . For ordinary work..... 16.00

No. 23624 with No. 23628 and No. 23632

- CALORIMETER, JUNKERS GAS**, for continuous combustions, to determine quickly and exactly the heating value of gases and liquid fuels. For gas works, gas consumers, laboratories, manufacturers of gas motors, establishments using gas motors, etc. The heat developed from a constantly burning flame is entirely transmitted to an even flowing stream of water. This is the standard gas calorimeter throughout the civilized world. A galvanometer or millivoltmeter as regularly used with Thermocouple Pyrometers can, with slight alteration, be used in taking the readings on this instrument.
23624. **Calorimeter, Junkers Patent Gas**, including two thermometers 0-50° C. in  $\frac{1}{10}$ ths, reading lens, necessary rubber stoppers, tubing, graduated cylinders, etc., in polished case. 136.00
23628. **Gas Meter**, 3 liters, for use with above for rich gases, with two thermometers 0-50° C. in single degree divisions, measuring cylinders and case. 45.00
23632. **Gas Pressure Regulator**, for above, with extra valve and case. 18.00
- Note—The above three units constitute a complete outfit and are furnished at the sum of the prices, i.e., duty free at \$166.15 and from stock at \$199.00
23636. **Gas Meter**, for 10 liters, for pure gases, in case. 52.00
23640. **Accessory Outfit for Liquid Fuels**, consisting of precision balance, burners, etc., in case. 45.00
23644. **Thermometer** (as furnished with Junkers Gas Calorimeter), 0-50° C. in  $\frac{1}{10}$ ths. 5.00

# EXPLANATION OF DIAGRAM

**WATER METER A, GAS METER B,** which by means of a light running coupling (usually cogwheels with chain) are compelled to keep the relation between the quantity of gas and the quantity of water constant.

**CALORIMETER BODY C,** the arrangement for continuously recording the heating value which takes up the gas flame and gives off the heat developed therefrom to the stream of water continuously flowing through it.

**REGULATOR D,** which allows the water to flow to the plummet box.

**E,** which provides for a regular flow of water to the water meter.

**TWO GAS PRESSURE REGULATORS F1 AND F2** which keep the pressure in front and behind the gas meter regular within certain limits.

**DIFFERENTIAL THERMOMETER,** with connections, a thermo-element for the production of an electric current, the tension of which denotes the difference of temperature between the incoming and outflowing water.

**TWO CONTROL THERMOMETERS** for the incoming and outflowing water.

**CASE** with tightly fastened connection pipes, etc.

**CALORIMETER, JUNKERS AUTOMATIC GAS,** for the continuous measurement and recording of the heat value of gases. For gas plants, coke ovens, blast furnaces, foundries and all other establishments producing gas for light, power and heat as well as for laboratory investigations. The instrument requires no measurement of water or gas, no watching of thermometers and no calculations, the calorific value being continuously shown by a pointer. Readings can be made at points distant from the calorimeter or at several points simultaneously from one calorimeter.

23652.	Calorimeter, Junkers Automatic Gas, complete as above described, including calorimeter with thermo-electric pile, apparatus for measuring the proportions of gas and water with supply regulator, regulator for gas pressure, cupboard with glass doors and accessories and reservoir for supplying water constantly to the apparatus for measuring water, but without galvanometer.		
	Duty Free.....	313.50	Stock..... 380.00
23656.	Galvanometer, Indicating simple construction, for use with above.

Capacity, cc. 1050 1900 3230  
Diameter, mm. 110 140 170  
Height, mm. 155 180 205  
Each. 2.00 2.90 4.40
23732. Casseroles, Opaque Fused Silica, shape of 23724; glazed inside and outside, with handle.  
Capacity, cc. 30 75 150 200 350  
Each. 1.75 2.15 2.65 3.40 4.40
23736. Cement, Refractory (Vulcan Paste) Northrup. For use at the highest available temperatures. Applied as a paste for stopping up cracks, sealing holes, as a protective covering to heating wires wound on cylinders or, when thinned according to directions on jar, as a protecting paint. It is very plastic and cohesive as a paste or paint, which on heating to 200° C or more, becomes flinty hard. It is very useful in many ways for high temperature experiments in the laboratory. Per pint jar. 3.25

No. 23796

No. 23800

23784. **Cement Testing Machine, Fairbanks Automatic**, recognized as standard. Without springs or hydraulic apparatus, the action being automatic and entirely free from jars which tend to break the specimen before its greatest efficiency has been reached. The tensile strength is generally accepted as the standard, it being less difficult to obtain fair comparisons than by other methods. 1000 lbs. capacity. Size 12 x 24 inches. .... 110.00
23788. **Cement Testing Machine, Fairbank's Improved Automatic**. This machine is exactly like the above except that it is mounted on a sub-base containing a worm and worm gear connected to an axis which is threaded and passes up through the base, and hand wheel by which means a steady tension is applied to the briquette until broken. Recommended because of great increase in tensile strength of cement during recent years. Capacity 1000 lbs. .... 160.00
23792. **Cement Testing Machine, Olsen's New Automatic Shot form**. The principal advantages of this machine are as follows:  
 The machine is automatic to its full capacity and is not touched from start to finish of test.  
 The instant the briquette breaks, the breaking load is read on the dial of the scale.  
 The load is applied with absolute smoothness, and impact from falling shot is eliminated.  
 The cut-off on the shot kettle is practically instantaneous.  
 All shot that has escaped from the kettle has already done its work and the column of falling shot in the air when the specimen breaks is, therefore weighed as it should be.  
 A new grip which brings the strain uniformly on the specimen is used.  
 The briquette hangs clear of the frame of the machine, giving plenty of room for the hands when adjusting specimens.  
 This is a widely used and thoroughly satisfactory outfit; 1000 lbs. capacity, length 24 inches, height 26½ inches, weight 40 lbs. .... 125.00
23796. **Soundness Test Apparatus, Le Chatelier**. A very convenient method. .... 3.00
23800. **Cement Sampler**, for obtaining fine samples of cement from the center of a barrel. .... 7.50

23804. **Vicat Needle Apparatus, Improved form.** This apparatus does not require an extra compensating weight to give a downward pressure of 300 grams when the 1 mm needle is used (both needles are made of equal weight), thus obviating error because of overlooking the use of the compensating weight with the small needle. Complete with one mould..... 16.00
23808. **Extra Rubber Mould**..... 2.50
23812. **Extra Glass Mould**..... 1.00
23816. **Vicat Needle Apparatus, Bramwell Improved Form,** very convenient to determine the normal consistency and time of setting of cement. The plunger ends are of different diameters and the small needle when not in use can be reversed and screwed into the body of the main plunger..... 20.00
23820. **Gilmore Needle,** for determining both the initial and final set of cement. Consists of a steel needle  $\frac{1}{16}$  inch in diameter with a  $\frac{1}{2}$  lb. weight, and a needle  $\frac{1}{32}$  inch in diameter with a 1 lb. weight.. 4.00
23824. **Gilmore Needle,** same as No. 23820 but with vertical support to keep needle perpendicular to the surface of the pat..... 5.00

No. 23828

No. 23832

23828. **Cement Scale,** specially made to show the fineness of cement. Will weigh 1 lb. to .0001 lb. avoirdupois..... 13.00
23832. **Percentage Scale for fineness test,** with beam divided to 16 oz. in  $\frac{1}{2}$  oz.; also with a second row of figures reading from 0 to 100%..... 6.00

23836.	Volumenometer, Erdmenger-Mann, for the determination of the specific gravity of cement. A very accurate method, consuming much less time than the Le Chatelier, and highly recommended by leading cement engineers, complete with ten flasks	35.00	
23840.	Specific Gravity Apparatus, Jackson, for the true determination of the specific gravity of cement. Consists of a special burette with bulb and stopcock and a special flask with ground in funnel stopper of exactly the same bore as the burette. As described in the <i>Journal of the Society of Chemical Industry</i> , 15 June, 1904, No. 11, Vol. XXIII.	6.00	
23844.	Specific Gravity Bottle, Le Chatelier, as used in cement testing	2.60	
23848.	Specific Gravity Bottle, Le Chatelier, New Form, in accordance with the U. S. Bureau of Standards requirements and as used in the U. S. Government test for Portland Cement. See Circular No. 53 of the U. S. Bureau of Standards, without certificate.	3.00	
23852.	Specific Gravity Bottle, as above, but with certificate of the U. S. Bureau of Standards	5.00	
23856.	Specific Gravity Bottle, Schuman, with tube graduated to 50 cc in $\mu$ ths.	2.50	
23860.	Permeability Testing Apparatus, for determining experimentally the exact relations between the impermeability and strength of concrete, treated by the integral method. The briquettes are cylindrical in shape, 3 inches in diameter and 2 inches high. A pressure gauge is attached to the main vertical tube for indicating the pressure under which the water flows. As constructed in the Structural Material Testing Laboratory of the Brooklyn Polytechnic Institute. Complete with one mould	14.00	
23862.	Extra mould	4.00	
23864.	Cement Sample Cans, per dozen.	1.00	
23868.	Steaming Apparatus, for boiling and steaming test. Made of copper; 12 x 12 x 24 inches.	30.00	
23872.	Glass Plate, for use with briquette moulds, 24 x 24 inches.	8.00	
23876.	Pan of galvanized iron, 24 x 24 x 3 inches deep.	2.00	
23880.	Brush of brass wire with wooden handle.	.50	
23884.	Trowels, for making briquettes, etc.

23984. **Centrifuge, Water Motor, Arthur H. Thomas Co. Special**, with protected bearing which cannot become rusted and from which the oil cannot become washed out by the water. For attachment to any ordinary faucet by means of patent hose connections. The speed is under absolute control by merely turning on or off the flow of water. Runs absolutely noiselessly and may be left going constantly without attention. Each machine is furnished with necessary aluminum shield, 4 ft. of pressure tubing and patent hose connection for faucet. With patent hangers which support the aluminum shield at the lower part of the pump. Also 15 cc. graduated glass tubes, 15 cc. of oil of both aluminum and glass tubes when tubes are hung by the lip. With 2-15 cc tube holder and one each plain and graduated glass tubes, 15 cc. . . . . \$8.00

**Note.**—It is assumed in listing the accessories for our Water Centrifuge that the 2-15 cc tube head with aluminum and glass tubes will be desired and it is, therefore, necessary in order to secure the price of any special outfit simply to add the price for the various heads. If the 2-15 cc tube head included in the regular outfit is not desired a credit of \$1.00 is allowed when special outfits are made up.

24048. **Centrifuge, Water, Double Jet, Martin.** for high speeds. This form of centrifuge consists of a plate with four radiating chambers each having a depth sufficient to take a tube and its necessary holder flush with the under surface of the plate, thus avoiding all atmospheric resistance. The plate is fitted to a spindle, pivoted between an upper and lower center, and the spindle carries at its lower end a small water wheel in a "well" to which are attached the nozzle or nozzles and fittings for connecting with the water main and for carrying off the waste water. The upper center is poised lightly to avoid friction, and is mounted in a flexible holder, thus giving the necessary freedom from strain when working at high speeds. Three sizes of plates are made, carrying tubes of 25 cc, 10 cc and 5 cc, respectively. The speed has been carefully measured and a rotation of from 1000 to 5000 revolutions per minute can be maintained with ordinary pressure and with absolute safety. Complete with four German silver tube holders and 1 dozen glass tubes.

For four tubes of.....	5 cc	10 cc	25 cc

24244.	Centrifuge Cyclone, with perforated drum, for separating precipitates and crystals from their mother liquors. Widely used by sugar chemists for the determination of the yield as well as purity test. With bronze basket, 4 $\frac{1}{2}$ inches in diameter, with crank for hand power driving....	50.00
24248.	Centrifuge, Cyclone, same as above but with pulley for power driving.....	50.00
24250.	Hard Rubber Basket for handling of material which must not come in contact with the metal.....	8.00
24252.	Centrifuge, Cyclone, same as above but heavier and larger, with metal basket 8 inches in diameter with crank for hand power driving.....	100.00
24256.	Centrifuge, Cyclone, same as above but with pulley for power driving.....	100.00
24258.	Hard Rubber Basket for above.....	10.00

No. 24260

24260. **Centrifuge, Large-Universal.** with independent drive; for serological and bacteriological work where large quantities are to be handled as in separation of blood serum. Especially adapted for centrifuging a large number of small specimens at one time with head No. 24312. The variety of heads adapted for use with this machine permit its application to most lines of laboratory work requiring the use of a Centrifuge of high speed and large capacity, as in steel, rubber, sugar and oil analysis and the separation of crystals from their mother liquors. The prices given include regular motor as illustrated on next page under 24261. Regular heads with motor cups, the capacities indicated and one dozen special heavy glass tubes and endless camels, hair belt and speed indicator, but without motor.

No. 24268 Head D

No. 24268 Head E and F

### Accessories for the Large Universal Centrifuge as above.

24272.	Porcelain Perforated Drum for Head A, 175 x 140 mm .....	18.00
24276.	" " outside jacket for Head A, 240 x 210 mm .....	24.00
24280.	Glass Cylinders for Head C, 50 cc capacity .....	.60
24284.	Metal Cups, each with two circular sieves and one felt plate, for Head D, each .....	1.25
24288.	Felt Discs, per 100 .....	2.50
24292.	Graduated Glass Tubes, for Head E, 50 cc capacity, each .....	1.15
24296.	" " " " " F, 100 cc " each .....	1.30
24300.	" " " " " G, 50 cc " each .....	1.15
24304.	" " " " " H, 100 cc " each .....	1.13
24308.	Gas Tubes, for above, each .....	.10
24312.	Special Head for Serum Work, consisting of swinging rectangular boxes each carrying 12 or 24-10 cc glass tubes, particularly recommended as an accessory to the two smaller sizes of Large Universal Centrifuge.	
	Number of Tubes .....	72-10 cc 144-10 cc
	Duty Free .....	80.00 100.00
	Duty Paid .....	93.50 112.50
24316.	Centrifuge Tubes, of heavy well-annealed glass, cylindrical, with round bottom, for use in head illustrated above and as regularly supplied with the Universal Centrifuge.	
	Capacity, cc .....	50 100 200 300 400 500
	Each .....	.60 .80 1.10 1.25 1.75 2.00

No. 24320

No. 24328

24320.	Centrifuge, Electric, High Speed, König, designed especially for serological work. With heavy armour plate cover and separate motor, all mounted on the same base board. A regulating resistance permits the reduction of speed from the maximum of approximately 8000 revolutions per minute to about 2000. With speed indicator as shown in illustration. Prices quoted are for motors for 110 volts direct current. For motor for 220 volts direct current prices are increased \$5.15 duty free and \$6.85 duty paid. For alternating circuits, both voltage and number of cycles must be given and price will be quoted upon application.	
	Capacity .....	4-15 cc tubes 6-15 cc tubes 4-30 cc tubes 6-30 cc tubes
	Duty Free .....	130.00 150.00 150.00 171.25
	Duty Paid .....	157.50 182.50 182.50 207.50
24324.	Special Glass Tubes for use with above centrifuge.	
	Capacity, cc .....	15 30
	Each .....	.20 .40
24328.	Centrifuge, Delepine 1913 Model, for independent drive, having a speed of 10000 r. p. m. with a light load and of 3000 to 4000 r. p. m. with a heavy load. In order to secure lightness, strength and absence of rusting, the rotor, buckets and tubes are made of Duralumin, an aluminum alloy having the strength of steel and only one-third its weight, which Prof. Delepine has selected after testing several metals and alloys and ascertained that it was capable of resisting the stress to which it had to be submitted. This metal is but slightly affected by organic fluids such as milk and has little action upon the bacteria. He has, therefore, designed tubes of Duralumin to take the place of the glass tubes generally used. These tubes are practically indestructible and, therefore, eliminate the loss of material due to breakage of the tubes, and also permit of certain adaptations which are not possible with glass. The centrifuge consists of a Duralumin rotor of special shape allowing the maximum number of tubes to be used and securing, when the disc or rotor is rotating rapidly, the most advantageous position of the tube in regard to equilibrium and safety. For 16 tubes of 100 cc each. These tubes have flat bottoms, for standing without support, and have consecutive numbers from 1 to 16 stamped upon them. Complete, without motor.	
	Duty Free .....	435.75
	Duty Paid .....	522.90
24332.	Duralumin Tubes, 100 cc capacity.	
	Duty Free, each .....	4.65
	Duty Paid, each .....	5.60

No. 24404. Series I, Chart 3

No. 24401. Series II, Chart 3

24404. **Charts, Bacteriology, Lucksch**, a series of 18 charts, with accompanying text in German, English and French, carefully executed in colors. Series I consists of 6 charts 81 x 110 cm devoted to General Bacteriology and Series II consists of 12 charts, 80 x 106 cm, devoted to Pathogenic Bacteria.

Series I. Chart No. 1. Forms of Bacteria.

Series 1, Cult. 1.	1. Forms or Bacteria.	
" " "	2. Structure of Bacteria Cells.	
" " "	3. Capsules, Sheaths and Cilia.	
" " "	4. Division Gonidia.	
" " "	5. Reproduction by Spores.	
" " "	6. Ramification. Forms of Involution.	Plasmoptysis.

Series II, Chart No. 1.	6.	Bacillus typhi abd. Agglutination Bacteriolysis. Phagocytosis.
" " 2.	2.	Staphylococcus pyogenes. Streptococcus pyogenes. Micrococcus catarrhalis. Micrococcus tetragenes.
" " 3.	3.	Micrococcus gonorrhoeae. Micrococcus meningitidis. Diplococcus pneumoniae. Micrococcus melitensis.
" " 4.	4.	Capsule cocci. Bacillus capsulatus Friedländer. Bacillus anthracis.
" " 5.	5.	Bacillus tetani. Bacillus Chauveau. Bacillus oedematis maligni. Bacillus botulinus.
" " 6.	6.	Bacillus aerogenes Welch. Bacillus pyocyaneus. Bacillus typhi abdominalis.
" " 7.	7.	Bacillus diptheriae. Bacillus tuberculosis. Bacillus leprae.
" " 8.	8.	Bacillus influenzae. Bacillus mallei. Bacillus pestis. Bacillus cholerae gallinarum.
" " 9.	9.	Bacillus suisepitiscus. Bacillus suisepitifer. Bacillus rhusio pathiae suum.
" " 10.	10.	Aktinomyces. Bacillus necroseos. Bacillus ulceris molliis.
" " 11.	11.	Bacillus fusiformis. Vibrio cholerae. Spirillum gallinarum.
" " 12.	12.	Spirillum febris recurrentis. Spirillum framboesiae tropicae. Spirochaete pallida.

Charts, as above, Series I (6 charts), unmounted	9.00
“ “ “ “ “ “ mounted on linen with rollers	13.50
“ “ “ Series II (12 charts), unmounted	18.00
“ “ “ “ “ “ mounted on linen with rollers	27.00

24408. **Charts, Bacteriology, Roux.** These charts are prepared in the laboratories of the Pasteur Institute, Paris, and are carefully reproduced in colors. They are lithographed on heavy paper 80 x 62 cm with edges bound and with eyelets for hanging and are accompanied by explanatory text in English, French and German.

Continued on next page.

## Charts, Bacteriology, Roux (continued).

19. *Pneumococcus*—blood.  
 20. " —capsules, positive and negative.  
 21. **Plague**—  
 22. " —culture.  
 23. " —blood from spleen.  
 24. " —sneer from bubo.  
 25. " —omentum of rabbit.  
 26. " —liver.  
 27. *Bacillus Typhosus*—flagella.  
 28. " —spleen.  
 29. *Cholera*—vibrions. Flagella.  
 30. *Recurrent Fever*—blood.  
 31. *Gonococcus*—pus.  
 32. **Tuberculosis**—reaction in omentum.  
 33. " —aviare, spleen of rabbit, giant cells.  
 34. **Tuberculosis**—initial intravascular phagocytosis.  
 35. " —intravascular tubercle, 12th day.  
 36. " —perivascular tubercle (kidney) 25th day.  
 37. " —ramified bacilli. Yellow degeneration.  
 38. " —encysted bacilli. Spleen of rodent.  
 39. " —sputum.  
 40. **Leprosy**—section of skin.  
 41. **Glanders**—pus and section of lung.  
 42. **Actinomycosis**—phagocytic reaction.
43. *Diphtheria*—culture on coagulated serum.  
 44. " —sneer from fossil membrane.  
 45. " —section of trachea.  
 46. **Septic Vibrios**—flagella.  
 47. " —peritoneal exudate.  
 48. **Symptomatic Anthrax**—peritoneal exudate.  
 49. *Tetanus*—bacillus with flagella.  
 50. " —culture with spores.  
 51. " —spores in phagocytes.  
 52. **Cancer**—development of archoplasm.  
 53. " —spermatogenesis of guinea pig.  
 54. " —pseudo-coccidia.  
 55. **Small pox**—cornea of rabbit.  
 56. " —pustule in skin of monkey.  
 57. *Coccidia in rabbit*—life cycle (schematic).  
 58. " —adenoma of liver.  
 59. **Malaria**—haematozoan in fresh blood.  
 60. " —blood after staining.  
 61. " —development of *Haemamoeba relicta* in mosquito.  
 62. " —*Anopheles* and *Culex*.  
 63. **Trypanosoma in rat**—division.  
 64. " —" —agglutination.  
 65. " —" —tse-tse fly—division.

75.00

No. 24412—Kny Botanical Chart

No. 24415

24412. Charts, Botanical, Kny, on heavy chart paper, printed in colors, 69 x 85 cm, with explanatory text. The old series consists of 100 charts in sections of 10 charts each (excepting sections VI and VII), each section being furnished in a portfolio and sold only by the section. For the new series see No. 24416.

Section I, Charts I to X, in portfolio, duty free. 7.20

- I. Structure of the living plant cell and arrangement of its most important elements; the two chief kinds of protoplasmic movement inside a closed membrane, rotation and circulation and transition between the two.  
 II. Structure and development of the starch grain.  
 III. The chief forms of Calcium Oxalate crystals.  
 IV. Chief stages in the conjugation of a large species of *Spirogyra*.  
 V. Milk cells of *Euphorbia splendens* and *Lactuca sativa* L.  
 VI-VII. A few of the most important forms of one-celled hairs.  
 VIII. Longitudinal section through a dicotyledonous vascular bundle.  
 IX. Vascular bundle from the interior of the stem of *Saccharum officinarum* L.  
 X. Development of the embryo of *Brassica Napus* L.

Section II, Charts XI to XX, in portfolio, duty free. 7.20

- XI. Structure and development of the epidermis of *Ficus elastica*.  
 XII. Portion of a transverse section of a leaf of *Pinus Laricio*.  
 XIII. Stoma of *Thymus Serpyllum*, surface and transverse section.  
 XIV. Transverse section through the vascular bundle of the petiole of *Polypodium vulgare*.  
 XV. Part of a transverse section of a three year old twig of *Ilia parvifolia*.  
 XVI. Transverse section through vascular bundle from the stem of *Cucurbita Pepo*.  
 XVII. Medium longitudinal section of the rapidly growing root-tip of *Secale cereale*.  
 XVIII. Transverse section of a well developed radicle of *Secale cereale*.  
 XIX. Development of the ovule of *Oenothera biennis*.  
 XX. Ovule of *Viola tricolor* immediately after fertilization, drawn in median longitudinal section.

No. 24428

24428. Charts, Chemical Technology, von Schröder, size 106 x 78 cm. showing the more important manufacturing processes based upon chemistry. Mounted on linen with rollers.

## Series I.

- Chart 1. Production of sulphur.  
 " 2. Refining crude sulphur.  
 " 3. Preparation of nitric acid.  
 " 4. Preparation of sulphurous acid by combustion of pyrites for use in the manufacture of sulphuric acid.  
 " 5. { A. Furnace for lump pyrites.  
       B. Furnace for fine pyrites.

## Series II.

- Chart 6. Sulphuric acid factory, ground plan.  
 " 7. Sulphuric acid factory, vertical section.  
 " 8. Details in the process of manufacturing sulphuric acid.  
 " 9. Concentration of acid.  
 " 10. Preparation of fuming sulphuric acid.

## Series III.

- Chart 11. Salt Garden.  
 " 12. Graduation house.  
 " 13. Salt boiling.  
 " 14. Soda manufacture.  
 " 15. Condensation of muriatic acid.

## Series IV.

- Chart 16. } Manufacture of illuminating gas.  
 " 17. }  
 " 18. }  
 " 19. Manufacture of phosphorus.  
 " 20. System of generative heating, Siemens'.

## Series V.

- Chart 21. Gas generator.  
 " 22. Glass-potfurnace.  
 " 23. Glass-troughfurnace.  
 " 24. Glass-stretching furnace (for making plate glass).  
 " 25. Hoffman's ring furnace.

## Series VI.

- Chart 26. Lime kiln.  
 " 27. Manufacture of porcelain.  
 " 28. Manufacture of sodium.  
 " 29. Manufacture of aluminum.

## Series VII.

- Chart 31. Charring of wood.  
 " 32. Coke furnace.  
 " 33. Furnace for roasting iron ores.  
 " 34. Iron-blast furnace (Hochofen).  
 " 35. Blast super heater (Winderhitzer).

## Series VIII.

- Chart 36. Fresh fire (Frischfeuer).  
 " 37. Puddling furnace.  
 " 38. Bessemer pear.  
 " 39. Martin furnace.  
 " 40. Rolling mill.

## Series IX.

- Chart 41. Lead furnace.  
 " 42. Silver furnace.  
 " 43. Copper furnace.  
 " 44. Zinc furnace.  
 " 45. Mercury furnace.

## Series X.

- Chart 46, 47. Semet-Solvay coke ovens.  
 " 48. Pure Aluminum, Calcium Carbide.  
 " 49. Carbon Bisulphide I.  
 " 50. " II.

Charts, as above, in lots of not less than five, each duty free..... 1.35  
 " " " " " any series of five, duty free..... 6.00

24432. Chart, the Elements and their Atomic Weights, as adopted by the International Committee, 62 x 62 inches, mounted on linen..... 4.00

No. 21156

No. 21155

24456. **Charts, Paleontology, Zittel and Haushofer**, consisting of 83 charts, 100 x 140 cm, mounted on linen with rollers, illustrating fossil animals and including 8 ideal landscapes after Haushofer. The ideal landscapes consist of Charts Nos. 6, 7, 8, 9, 26 and 40, as follows:—

- Chart 6. Carbonic Era:**—Calamites, Ferns, Pecopteris, Neuropteris and other plants of this period.  
**7. Oblique Period:**—Palms, Flabellaria, Phoenixites, Anthracotrilum, etc.  
**8. Carbonic Era:**—Lagularia, Lepidodendron.  
**9. Jurassic Era:**—Sponges, Corals, Lepidodendron, Ammonites, Cycad and Pterodactyl.  
**26. Glacial Period:**—Alps showing glaciation, moraines, reindeer, tennings and mammoth  
**40. Cretaceous Era:**—Cypress, Arancaria, Segouia, Cretneria, Iguanodon.

The contents of the entire series is given below, with the chart numbers:—

Chart		Chart	
Amblypoda	56.	Knidaria	75.
Amphibia	42, 43.	Lamellioranchiata	18, 32, 33.
Anthozoa	3, 4, 75.	Litopterna	66.
Artiodactyla	30, 31, 82, 83.	Mammalia	54, 55, 56, 57, 58, 61, 62, 63.
Artiodactyla	67, 68, 69, 70.	Mammalia	64, 65, 66, 67, 68, 69, 70, 71, 72.
Aves	53.	Mammoth Hot Springs, Yellowstone Park	20.
Blastoidea	12.	Marsupialia	54.
Brachiopoda	5, 17, 77.	Mollusca	18, 19, 21, 22, 23, 24, 25, 26.
Bryozoa	16.	Mollusca	28, 29, 32, 33, 78, 79, 80, 81.
Carnivora	71, 72.	Molluscoidea	5, 16, 17, 77.
Castle Geyser	41.	Palechinoidea	13.
Cephalopoda	19, 21, 22, 23, 24, 25, 27, 28, 78, 79, 80, 81.	Perissodactyla	55, 64, 65.
		Phytanomorpha	48.
Cheilostomata	16.	Pisces	34, 35, 36, 37, 38.

 " Nos. 6, 7, 8, 9, 26, 40 and 74 to 83, each duty free. 1.80  
 " Nos. 20 and 41, each duty free. 2.10  
 " Complete set, Nos. 1 to 83, duty free. 138.30

No. 24480. Series I, No. 27

No. 24480. Series I, No. 102

# Charts, Zoology, Leuckart-Chun (continued).

## Class—Sporozoa

### Order—Gregarinida

- Series I, Chart 23. Polycystidea, Monocystidea, Actinocephalus oligocanthus, Gonospora terbellas, Clepsidrina polymorpha, Urospora, Nemeritis, Clepsidrina blattarum, Stylophorus longicollis, Gamocystis tenax, Coccidiida among the Monocystidea.

### Order—Haemosporidia

- Chart 102. Life-cycle of Plasmodium praecox, showing sporozoite, schizont, schizogonia (merozoites), macrogamete, microgametoblast, oökinete, microgametes, oöcyst, sporoblasts, and various intervening stages and processes—Anopheles claviger,—female, head of male, larva, nymph, stomach with oöcysts, cross-section of saliva duct with sporozoites of Plasmodium.

### Order—Coccidiida

- Chart 103. Life-cycle of Coccidium schubergi, parasitic in Lithobius forficatus, showing sporozoites, schizont, merozoites, macrogamete, microgametoblast, microgametes, oöcyst, sporocyst, and various intervening steps. Development stages of Adeles ovata, showing microgametocytes, etc. Section of liver of rabbit with Coccidium oviforme. Section of kidney of snail with Klossia helicina.

## Class—Infusoria

### Orders—Flagellata, Choanoflagellata

- Series I, Chart 75. Mastigamoeba aspera, Goucomonas termo, Nonas guttula, Cercomonas longicauda, Anthophysa vegetans, Synura uvella, Tetramitus rostratus, Mesostoma intestinalis, Trichomonas vaginalis, Haematococcus, Euglena spiroyra, L. viridis, Urochloa alenizini, Trachelomonas lipidica, Chilomonas paramecium, Dinobryon sertularia, Anisocoma grande, Cryptomonas ovata, Polytoma uvella, Codonisma botrytis.

### Orders—Flagellata, Dinoflagellata, Cystodagellata

- Chart 76. Volvox globator, Goniodoma acuminata, Ceratium hirundinella, Glenodinium cinetum, Ceratium furca; Dinophysa acuta, Gymnodinium spirale, Noctiluca miliaris.

### Order—Ciliata

- Chart 65. Holotricha, Heterotricha, Hypotricha;—Parodon teres, Cyclidium glaucoma, Colpoda cucullus encysted, Paramecium caudatum, Frontonia leucas, Paramecium putrinum; Stentor polymorphus, S. coerules; Chart 67. Oligotricha, Peritricha;—Tintinnopsis heroides, Dictyocysta tiara; Carclessium polypinum, Vaginicola longicollis, Vorticella microstoma, Spirochona gemmipara.

### Order—Suctorina (=Ainetaria)

- Chart 68. Podophrya fixa, P. libera, P. quadripapilla, Ephelota gemmipara, Dendrocometes paradoxus, Dendrosoma radicans, Ainetaria tuberosa, Stylonychia mytilus with parasitic Sphaerophryae, Ophryodendron abietinum.

## II. TYPE—COELENTERATA (ZOOPLANKTON)

### Sub-type—Porifera Sponges

## Class—Spongiae

### Order—Fibrospongiae

- Series I, Chart 35. Myos pongia, Ceratospongia, Monadenellidae;—Haliarea dujardini, Euspongia officinalis, Hircinia setosa, Aplysilla tenella, Derocella aurea, Spongia lacustris, S. fluviatilis, S. lieberkühni, Rinalda arctica, silicious spicules of Monactinellidae.

## Charts, Zoology, Leuckart-Chun (continued)

## Order—Tetraetnelidae

- Series I, Chart 47. Tethya maza, Tetilla polyura, Tisiphonia fenestrata, Agilardiella radiata, Corticium candelabrum, Plakina monoplota, Geodia placenta, Caminus vulcani, Plakina triplota, Stelletta mammillaris, Corticium versatile, Ancorina verrucosa, Tisiphonia agariciformis, Chondrilla phylloides.

## Order—Lithistidae

- " Chart 52. Leiodermatium lynceus, Selischothorhonelleides, Discoderma calyx, D. japonica, Corallistes pratii, Kaliopsis cidaris, spicules.

## Order—Hexactinellidae

- " Chart 50. Hyalonema mirabile, Holtenia carpenteri, Pheronema hemisphaericum, Rossella velata, Pheronema annae Crateromorpha, Apuleiella subulera, E. aspergilum, characteristic spicules.

- " Chart 50. *Lyssacina*.—Antiochone cylindrica, Rhabdodictyum, delicatum; *Dictyonina*.

## Order—Calcispongiae

- " Chart 54. Olynthus primordialis, Asclatis gegenbauri, Sycurus primitivus, various forms of spicules, Sycandra raphanus.

## Sub-type—Cnidaria (Corals, etc.)

## Class—Hydrozoa

## Order—Hydroidea

- Series I, Chart 16. Hydra viridis, H. fusca, Cordylophora lacustris, Podocoryne carnea, Corymorpha nutans; diagrammatic sections of typical Hydroids.

- " Chart 20. Hydra viridis, Hydra vulgaris var. aurantiaca, Hydra grisea.

## Order—Hydromedusae

- " Chart 18. Carmarina hastata, C. fungiformis, Hippocrene supercilialis, Bougainvillea supercilialis.

## Order—Siphonophora

- " Chart 96. Agalma sarsi, siphonophores of the family Calyceporidae, Praya galea, Ahlya pentagona, Eudoxia cuboides, Monophyes primordialis, Eudoxia eschscholtzi Halimastemma pictum, Diphyes sieboldii.

## Order—Acletothecae (Jelly-fish)

- " Chart 64. Aurelia aurita.—Mastula fixed with commencing stomodaeum, polyp with 4 tentacles, with 8 tentacles, Scyphistoma with 16 tentacles, Strobila with only one Ephyra, Scyphistoma with 6 segments; Aurelia flavidula.

## Class—Anthozoa (Corals)

## Order—Octactinia (= Alcyonaria)

- Series II, Chart 1. Single zooid of an Octactinian; Corallium rubrum.

- " I: Chart 94. Pennatulid phosphores, Renilla reniformis, cross section of a polyp, cross-section of stalk of Pennatula.

## Class—Ctenophora

- " Chart 74. Hormiphora plumosa, Bolina hyalina, Cestus veneris, Vexillum parallelum, Beroe ovata, Beroe forskalii.

## III. TYPE—ECHINODERMATA

- Series I, Chart 79. *Development of the Larval Forms of Echinoderms*: Simplest larval form, Development of the Holothurian larva Auricularia, of the Asteroid larva Bipinnaria, and of the Pluteus larva.

- " Chart 80. Development of Holothuria tubulosa, Cucumaria dolioleum, Synapta digitata, Echinus miliaris, Arbacia, Asterina gibbosa.

## Sub-type—Pelmatozoa

## Class—Crinoidea

## Order—Brachiata

- Series I, Chart 5. Rhizocrinus lofotensis. Small individual, crown of a full-grown specimen, calyx from above, section of crown section through an arm.

- " Chart 7. Antedon rosaceus.—Full-grown animal, calyx from dorsal side, arrangement of fibrous strings, larvae.

## Class—Blastoidea

## Order—Regulares

- Series I, Chart 46. Pentremites sulcatus, P. pyriformis, P. godoni, Codaster hindei, Orophocrinus stelliformis, Granatocrinus derbiensis;

## and Order—Irregulares

- " " Astrocrinus henniei.

## Sub-type—Asterozoa

## Class—Ophiuroidea

- Series I, Chart 59. Ophiura, Ophiocoma, Ophiomyxa, Ophiotrix, Ophioglypha, Ophiarachna.

## Class—Asteroidea (Starfishes)

- Series I, Chart 86. Asteracanthion rubens, pedicellaria, Astropecten hemprichii, Echinaster sentus.

## Sub-type—Echinozoa

## Class—Echinoidea (Sea-urchins)

- Series I, Chart 81. Sea-urchin with lower floor removed, Arabic punctulata, Echinus acutus, Dorocidaris papillata, Arbacia pustulosa.

## Class—Holothuroidea (Sea-cucumbers)

- Series I, Chart 61. Anatomy of a Holothurian of the family Aspidochirotae: gullet of a dendrochirote Holothurian and of Synapta; Holothuria impatiens, Cucumaria, Chirodota.

## IV. TYPE—VERMES (WORMS)

## Class—Platodes

## Order—Trematoda

- Series I, Chart 62. Tristomum coccineum, T. papiliosum, Gyrodactylus elegans, Polystomum integerrimum, Octobothrium lanceolatum, Diplozoon paradoxum, Dipora.

- " Chart 33. Distomum hepaticum, Distomum lanceolatum.

- " Chart 73. Distomum macrostomum, D. clavigerum, Cercaria macrocerca, D. echinatum.

## Order—Cestoda

- " Chart 15. Taenia saginata, Taenia solium.

- " Chart 44. Bothriocephalus latus, Tetrahyrnichidae, Caryophyllaeus mutabilis.

- " Chart 99. Development of Taenia echinococcus, adult Taenia, genital organs of a young segment, Cysticercus condition Coenurus cerebralis; Taenia serrata; Cysticercus pisiformis, headhooks on the Cysticercus, head young Taenia serrata; development of the Cystoid tapeworms, Taenia cucumerina, young segment of same, Cysticercoid egg of same, Cysticercus arionis, etc.

# Charts, Zoology, Leuckart-Chun (continued)

- " Chart 28. Planaria polychroa, Dendrocoelum lacteum, Eurylepta orbicularis, Vortex viridis, Mesostomum ehrenbergi. Microstomum lineare.

- " Chart 39. Nemertes neesii, Amphiporus lactifloreus, Tetrastemma flavidum, development of Nemertes out of the Piliolum Lineus obscurus.

## Class—Nemathelminthes

### Order—Nematoda

- Series I, Chart 31. Ascaris lumbricoides, Oxyurus vermicularis, Dochmius duodenalis, D. trigonocephalus, Anguillula intestinalis.  
" Chart 66. Trichocephalus dispar, T. affinis, Trichosomum crassicauda, Trichina spiralis, meat containing Trichina.  
" Chart 49. Heterodera schachtii.

### Order—Acanthocephala

- " Chart 100. Male Echinorhynchus gigas, male Echinorhynchus angustatus, female genital apparatus of E. gigas nephridia of same, oviduct of E. angustatus, and ligamentum suspensorium, section through ovary, egg of E. moniliformis, embryo of E. gigas and of E. angustatus, larvae.

## V. TYPE—ANNELIDA (ANNELIDS)

### Class—Chaetopoda

#### Order—Polychaeta

- Series I, Chart 56. Eteanidia—Nereis (Leontis) dumerili, Heteronereis oerstedii, Nereis pulsatoria, N. striolata, Aciopa can trainii, Tomopteris euchaeta.  
" Chart 57. Selenasteria—Arenicola piscatorum, Phyllochaetopterus major, Spirorbis laevis, Serpula vermicularis, Sabellaria alveolata, Pycnogonanthus protensus, Myxicola infundibulum.

#### Order—Oligochaeta

- " Chart 19. Lumbricus riparius, L. agricola, Criodrilus lacuum, Lumbricus communis, L. olidus, Lumbricus trapezoides, on Chart 24 following.

### Class—Hirudinea = Discophora

- Series I, Chart 24. Hirudo medicinalis, Piscicola.

### Class—Gephyrea

#### Orders—Sipunculoidea, Echiuroidea

- Series I, Chart 55. Sipunculus nudus, Echiurus pallasi, Bonellia viridis, Sternaspis spinosus, Actinotrocha-larva of Phoronis.

### Class—Rotifera, incl. Gasterotricha

- Series I, Chart 51. Hydratina senta, Stephanoceros eichhorni, Melicerta ringens, Rotifer vulgaris, Notommata sieboldi, Chae-tonotus maximus.

## VI. TYPE—MOLLUSCOIDEA

### Class—Bryozoa

#### Orders—Endoprocra, Ectoprocra

- Series I, Chart 34. Pedicellina echinata, Flumarella repens, stages of statoblasts of Aleyonella fungosa in section, Aleyonidium mytili, Bowerbankia densa, Acamarchis avicularia, Flustra membranacea.

### Class—Brachiopoda

#### Order—Testicardines

- Series I, Chart 98. Waldheimia australis, and anatomy, Terebratulina vitrea, Argiope neapolitana, larva, Terebratulina minor, Argiope kowalevskii;

- " Chart 101. Lingula anatina, and Order—Ecardines  
Lingula anatina.—Anatomy in detail.

## VII. TYPE—MOLLUSCA (SHELL-FISHES)

### Class—Lamellibranchiata (Bivalves)

#### Order—Asiphonida

- Series I, Chart 12. Margaritana margaritifera, development of Unio pictorum.

- " Chart 60. Ostrea edulis.—longitudinal sections, cross-section of larva ready to swarm, side view of same, heart, blood corpuscles, ball of sperms, spermatozoon, and mature eggs.  
" Chart 77. Pecten jacobaeus, Arca none, Mytilus edulis, Spondylus gaederopus.

#### Order—Siphonida

- " Chart 89. Cardium tuberculatum, pericardial chamber of Venus verrucosa, Pholadidea, Teredo and larva, hinge of Trigonina, Chondrophore of Mya truncata.

### Class—Scaphopoda (Tooth shells)

- Series I, Chart 92. Anatomy and development of Dentalium entalis.

### Class—Gastropoda (Univalves)

#### Order—Pulmonata

- Series I, Chart 30. Anatomy of Helix pomatia. Helix nemoralis, Linnaea stagnalis, arion empiricorum.

#### Order—Opisthobranchiata

- " Chart 8. Pontolimax capitatus, Eolis, Doris, Polyera quadrilineata, Pleurobranchus, Aplysia punctata.

- " Chart 43. Creseis acicula, Cymbula peroni, larva, Clione borealis, Clionopsis krohni, larva of Clione and Paeumodermon, Firola (Pterotrachea) coronata, Firolaides leseuri, Atlanta peroni.

### Class—Cephalopoda

#### Orders—Tetrabranchiata and Dibranchiata

- Series I, Chart 14. Anatomy of Octopus vulgaris, head-cartilage of Sepia officinalis, brain of Sepia, section through eye of Sepia and of Nautilus pompilius.

- " Chart 36. Nautilus pompilius, Spirula prototypus, shell of Spirula peroni, male Argonauta argo, female of same, heterocotylus of Octopus tarento, spermatophore of Sepia officinalis.

## VIII. TYPE—ARTHIROPODA

### Sub-type—Branchiata

#### Class—Crustacea

#### Sub-class—Entomostraca

##### Order—Phyllopoda

- Series I, Chart 26. Apus canceriformis, Apus proutii, Branchinecta stagnalis, Daphnia pulex, Polyphemus oculis.

##### Order—Copepoda

- " Chart 25. Canthocamptus minutus, Cyclops canthocamptoides, Cyclops tenuicornis, Acheres percarum, Argulus foliaceus.

##### Order—Cirripedia

## Charts, Zoology, Leuckart-Chun (continued)

- Series I, Chart 87. Anatomy and development of the *Lepadidae*.—Lapas anatifera, entire section, embryo, Cypris stage, section of further developed Lepas, ripe young Lepas. Anatomy and development of the *Balanidae*.—Balanus tintinnabulum, Nauplius larva of Balanus balanoides, Cypris stage, young Balanus; Ibla cumingi. *Rhizophlata*.—Carcinus maenas with a mature Sacculina carcini *in situ*; development of the Sacculina, Nauplius stage, first moult, Cypris stage, Cypris working its way into the body of the crab, young Sacculina, older Sacculina interna, cross section, longitudinal section, mature Sacculina externa.

## Sub-class—Malacostraca

## Order—Stomatopoda

- Series I, Chart 95. Squilla mantis.—Adult, side view, back view cut open, transverse section through abdomen, mouth parts, three stages in development, Eriethoid larva, older Squilloid larvae.

## Order—Decapoda

- “ Chart 91. *Macrura*.—Larval history of Penaeus, Nauplius, youngest Zoea stage, older Zoea larva, older Panaeus larva, same more developed; Zoea forms of other Decapoda, of Galathea, of Pagurus; young Homarus and larva; larva of Astacus fluviatilis. *Brachyura*.—Youngest Zoea of Thia, older Zoea of Maia.
- “ Chart 92. Astacus fluviatilis.—Longitudinal section of male, section of cephalothorax, mouth parts, stomach, circulatory system, male genital apparatus, female genital apparatus, section through eye, inner antenna.

## Order—Arthropoda

## Sub-order—Isopoda

- “ Chart 3. Asellus aquaticus.—male, central nervous system, female, anatomy, embryo; Porcellio scaber.—animal groups of segments, incubatory pouch.
- “ Chart 88. Eutoniscidae.—Development of Capon elegans, second larval form, male and female, ventral views; female, dorsal view; Postunio maenadis, P. kosmanni, Cancrion miser.

## Sub-order—Amphipoda

- “ Chart 4. Gammarus neglectus, Pheonima sedentaria, Caprella.

## Class—Acerata

## Sub-class—Merostomata

## Order—Xiphosura

- Series I, Chart 90. Limulus polyphemus.—Longitudinal section of body, transverse section of cephalothorax, of female Limulus, circulatory and nervous systems, genital organs, young Limulus.

## Sub-class—Arachnida

## Orders—Scorpiones, Pseudoscorpionida, Cyphophthalmida

- Series I, Chart 45. Inner structure of Butkus; Buthus afer, B. ocellatus, Scorpio italicus, Chelifer cancrionides, Gibocellum sudeticum.

## Order—Araneida

- “ Chart 42. Inner structure of a female dipneumon Araneid; Epeira diadema, Segestria senoculata, Tegenaria, Zilla calophylla, Anyphaena accentuata, Philocea domestica, Agalena labyrinthica.

## Order—Acarina

- “ Chart 48. Metamorphosis of Trombidium fuliginosum; Tyroglyphus siro, Trichodactylus anonymus.
- “ Chart 58. Sarcopotes scabei var. hominis, S. mutans, Chloroptes spatuliferus, Psoreptes longirostris, Analges pauciserratus, Desmodex folliculorum.

## Order—Linguatulida

- “ Chart 63. Linguatula (Pentastomum) taenioides, Pentastomum denticulatum, P. torquatum, P. multicinctum, P. constrictum.

## Sub-type—Tracheata

## Class—Protracheata

## Class—Myriopoda

## Orders—Chilopoda, Symphyla, Pseudoscorpionida

- Series I, Chart 32. Lithobius forficatus, Scolopendra bitorata, S. complanata, Geophilus, Scolopendrella, Pseudoscorpion.

## Orders—Diplopoda, Onychophora

- “ Chart 38. Polodesmus complanatus, Lysipetatum insculptum, Tulus londinensis, Glomeris marginata, Strongylosoma guerini (also Peripatus capensis).

## Class—Insecta

## Order—Orthoptera

- Series I, Chart 11. Migratory locust, Eulipoda stridula, body of Acridium tartaricum, mole-cricket, grass-hopper.
- “ Chart 22. Pelariu, Ephemeridae, Libellulidae, Agrion puella.
- “ Chart 83. Ternes lucifugus, Euternes from Borneo, Termes from Java.

## Order—Rhynchoptera

- “ Chart 17. Phylloxera vastatrix.—Vine leaf covered with galls of Phylloxera, development, apterous sexual generation, male and female generation, root-attacking generation and egg, winged generation, subterranean pupa. Map of France showing distribution of Phylloxera.

## Order—Neuroptera

- “ Chart 9. Megaloptera, Chrysopa flavifrons, Trichoptera, Strepsiptera.

## Order—Coleoptera

- “ Chart 6. Potato beetle (Leptodermis decemlineata).
- “ Chart 78. Hylesinus piniperda, Bostrychus typographus, galleries in trunk of a fir tree, Bostrychus laricis, Eucoryptus scolytus, Clerus formicarius.
- “ Chart 84. Organs and metamorphoses of European May-beetles (Melolontha vulgaris and M. hippocastani).

## Order—Diptera

- “ Chart 70. Musca (Calliphora) vomitoria. Sarcophaga carnaria, Musca domestica.

## Order—Lepidoptera

- “ Chart 21. Cabbage Butterfly (Pieris brassicae), Goat Moth (Cassus ligniperda), caterpillar of Bombyx pini, silk glands, etc., head of larva of Aporia crataegi, head of imago of Sphinx pinastri, scales from butterfly's wings, alimentary canal of imago of Sphinx atropos, egg of Smerinthus populi showing micropyle.

## Order—Hymenoptera

- “ Chart 41. Galls, adult insects etc., of certain Gall-wasps of the oak.
- “ Chart 27. Honey bee (Apis mellifera).
- “ Chart 97. Anomalon circumflexum, Gastropacha pini, Microgaster nemorum, Teleas phalae nrsrum, larva of Platygaster.

## IX. TYPE—CHORDATA (VERTEBRATES)

## Sub-type—Acrania

## Class—Hemichordata

- Series I, Chart 93. Balanoglossus kowalewskii.—Development, organization of larva.

## Class—Tunicata (Urochordata)

## Sub-class—Copeleda (Larvacea)

- Series I, Chart 71. Appendicularia and tadpoles of Ascidiae, Oikopleura cophocerca, Stegosoma pellucidum, Clavellina lepadiformis.

# Charts, Zoology, Leuckart-Chun (continued)

## Sub-class—Ascidacea

- Series I, Chart 53. Anatomy of *Ciona intestinalis*, *Corella parallelogramma*, *Clavellina padiformis*, development stages of the simple Ascidians.

## Sub-class—Thaliacea

- Series I, Chart 40. *Doliolum mülleri*, *D. ehrenbergi*, *Salpa pinnata*, *Salpa democratica-mucronata*.

## Class—Cephalochordata

- Series I, Chart 72. Development of *Amphioxus lanceolatus*.

## Sub-type—Craniata

### Class—Pisces

- Series II, Chart 1. Electric organs of *Torpedo marmorata*, *Gymnotus electricus* and *Malapterurus electricus*, pseudo-electric organs of *Mormyrus* and *Raja clavata*.

### Order—Elasmobranchii

- Series II, Chart 2. Embryonic development of *Plagiostomata*: Belfour's stages B to K.  
 " Chart 3. Sections of early stages (to stage C.)  
 " Chart 4. Sections of later stages (from stage D.)  
 " Chart 12. Skeletons of *Acanthias*, dorsal and side view of skull of *Notidanus cinereus*, tooth of *Acanthias* and of *Notidanus*. (Double chart).

### Order—Dipnoi

- Series II, Chart 10. Various specimens of *Ceratodus*, *Protopterus annectens*.

## Class—Amphibia

### Orders—Anura, Urodela

- Series II, Chart 5. Embryonic development of *Rana temporaria* and *Triton*, in detail, earlier stages.  
 " Chart 9. Embryonic development of *Rana temporaria*, *R. esculenta*, *Bombinator*, and *Triton*, later stages (in continuation of preceding chart).  
 " Chart 69. Metamorphosis of the Common Frog (*Rana temporaria*).  
 " Chart 6. Skeletons of *Batrachia*, *Rana temporaria*, *esculenta* and *tigrina*, details.  
 " Chart 11. Intestinal tract of larval *Pelobates fuscus*, and *Rana esculenta*, jaw of last, dissection of pyloric tract, pharynx of newly hatched *Bufo vulgaris*, etc.  
 " Chart 10. Vascular system of amphibia,—aorta with branchiae, heart and arteries, venous system, section of heart of frog.  
 " Chart 8. Nerve system,—brain and spinal cord of *Rana temporaria*, sections of brain, sympathetic system, brain of larva of *Bombinator igneus*, spinal cord of *Rana esculenta*, sense organs of lateral line of head of larval *Triton taenias*.  
 " Chart 7. Urogenital system of Amphibia,—segment-canal from kidney of larval *Siphonops*, urogenitalia of male *Rana temporaria* and *R. esculenta*, and of female of either species, diagrams of male and female urogenital systems of *Triton taenias*.

## Class—Mammalia

### Order—Primates

- Series II, Chart 37. *Gorilla eugena*, skull of adult male *Gorilla*, head of adult male *Chimpanzee*, skull of an adult male *Orang-outang*, head of *Semnopithecus nasicus*.

No. 21181

No. 24490

No. 24496

24484. Chronograph, registering, with electric motor and regulator after Thury, with three speeds, i.e., one rotation every minute, one every ten seconds, or one every second; electro marking magnets with two writing pens, all mounted on carriage with variable speed. A precision instrument for the graphic recording of any laboratory experiments requiring the measurement of small time.  
 Duty Free..... 300.00 Duty Paid..... 375.00  
 24486. Chronoscope, Hipp, with two dials, reading to  $\frac{1}{1000}$ th of a second; clock-work operates for one minute.  
 Duty Free..... 96.00 Duty Paid..... 120.00  
 24488. Chronoscope, Hipp, as above, but on wooden base with levelling screws.  
 Duty Free..... 90.00 Duty Paid..... 112.50  
 24490. Chronoscope, Hipp, large model, operating 6 minutes from one winding; on column support.  
 Duty Free..... 156.00 Duty Paid..... 195.00  
 24492. Chronoscope, Hipp, as above, but on wall bracket.  
 Duty Free..... 144.00 Duty Paid..... 180.00  
 24496. Chronoscope, Ewald, for counting rapid interruptions in electric current, such as from an electrically driven tuning fork, etc.; dial divided from 1 to 100; pointer may be set instantly to zero after each reading.  
 Duty Free..... 50.40 Duty Paid..... 63.00

- 24678. Clamp**, for thermometers, burettes, conductivity vessels, etc. The advantage of this clamp is that the same spring which clamps the article to be held in a vertical position, i. e., thermometers, etc., serves also to clamp the support on which the clamp is used, thus obviating the use of any screws. The clamps are of spring brass, heavily nickel plated and are kept in stock to fit vertical supports of 6 mm, 8 mm and 10 mm.
- To fit support, mm..... 6 8 10
- Each..... .90 .90 .90
- 24682. Clamp**, as above, with handle, for holding test tubes, small flasks, etc..... 1.15
- 24686. Extension Holder** with clamps as above to fit 6 mm support.
- Number of clamps..... 1 2
- Each..... 1.10 2.00
- 24690. Clock (Thayer Interval Timer)**, new model with bell entirely enclosed in brass case. Very convenient in timing continuous laboratory operations..... 4.75

### COLOR TESTING APPARATUS.

- 24702. Color Comparison Tubes, Eggertz**, for the estimation of carbon and manganese in steel by the colorimetric method.
- Capacity, cc..... 30 50
- Graduated in, cc.....  $\frac{1}{10}$   $\frac{1}{10}$
- Per set of two..... 2.50 2.75
- " " four..... 5.00 5.50
- 24706. Color Comparison Tubes, Julian**, same as No. 24702 but with bent ends. The bent end permits the mixing of the contents without the use of a stopper in the tube. The lower portion of the tube is ungraduated.
- Graduated from, cc..... 5 to 30 10 to 50
- Graduated in, cc.....  $\frac{1}{10}$   $\frac{1}{10}$
- Per set of two..... 2.75 3.00
- " " four..... 5.50 6.00
- 24710. Color Comparison Tubes, Camp**, for manganese determinations.
- Per set of two..... 6.00
- 24714. Color Comparison Tubes, Nessler**, of special colorless glass, usual form. Height of 50 cc mark in 50 cc tubes 120 mm, height of 100 cc mark in 100 cc tubes, 150 mm.
- Graduation, cc..... 50 100 50 and 100
- Each..... .50 .60 .70
- 24718. Color Comparison Tubes, Nessler, American Public Health Association**. With polished bottoms and 50 cc mark 210 mm high on 50 cc tube, and 100 cc mark 325 mm high on 100 cc tubes. Tubes in selected sets of six or twelve guaranteed to have either 50 cc or 100 cc marks within 6 mm of same height. See American Public Health Association "Standard Methods of Water Analysis," 1912.
- Graduation, cc..... 50 100 50 and 100
- Each..... .50 .75 .90
- Per set of six..... 3.15 4.75 5.70

## LOVIBOND'S TINTOMETER

Note—Because of the great variety of combinations possible we do not carry these outfits in stock. Delivery can be made by importation usually in from three to five weeks. Manufacturer's original publication with full descriptive matter sent upon request.

24806.	Colorimeter (Lovibond's Tintometer) improved optical instrument for both monocular and binocular vision.	Duty Free.....	12.60	Duty Paid.....	16.50
24810.	Colorimeter (Lovibond's Tintometer) optical instrument, monocular only, arranged in case for factory use to prevent standards from being handled.	Duty Free.....	18.90	Duty Paid.....	25.20
24814.	Colorimeter (Lovibond's Tintometer) improved optical instrument with hot water attachment for liquidating solids below 212° F.	Duty Free.....	22.50	Duty Paid.....	30.00
24818.	Complete Set of Standard Glasses for Lovibond's Tintometer, 470 glasses in set for matching all colors.	Duty Free.....	282.00	Duty Paid.....	376.00
	Accessories for Lovibond Tintometer.				
24822.	Extra Shoe, to carry cells up to 6 inches.	Duty Free.....	2.25	Duty Paid.....	3.00
24826.	Stand for either No. 24806, 24810 or 24814.	Duty Free.....	3.75	Duty Paid.....	5.00
24830.	Stand, rigid, with support, to take cells up to two feet.	Duty Free.....	3.75	Duty Paid.....	5.00
24834.	Extra Support, making the above suitable for cells of any length.	Duty Free.....	2.25	Duty Paid.....	3.00
24838.	Mirror, white reflecting, for long troughs.	Duty Free.....	3.75	Duty Paid.....	5.00
24842.	Mirror, white reflecting, mounted on jointed brass stand.	Duty Free.....	9.00	Duty Paid.....	12.00
24846.	Metal Trough, with glass ends either silver plated or of brass.				
	Gauged, inches.....		$\frac{1}{8}$	1	12
	Duty Free.....		3.00	3.75	7.50
	Duty Paid.....		4.00	5.00	10.00
	Combination Outfits for specific purposes.				
24850.	Lovibond Tintometer Set for brewers, maltsters, sugar and caramel manufacturers, wine and spirit merchants, etc., including the improved optical instrument No. 24806 box with stand and reflector, 1 inch, and $\frac{3}{8}$ inch silvered cells, filtering apparatus and 20 standard glasses, series 52 and 50; as recommended by the Council of the Institute of Brewing in their Malt Analysis Report "Colored Malts and Caramel."	Duty Free.....	37.50	Duty Paid.....	50.00
24854.	Extra Apparatus for estimating the color of dry malt, consisting of 33 standard glasses, with trays, presser and standard white.	Duty Free.....	17.40	Duty Paid.....	23.20
24858.	Lovibond Tintometer Set for estimating the color in water, including the monocular optical instrument No. 24810, box with supports and reflector, 2 ft. and 1 ft. brass cells and forty standard glasses.	Duty Free.....	63.60	Duty Paid.....	84.80
24862.	Lovibond Tintometer Set for estimating percentage of Ammonia in Nessler's Ammonia Test, including the improved optical instrument, No. 24806, box with stand and reflector, $\frac{1}{2}$ inch glass cell, with 30 standard glasses.	Duty Free.....	36.00	Duty Paid.....	48.00
24866.	Lovibond Tintometer Set for estimating Carbon in Steel, including the improved optical instrument No. 24806, box stand and reflector, $\frac{1}{2}$ inch cell and 34 standard glasses series 52, and 26 glasses series 50.	Duty Free.....	48.00	Duty Paid.....	64.00
24870.	Lovibond Tintometer Set for estimating the color in oils, waxes, lards and other fats, varnishes, gelatine, scale, etc., including the improved optical instrument fitted with hot water attachment for melting solids, No. 24814, thermometer for taking their melting point, box, 1 inch, $\frac{1}{2}$ inch and $\frac{1}{4}$ inch silvered cells, without standard glasses.	Duty Free.....	40.50	Duty Paid.....	54.00
24874.	Lovibond Tintometer Set, simple form, for estimating color in cotton seed oil, fitted with standard oil bottle and compound glass and set of 24 standard cotton seed oil glasses.	Duty Free.....	20.40	Duty Paid.....	27.20
24878.	Lovibond Tintometer Set, for estimating the color in cotton seed oil, including the improved optical instrument No. 24814 fitted with lamp and hot water attachment for liquifying the oil and maintaining a given temperature, $\frac{5}{8}$ inch cell and 36 standard glasses.	Duty Free.....	57.00	Duty Paid.....	76.00
24882.	Lovibond Tintometer Set for standardizing merchantable petroleum, including the monocular optical instrument No. 24806, box with stand and reflector, 18 inch silvered cell, 4 special standard glasses for water white, standard white, superfine white and prime white.	Duty Free.....	33.00	Duty Paid.....	44.00
24886.	Extra Apparatus for Intermediate, Russian and Lubricating oils, containing $\frac{1}{8}$ inch silvered cell and 5 additional standards.	Duty Free.....	9.60	Duty Paid.....	12.80
24890.	Lovibond Tintometer Set for estimating the value of flour, including the improved optical instrument No. 25806, standard white, 6 trays, pressing apparatus and 90 standard glasses.	Duty Free.....	63.00	Duty Paid.....	84.00
24894.	Lovibond Tintometer Set for estimating the coloring matter in tanning solutions, consisting of binocular instrument in polished box, with stand and reflector, 5 cm and 10 cm glass cells and 88 standard glasses.	Duty Free.....	64.50	Duty Paid.....	86.00

No. 24930

	Each.....	.30	.35	.50	.40	.40
24922.	Alundum Cover for Combustion Boat No. 24918, $4\frac{1}{8}$ inches long x $\frac{5}{16}$ inch wide.....					.75
24926.	Combustion Boats, Johnson, of clay.....					.10
24930.	R R Alundum, for use with combustion boats of either platinum or siliceous materials and particularly recommended for alundum boats, increasing their durability and preventing their destruction during combustions. Consists of pure crystalline Alumina and is supplied in granular form of No. 60, 90 and 120 mesh for use in the determination of carbon in steel. Please specify mesh in ordering. In glass stoppered bottles.					
	Size bottle.....			$\frac{1}{2}$ lb.	1 lb.	2 lbs.
	Each.....			.40	.75	1.50
24934.	Combustion Capsules, Royal Meissen Porcelain, without lip, as used in coal analysis.					
	Diameter, mm.....				40	50
	Depth, mm.....				22	30
	Each.....				.20	.20
24938.	Combustion Tubes, Alundum, to withstand temperatures of approximately 2000° C. These tubes are made gas-tight by glazing without sacrificing their refractive quality; in 24 inch lengths.					
	Inside diameter, inches.....			$\frac{3}{8}$	$\frac{3}{4}$	1
	Each.....			4.95	4.95	4.95
24942.	Combustion Tubes, Sanitäts Porcelain. Glazed inside and outside. In 60 cm lengths.					
	Inside diameter, mm.....		15	18	22	25
	Each.....		1.60	2.00	2.25	2.75
24946.	Combustion Tubes, Royal Berlin Porcelain, glazed inside and outside. Will stand a temperature of 1100° C. and are paractically gas tight. In 60 cm lengths.					
	Inside diameter, mm.....		15	20	28	
	Each.....		4.50	5.40	7.20	
24950.	Combustion Tubes, Marquard Mass, for temperatures up to 1650° C. These are furnished either glazed or unglazed. In 60 cm lengths.					
	Inside diameter, mm.....			15	20	
	Each.....			4.00	4.75	
24954.	Combustion Tubes Opaque Silica, for temperatures up to 1500° C. Tubes of the following diameters are carried in stock in 2 ft. lengths but tubing from $\frac{3}{16}$ in. to 2 in. inside diameter can be furnished in lengths up to 8 ft.; 24 in. long x $\frac{3}{8}$ in. inside diameter is the standard tube for Hoskins Combustion Furnace No. 28988					
	Inside diameter, inches.....			$\frac{3}{8}$	$\frac{7}{8}$	1
	Each, unglazed.....		4.20	4.60	5.00	
	Each, glazed on outside and at one end.....		5.20	5.60	6.00	
24956.	Combustion Tube, Vitrified Clay, Johnson. When used with tapered clay connector below rubber stoppers are unnecessary in carbon combustion work, etc. See <i>Journal of Industrial &amp; Engineering Chemistry</i> , July, 1913.....					3.00
24957.	Tapered Connector, Vitrified Clay, for use with above.....					.90

No. 24958

# COMBUSTION TRAIN, VANIER, for the Determination of Carbon in Steel by the Direct Combustion Method with Electric Furnace, consisting of the following:

- H and H', 4 liter Aspirator Bottles for maintaining a constant pressure, H being filled with water.
- A, Potash Bulb with caustic potash for purifying oxygen before entering tube.
- B, Calcium Chloride Tube, for removing moisture from oxygen before entering tube.
- C, Hoskin Electric Combustion Tube Furnace.
- D, Glazed Quartz Combustion Tube,  $\frac{3}{4}$  inch bore and 2 feet long.
- E, Vanier Zinc Tube for granulated zinc, to remove any trace of sulphur.
- F, Vanier Sulphuric Acid Bulb, for absorbing moisture.
- G, Vanier Combined Potash Bulb and Drying Tube.

The determination of carbon in steel is one of the principal duties of the Steel Chemist and when this analysis is made by the direct combustion method with the proper furnace and absorption train, it becomes one of the most satisfactory analyses, both in point of time and in accuracy to be made in a steel laboratory. This combustion outfit is the design of Mr. Geo. P. Vanier, Chief Chemist of the Pennsylvania Steel Company, several of the important components of the train being specially designed by Mr. Vanier for this apparatus. With this outfit one man can, with five outfits, maintain a rate of ten combustions per hour. An important feature of the outfit is the Vanier Combined Potash Bulb and Drying Tube (Patented) Fig. G of the illustration. It offers many advantages over the bulbs formerly used, i.e.—

- Large capacity. Six grams, or more, of carbonic acid can be absorbed, thus enabling the chemist to make over 100 combustions without refilling.
- No rubber caps are necessary when weighing with the bulb filled with oxygen as the glass stopcock closes the inlet and outlet.
- Having a drying tube attached they are compact and more easily handled than the ordinary bulbs.
- They have a smooth outer surface which is easily cleaned.
- They are self-supporting and, having a firm base, can be conveniently placed on the balance pan when weighing.
- The drying tube being vertical, the moist gases pass in at the bottom and the drying tube never stops up. As the solid caustic potash deliquesces it forms a pool in the bottom of the drying tube thus making an extra seal.
- The gases can be passed at a high rate without loss of CO<sub>2</sub> or moisture.
- When gases are passed through rapidly the action is perfectly quiet without any spraying or jumping of the solution.

- 24958. Vanier Combustion Train, complete outfit as illustrated, consisting of aspirator bottles H and H'; bulbs A, B, E, F and G, Hoskin Electric Combustion Furnace C, glazed quartz combustion tube D, rubber tubing, supports, clamps, glass rods, two Aluminum combustion boats,  $3\frac{1}{4} \times \frac{3}{8}$  inches, and  $\frac{1}{2}$  lb. of R R Aluminum but without oxygen tank. 42.00
- 24962. Vanier Combustion Train, complete as above, but with the addition of Hoskins Rheostat for regulating temperature of furnace. 50.00

24978. **Compression Pump for the Determination of Critical Pressure**, with high pressure manometer mounted on board, with six extra capillaries. See *Phys.-chem. Mess. Seite 228.*  
Duty Free ..... 43.60 Duty Paid ..... 59.40
24982. **Compression Pump, Ramsay-Young**, for gases, consisting of an iron compression cylinder with screw for pressure up to 200 atmospheres, with three tubulations for manometers, three calibrated and graduated manometer tubes of English lead glass, two cooling jackets with thermometers, etc. See *Travers. experimentelle Untersuchung von Gasen pag. 251 Braunschweig 1905.*  
Duty Free ..... 90.75 Duty Paid ..... 123.75

25000.	Condenser, of brass, with condensing tube of glass. With rubber stoppers.							
	Length, mm.....	300	375	500	600	675	750	1000
	Each.....	3.00	3.50	3.80	4.20	4.50	5.00	6.50
25004.	Condenser, Liebig, of glass, with condensing tube in form of coil sealed in water jacket.							
	Length, mm.....	150	200	250	300	400	600	
	Each.....	1.25	1.60	1.80	2.25	3.00	5.00	
25008.	Condenser, Liebig, with rubber connections.							
	Length, mm.....	250	300	400	500	600	800	1000
	Each.....	.85	1.00	1.10	1.25	1.60	2.00	3.00
25012.	Condenser Tubes for above condensers, of glass.							
	Length, mm.....	250	300	400	500	600	800	1000
	Each.....	.18	.20	.22	.25	.35	.45	.65
25016.	Condenser, Liebig, of glass, with inner tube sealed to body.							
	Length, mm.....	250	300	400	500	600	800	1000
	Each.....	.90	1.10	1.25	1.65	2.00		
25020.	Condenser, Allihn, of glass, with bulb condensing tube.							
	Length, mm.....	200	250	300	400	600		
	Each.....	1.10	1.25	1.40	1.60	2.40		
25024.	Condenser, Hopkins, outside jacket 35 cm long. As widely used in Extraction Apparatus. See <i>Journal of the American Chemical Society, December, 1903.</i>							1.75
25028.	Condenser, Hopkins, Picard-Law modification, which consists in the side tube being bent upright at right angles with a funnel top so that extraction fluid may be poured into the condenser without disconnecting the extraction tube when used in connection with extraction apparatus. Widely used in cotton seed oil work.							1.90
25032.	Condenser, Gökkel, may be connected air-tight with receiver and used either as a reflux condenser or for the determination of inflammable substances where dangerous gases must be led off from inside.							
	Length of jacket, inches.....					18	24	
	Each.....					3.00	3.60	
25036.	Condenser, Sulphurous Acid, Liebig, of glass, with two stopcocks on horizontal tubes.							2.25

25040.	Condenser, of glass, with spiral.			
	Capacity, cc.....	500	1000	2000
	Each.....	3.00	3.50	4.25
25044.	Tripod, of metal, for use with condenser No. 25040.			
	For condenser, cc.....	500	1000	2000
	Each.....	1.00	1.50	2.00

No. 25040

25048. Condenser, of zinc, with heavy block tin worm. For use with distilling apparatus such as No. 26548.  
For still of capacity, gallons.....  $\frac{1}{2}$  1 2 3 5  
Each..... 5.00 6.00 8.00 10.00 12.00
25052. Condenser, Friedrichs, of glass, screw shape, with glass screw inside. See *Zeitschrift für angew. Chemie*, 1910..... 3.00
25056. Condenser, Friedrichs, of glass, screw shape, with counter current device. Specially adaptable for use as reflux condenser. See *Zeitschrift für angew. Chemie*, 1912..... 5.00
25060. Condenser, Mohr, of glass, with cork stoppers and tubing as shown in illustration.  
Length, mm..... 300 360 500  
Each..... 1.00 1.25 1.40
25064. Condenser, Soxhlet, spherical, of copper tinned inside, 4 inches in diameter..... 3.00
25068. " same as No. 25064 but with two bulbs..... 6.00
25072. Condenser Support, consisting of Support No. 3766S, with extra large rectangular base, large clamp holder No. 24516 and large universal clamp No. 2450S..... 2.60
25076. Condenser Support, consisting of No. 3766S with extra large rectangular base and brass condenser clamp No. 24506..... 3.00
25080. Condenser Support, for condenser up to 60 mm in diameter, with double clamp of brass, on iron tripod..... 6.00
25084. Condenser Support, for condenser up to 60 mm in diameter, of iron, with double brass clamp..... 6.00

25346. **Crucible Holder, Bailey**, consisting of a rubber holder taking a 25 cc porcelain Gooch crucible. The rubber holder fits an ordinary 2 inch 60° glass funnel as shown in illustration. The lower part of the rubber holder rests against the side of the funnel supporting the crucible while the upper part makes a seal against the top of the funnel when suction is applied. Rubber holder only .30
25348. **Crucible Holder, Spencer**, consisting of a special glass funnel or filter tube, with projecting lug to support crucible and rubber ring for use with Alundum crucible. The suction makes tight contact between the crucible and the inside of the glass funnel. See *Journal of Industrial and Engineering Chemistry*, Vol. 4, No. 8, Sept., 1912. 1.50
25350. **Crucible Holder, Walter**, for Gooch crucibles of 25 cc capacity, consisting of a combined rubber stopper and crucible holder with glass funnel shaped tube set in stopper. Will fit the neck of any regular suction flask up to 1 liter capacity. Price includes the funnel tube and rubber part only .40

25352. **Crucible Holder, Rotary**, for the uniform heating of crucibles in the determination of ash, evaporations with concentrated sulphuric acid, incineration of sugar, glycerine, food products, etc. A uniform heating of the entire contents of the crucible is secured by the rotation of the triangle supporting it. Apparatus is arranged with pulley for convenient connection to water motor or other source of power. Complete with one burner as shown in illustration..... 20.00

No. 25370

## CRUSHING, GRINDING AND PULVERIZING APPARATUS

For Ores, Minerals, Drugs, Food Stuffs and Samples of various kinds, Bacteria, Animal Tissues, Lymph, etc. For convenience we have grouped under the above heading apparatus heretofore listed under Crushers, Grinders, Mills, etc., believing that such an arrangement will facilitate selection.

- |        |   |       |
|--------|---|-------|
| 25354. | Crusher, or Bucking Board, of chilled iron. Board is 18 x 24 inches.....  | 10.00 |
| 25358. | “ “ “ similar to No. 25354 but of hardest Chrome Steel, weighs 115 lbs. Rubber is 7 x 8 inches and weighs 30 lbs. The metal does not grind off into the sample. As used in many large steel laboratories and as recommended by the Chemists' Committee of the U. S. Steel Corporation in their "Uniform Methods".....                                 | 45.00 |
| 25362. | Crusher, Weatherhead Patent, a pulverizing and amalgamating mortar which crushes and pulverizes coarse material at one operation. Will handle any material from clay to pig iron. The cover of the machine is so designed that it may be used as a small hand mortar using the end of the handle as a pestle.....                                     | 25.00 |
| 25366. | Mill, Assay, for pulverizing hard substances, such as ores, etc., for analysis. To bolt to bench or table Will take material about $\frac{3}{4}$ inch in diameter.....  | 10.00 |
| 25368. | Extra plates for above, per set.....  | 2.00  |
| 25370. | Grinding Apparatus with Agate Mortar, for reducing ore to an impalpable powder. It is also used for grinding bacteria and other organic materials. Any desired pressure may be obtained and both mortar and pestle revolve giving a combined rolling and sliding motion. Agate mortar is 110 mm in diameter. Total height of apparatus 18 inches..... | 60.00 |

No. 25374

No. 25386

25374. **Crusher, Case Patent.** When driven by power has a capacity of from 100 to 200 lbs. per hour. Jaw opening is  $2\frac{1}{2} \times 3$  inches. The adjustment for fine or coarse work is made by use of patented shims which are inserted between the front jaw plate and the frame, affording a variation of from  $\frac{1}{4}$  inch to 20 mesh. Weight 135 lbs. For hand power only..... 37.00
25378. **Crusher, Case Patent,** exactly same as No. 25374 but arranged for both hand and power driving 40.00
25382. " " large size, for power driving only. Similar to No. 25378 but with jaw opening  $3 \times 4\frac{1}{2}$  inches, capacity 200 to 300 lbs. per hour, shipping weight 350 lbs. Furnished with both tight and loose pulleys..... 100.00
25386. **Pulverizer or Sample Grinder, Her's Patent Disc.** Will grind an ordinary 8 oz. sample to 100 mesh in less than one minute. Adjustment for degree of fineness can be made while machine is in operation, thus one part of a sample may be ground to 50 mesh, part to 100 mesh and part to 200 mesh while the machine is in motion. Made in two sizes, the small size with 6 inch discs, weighing 130 lbs. and is furnished with 10 inch pulleys and requires  $\frac{1}{2}$  h. p. to operate; the large size has 9 inch discs, weighs 300 lbs., and is furnished with 14 inch pulleys and requires 2 h. p. for operation. With one set of discs.
- |                                     |       |        |
|-------------------------------------|-------|--------|
|                                     | 6     | 9      |
| Each.....                           | 85.00 | 145.00 |
| 25388. Grinding discs, per set..... | 5.00  | 11.00  |

No. 25390

No. 25390

No. 25402

25390. **Sample Grinder, Braun.** for Ordinary Ore, pulverizes to 200 mesh at one grinding. Capacity 4 oz. of ordinary granite rock to 100 mesh in 3 minutes. For hand power only, with one set of discs. 50.00
25392. **Sample Grinder, Braun, for Coal and Coke,** otherwise exactly the same as above..... 50.00
25394. **Sample Grinder, Braun, for Coal and Coke,** with tight and loose pulley for power driving..... 60.00
25396. Grinding Discs, for any of above, per set..... 10.00
25398. **Sample Grinder, Braun, for Iron Ore,** with discs of special carbon steel containing a low percentage of phosphorous. With both tight and loose pulley for power driving..... 85.00
25400. Grinding Discs, of special carbon steel, per set..... 20.00
25402. **Grinder for Iron Ore, Braun, New No. 7,** similar in construction to the Sample Grinders but larger and built for higher speed. Grinding plates are 7 inches in diameter and are of carbon steel with low phosphorous content. Will grind  $\frac{1}{4}$  inch material to 200 mesh. With balance wheel and tight and loose pulley for power only..... 125.00
24504. Grinding Discs of special carbon steel, 7 inches diam., per set..... 22.50
24505. Grinding Discs for coal and coke for above, per set..... 10.00

No. 25438

No. 25439

No. 25450

25434. **Crusher, Improved Chipmunk No. 1**, with improved adjusting device consisting of an eccentric bolt passing through the adjusting block. By moving the lever at the side of the machine backward it decreases the opening between the jaws; by moving it forward or towards the operator, it increases this opening. A safety pin is placed in one of the holes which prevents the stationary jaw being brought in contact with the movable jaw. The main feature of this machine is the fact that the frame is made of steel, each side being made in one piece, and both rigidly secured together with strong bolts. The second important feature is the ease with which all of the interior parts are reached for cleaning. The front or stationary jaw can be removed from the crushing chamber in a moment's time, while the rear jaw can be swung backward, thus exposing every part of the machine for cleaning. The vibratory jaw is mounted upon an eccentric shaft at its upper end, and rests against a toggle at its lower end. The eccentric imparts a circular or gyratory movement to the upper end, while the toggle compels the lower end to describe an arc of a small circle. This motion is both forward and downward, or a rubbing motion, and impels a discharge. With jaws 3 x 6 inches, opening  $1\frac{1}{4}$  inches, capacity 300 to 400 lbs. per hour to  $\frac{1}{2}$  mesh and smaller, for both hand and power driving. . . . . 45.00
25438. **Crusher, No. 1a**, as above, but for power driving only, with tight and loose pulleys. . . . . 55.00
25442. **Crusher, No. 3**, " " larger size with jaws 4 x 9 inches, opening  $2\frac{3}{4}$  inches, capacity 1000 to 1500 lbs. per hour to  $\frac{1}{2}$  mesh and smaller, for both hand and power driving. . . . . 110.00
25446. **Crusher, No. 3a**, large size as above but for power driving only, with tight and loose pulleys. . . . . 125.00
25450. **Milling Machine, Laboratory, Johnson**, for taking samples of thin sheets, wire, resistance ribbon nails, steel blades and small samples of all kinds that are irregular in shape for use in carbon determinations in iron and steel analysis. . . . . 28.00

No. 25451

No. 25458

No. 25462

No. 25466

25451. **Mill, Seck**, for coarse grist, a widely used laboratory mill, particularly adaptable for grinding malt to a definite degree of fineness, which is adjustable by a special regulating device. This mill has been adopted by the International Congress of Chemists in Berlin and the Royal German Brewing Academy. For hand driving. . . . . 100.00
25458. **Mill, Seck**, as above, for power driving. . . . . 105.00
25462. **Mill, Grinding and Pulverizing**. Will granulate or grind to fine powder. Pulley 10 inches in diameter by  $1\frac{1}{4}$  inches wide. Is used with great satisfaction in tanning laboratories for grinding leather samples and in cotton seed oil and other laboratories. . . . . 25.00
25466. **Mill, Porcelain**, for grinding either wet or dry substances, for both bacteriological and chemical purposes, with grinding parts of acid-proof porcelain. With grinding surface of 170 mm in diameter, for hand power. . . . . 25.00

No. 25470

No. 25474

No. 25478

25470. Mill, **Excelsior**, for drugs, food stuffs, seeds and a great variety of other work in grinding laboratory samples. Widely used in Agricultural Experiment Stations. Diameter of grinding discs 6½ inches. Output per hour 25 to 50 lbs.
25474. Mill, **Swift B.** Easily adjusted to any degree of fine grinding. Can be opened, cleaned and closed quickly and without changing the degree of fineness as adjusted. Hopper capacity 3 lbs., total height 30 inches, diameter of fly-wheel 34 inches.
25478. Mill, **Drug**, for grinding drugs, grains, seeds, etc. Can be regulated to grind to various degrees of fineness.
- |                                 |      |      |      |

| Each.....                       | 4.25 | 6.00 | 9.00 |

No. 25482

25482. Mill, **Laboratory Drug, Körner**, a new model particularly adapted for the grinding of vegetable substances and the preparation of drugs, feed stuffs, etc.; as supplied by us to the leading pharmaceutical manufacturers in the U. S., and as used in the U. S. Department of Agriculture, etc. See *Chemiker-Zeitung*, 1903 27, No. 42. For hand driving, with improved ball bearings.
25486. Mill as above, but for power driving, with improved ball bearings.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 115.50 | Duty Paid..... | 140.00 |
| Duty Free..... | 82.50  | Duty Paid..... | 100.00 |

No. 25490

No. 25494

25490. Ball Mill, consisting of a porcelain jar with pebbles. Will handle specimens from  $\frac{1}{2}$  oz. to  $1\frac{1}{2}$  lbs. at one time. Pulley is 9 inches in diameter x 1 inch wide and requires 80 to 100 r. p. m. for fine grinding. Outside dimensions of jar 5.2 x 5.7 inches. Price complete with pebbles..... 15.00
25494. Ball Mill, consisting of a porcelain jar and pebbles. Jar is 8.7 x 9.6 inches. Will handle quantities from a few ounces up to 5 lbs. Wheel pulley 9 inches in diameter, with handle. Requires 60 r. p. m. Complete with pebbles..... 30.00
25498. Extra Jars, for No. 25494, each..... 12.00
25502. Porcelain Pebbles, per lb..... .30

No. 25506

No. 25518

25506. Grinding Apparatus for Bacteria, etc., White, and as used in the laboratories of the Pennsylvania State Live Stock Sanitary Board. Glass globes may be sterilized with the agate marbles inside. Complete with two glass globes and set of agate marbles..... 35.00
25510. Extra Glass Globes, each..... 5.00
25514. Marbles, per box of 25..... 5.00
25518. Ball Mill, Porcelain, small model on baseboard, with water turbine and including 2 kilos of hard porcelain balls..... 26.40
- Duty Paid..... 32.00

No. 25522 (See description on following page.)

- 25522. Grinding Machine for Bacteria etc.**, consisting of from three to five horizontally operated porcelain mills. As furnished by us to the laboratories of Henry Phipps Institute, Philadelphia, Pennsylvania State Live Stock Board, etc. Complete with motor for 110 or 220 volts direct current.
- |                      |        |        |        |        |

No. 25530

No. 25534

No. 25538

- 25530. Grinding Apparatus, Macfaedyn, for Bacteria and Frozen Organisms.** The construction of this apparatus is based upon the fact that the organisms pulverize better when frozen by liquid air to the hardness of glass. The mortar is operated in a liquid air vessel. Complete with motor. Current and voltage must be specified in ordering.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 591.70 | Duty Paid..... | 717.20 |
|----------------|--------|----------------|--------|
- 25534. Grinding Apparatus for Organs, Tumors, etc.**, by means of pressure applied during the cutting. Model of the Hygienic Institute, Berlin. The substances can be finely enough ground as to be injected directly.
- |                      |       |       |
|----------------------|-------|-------|
| Capacity, grams..... | 10    | 50    |
| Duty Free.....       | 24.75 | 49.50 |
| Duty Paid.....       | 30.00 | 60.00 |
- 25538. Grinding Machine for Bacteria, etc., Koch, as supplied by us to the laboratories of the Henry Phipps Institute, Philadelphia.** With motor. Current and voltage must be specified in ordering.
- |                |        |                |        |

No. 25542

No. 25558

No. 25570

- 25542. Grinding Machine for the Preparation of Animal Lymph.** Devised for the thorough mixing of the animal lymph with the necessary glycerine. The lymph is poured into the conical shaped funnel and is carried by means of the revolving spindle through the cylinder. The spindle is of pure nickel screwed with a thread, gradually tapering from a rough thread at top to a very fine thread at bottom. The inside of the cylinder is also of pure nickel. The mixing spindle is run on a compound ballbearing and is so arranged that it can easily be removed for sterilizing and replaced without any difficulty. In order that the bore of the cylinder may be easily cleaned and examined the cylinder is cut into two halves and held together when in use by the clamps shown. The machine is mounted on a strong table with marble top and the working part is encased under a glass cover with hinged door. The cover need not be removed when the machine is at work. By means of this machine the lymph is thoroughly mixed in about 15 minutes without any loss of the lymph which is kept perfectly free from dust. As supplied by us to some of the leading manufacturers of biological products in the U. S. Complete as illustrated, for foot power, with treadle and driving wheel.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 142.00 | Duty Paid..... | 172.00 |
|----------------|--------|----------------|--------|
- 25546. Grinding Machine,** exactly same as No. 25542 but fitted with pulley for power driving.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 122.10 | Duty Paid..... | 148.00 |
|----------------|--------|----------------|--------|
- 25550. Grinding Machine,** exactly same as No. 25542 but with electric motor for direct current and adjustable resistance coils for starting. Voltage must be stated in ordering.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 204.60 | Duty Paid..... | 248.00 |
|----------------|--------|----------------|--------|
- 25554. Grinding Machine,** exactly same as No. 25542 but with electric motor for alternating current and with countershaft. Voltage must be stated in ordering.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 224.50 | Duty Paid..... | 272.00 |
|----------------|--------|----------------|--------|
- 25558. Grinding Mill for Lymph.** Model of the K. K. Impfstoff-Gewinnungs-Anstalt, Vienna; consisting entirely of glass, permitting the whole utensil to be repeatedly sterilized. The complete outfit is mounted on an enamelled iron bracket with marble top, and water motor for driving built in.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 115.20 | Duty Paid..... | 158.40 |
|----------------|--------|----------------|--------|
- 25562. Grinding Mill for Lymph** as above, but with electric motor drive. In ordering please state current.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 204.00 | Duty Paid..... | 280.50 |
|----------------|--------|----------------|--------|
- 25566. Filling Apparatus for Lymph.** Model of the K. K. Impfstoff-Gewinnungs-Anstalt, Vienna; improved construction, with complete equipment for the adjustment of pressure and blast lamp for melting the capillary tubing, on enamelled iron table, with electric motor.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 228.00 | Duty Paid..... | 313.50 |
|----------------|--------|----------------|--------|
- 25570. Combined Lymph Grinding and Filling Apparatus,** consisting of outfit No. 25562 for grinding, and outfit No. 25566 for filling. Complete, on enamelled iron table.
- |                |        |                |        |
|----------------|--------|----------------|--------|
| Duty Free..... | 468.00 | Duty Paid..... | 643.50 |
|----------------|--------|----------------|--------|

No. 25574

No. 25578

No. 25586

- 25574. Grinding Apparatus, Borrel, for Organic Tissues, Bacteria, Lymph, etc.** The grinding is accomplished by means of flexible steel leaves. The normal speed is about 2000 r. p. m. and the front (shown removed in illustration) is of glass so that the entire process may be observed. All the working parts may be readily sterilized and the machine is well suited for the grinding of moist as well as dry material.  
 Duty Free..... 87.50      Duty Paid..... 105.00
- 25578. Cryoscope, Friedenthal, for Molecular Weight Determination** by depression of the freezing point in physiological and clinical work. See *Zentralblatt für Physiologie 1899-1900*. Outfit consists of the following:—  
**Cooling Jar**, with wooden cover nickel stirrer, one freezing tube with rubber stopper and one freezing rod.  
**Thermometer**, for the cooling mixture, from  $-20$  to  $+49^{\circ}$  C. in single degrees.  
**Stirrer**, for the solution, consisting of glass rod with platinum ring. Approximately 1.2 grams of platinum.  
**Thermometer, Heidenhain**, from  $+0.5^{\circ}$  to  $-25^{\circ}$  C. in  $\frac{1}{10}$ ths. As in medical work only a few degrees under zero are required in the thermometer, this thermometer is furnished with fixed graduations so that the laborious adjustment of zero in the regular Beckmann thermometers is avoided. When small drops of mercury are found in the enlargement at the top of the tube they must be carefully run into the tube by inversion of the thermometer.  
 Complete outfit as described.  
 Duty Free..... 10.75      Stock..... 16.25
- 25582. Thermometer, Heidenhain**, as described above..... 9.00
- 25586. Cryoscope, Drucker-Burrian, for Molecular Weight Determination** by depression of the freezing point in physiological and clinical work, designed for small quantities, only 1.5 cc of solution being necessary. See *Zentralblatt für Physiologie, Band XXIII, Nr. 22*. Outfit consists of the following:  
**Cooling Jar**, with nickel plated cover and stirrer.  
**Freezing Tube**, with cork ring and air jacket with cork for both thermometer and stirrer.  
**Stirrer**, of glass with platinum ring, approximately 1.2 grams of platinum.  
**Thermometer**, with fixed degrees as in Heidenhain No. 25582, from  $+0.5^{\circ}$  to  $-5^{\circ}$  C. in  $\frac{1}{10}$ ths, total length 24 cm, with specially small bulb designed especially for this apparatus.  
 Complete outfit as described.  
 Duty Free..... 10.05      Stock..... 15.25
- 25590. Thermometer only**, as described above..... 9.00

- 25602. Culture Dishes, Petri, of glass, fitted in pairs.** The 100 x 10 mm size is the standard Petri dish for bacteriological work throughout the U. S. The glass is very free from striae and will stand repeated sterilization with a minimum of breakage and corrosion.
- |               |     |     |     |
|---------------|-----|-----|-----|
| Diameter, mm. | 100 | 120 | 150 |
| Depth, mm.    | 10  | 10  | 10  |
| Per pair.     | .20 | .40 | .60 |
- 25606. Covers, Porous Earthenware, for culture dishes 100 mm in diameter. Each.** ..... .15
- 25610. Culture Dishes, of glass, fitted in pairs, with top and bottom surface as free from striae as possible, for cultures, mounting of specimens in gelatine, etc.**
- |               |     |     |     |     |     |     |     |     |     |      |

| Diameter, mm. | 40  | 50  | 60  | 80  | 100 | 120 | 150 | 200 | 220 | 240  |
| Depth, mm.    | 10  | 10  | 10  | 10  | 15  | 20  | 20  | 35  | 40  | 50   |
| Per pair.     | .15 | .15 | .18 | .21 | .30 | .40 | .60 | .80 | .90 | 1.30 |
- 25614. Culture Dish, of glass, with top and bottom polished, permitting the examination of cultures with higher power objectives than the ordinary blown Petri dish. So-called Pasteur dish. Fitted in pairs.**
- |               |     |     |
|---------------|-----|-----|
| Diameter, mm. | 100 | 100 |
| Depth, mm.    | 5   | 10  |
| Per pair.     | .50 | .50 |
- 25618. Culture Dish, of glass, fitted in pairs, with top and bottom of polished plate glass. Glass rings forming sides are cemented on at 600° C. in a special furnace. Especially valuable for photomicrographic work and use with microscope because of the freedom from distortion as compared with blown dishes. Will stand sterilization as well as the ordinary Petri dish. Per pair.** ..... 1.25
- 25622. Culture Dish, White Metal, Friedberger-Kanten, rectangular form, 250 mm wide by 10 mm deep. 3.00**
- 25626. Culture Dishes, Gabritschewsky, as originally used for Tetanus cultures but as now used for growing tissues in plasma. The culture is made on the under side of the lid. The circular concave portion of the dish serves to collect the products of metabolism falling from the culture, the circular trough around the bottom dish being used for water. By means of the apertures provided a slight turn of the lid permits or excludes the entrance of air into the culture compartment. Per pair.** ..... .75
- 25630. Culture Dish, Porcelain, Neisser. Dishes are 100 mm in diameter x 10 mm deep and are furnished in both black and white glazed porcelain.**
- |        |       |       |
|--------|-------|-------|
| Color. | White | Black |
| Each.  | .60   | .75   |
- 25634. Culture Dishes or Moist Chambers, large double dishes of heavy glass, with loosely fitting covers with knob.**
- |                        |      |      |
|------------------------|------|------|
| Inside height, mm.     | 70   | 80   |
| Diameter of cover, mm. | 200  | 240  |
| Each.                  | 1.25 | 2.00 |
- 25638. Culture Dishes or Moist Chambers, same as No. 25634 but without knob on cover.**
- |                        |      |      |
|------------------------|------|------|

25642.	Culture Dish Holder, Ravenel, for dishes 100 mm diameter, of spring brass, nickel-plated. A very convenient device for handling dishes in the incubator and sterilizer. To hold, dishes.....	3	6
	Each.....	.50	.75
25646.	Culture Dish Holder, of polished copper, with removable inside tray. To take 100 mm dishes. Height 9 inches.....		3.00
25650.	Culture Dish Holder, of sheet copper, nickel plated, with door and handle. For dishes 100 mm in diameter. Height 8 inches.....		6.00
25654.	Culture Dish Holder, rectangular form, of nickel plated copper. For dishes 100 mm in diameter.....		6.00
25653.	Culture Flasks, Koch. Capacity, cc.....	50	100
	Each.....	.12	.15
25662.	Culture Flask, Fernbach, so-called Antitoxin flask. Shape as used in the Antitoxin Laboratories of the Philadelphia Board of Health, 8 inches high and 10 inches in diameter at base.....		2.00
25666.	Culture Flask, Freudreich, with ear ground on, 25 cc capacity.....		.35
25670.	" " " " with side neck, capacity 25 cc.....		.40
25671.	" " " " Lister, for serum capacity 500 cc.....		.60
25678.	" " " " Miquel, with flat bottom and ground on cap. Capacity, cc....	50	75
	Each.....	.35	.40
			.45

25682.	Culture Flask, Kollé, with indentation to prevent flowing out of medium. Flasks are about 3 cm deep. As used in the preparation of typhoid vaccine in the U. S. Army Medical Department. Diameter, cm.....	13	
	Each.....	.50	.60
25690.	Culture Flask, Roux, 220 mm long, 120 mm wide and 53 mm deep.....		.80
25694.	" " " " Pierkowski, 140 mm long, 140 mm wide and 50 mm high.....		.80

25696.	Culture Flask, Martin, for toxin.				
	Capacity, cc.....	125	250	500	1000
	Each.....	.35	.50	.75	1.00
25698.	Culture Flasks, Chamberland.				
	Capacity, cc.....	125	250	500	1000
	Each.....	.40	.50	.60	.80
25702.	Culture Flasks, Miquel, pipette form.				
25706.	Culture Flask, Pasteur, with side tubulations and constricted neck.				
	Capacity, cc.....	100	250	500	1000
	Each.....	.40	.50	.60	.80
25710.	Culture Flask, Pasteur, Jena Glass. Same shape as above. Recommended because of insolubility of glass during sterilization. Capacity 500 cc.....				1.30
25714.	Culture Tube, Gayon, 220 mm long by 20 mm diameter.....				.30
25718.	" " Roux, for potato cultures, 155 mm long by 20 mm diameter.....				.10

25722.	Cups or Cells, porous, of unglazed porcelain, for use in batteries, etc.								
	Height, mm.....	75	75	95	110	135	185	200	
	Diameter, mm.....	38	50	50	50	65	80	80	
	Each.....	.10	.15	.18	.20	.30	.40	.55	
25726.	Cupels, Brownite, for assaying, are absolutely uniform in composition and density, give a lower silver loss than bone ash, and are guaranteed against breakage in shipment. They should be hot before receiving the button.								
	Diameter, inches.....		1	1 1/4	1 1/2	1 3/4	2		
	Height, inches.....			1 1/4	1 1/2	1 3/4	2	2 1/2	
	Per 100.....		1.00	1.25	1.75	2.00	2.50		
25730.	Cupels, Torry & Eaton, of best washed bone ash.								
	Diameter, inches.....	1	1 1/8	1 1/4	1 3/8	1 1/2	1 5/8	1 3/4	2

	Each.	.75	.80	1.00	1.75	3.25	4.00			
25774.	Cylinders, Graduated, with double graduations, and spout, on foot.									
	Capacity, cc.	5	10	25	50	100	200	250	500	1000
	Each.	.28	.30	.40	.50	.65	.80	1.00	1.20	2.00
25778.	Cylinders, Graduated, with single graduations and ground glass stopper. So called “mixing bottle.”									
	Capacity, cc.	10	25	50	100	150	200	250	500	1000
	Each.	.50	.55	.60	.80	.90	1.00	1.15	1.35	2.30
25782.	Cylinders, Graduated, same as No. 25778. but with double graduations.									
	Capacity, cc.	10	25	50	100	250	500	1000	2000	
	Each.	.50	.60	.70	.80	1.20	.65	2.45	4.50	
25784.	Cylinders, Graduated, New Jena Glass, with single graduations.									
	Capacity, cc.	50	100	200	250	500	1000			
	Each.	.90	1.10	1.35	1.50	2.00	3.00			
25786.	Cylinder, Graduated, for use with the official Brown-Duvel Moisture Tester. With enlarged top, reading in percentages up to 16%. See Bulletin 56 of the U. S. Bureau of Plant Industry.									.40
25788.	Cylinder with Outlet but without spout, of well-annealed thin glass guaranteed to stand repeated sterilization; 4 inches in diameter and 15 inches high, with tubulation at the side; as used in the laboratory of Soil Bacteriology of the U. S. Department of Agriculture.									1.25
25790.	Cylinder, as used in testing sewage, with conical end graduated from 0 to 50 cc, total capacity 1000 cc.									2.50
25792.	Cylinder, as above, of conical shape throughout, with graduations at points from 0 to 100 cc, total capacity, 1000 cc.									2.25

25796. Cylinders, Mixing, Precision, as used in the Hygienic Laboratory, of the U. S. Public Health Service for determining the immunity unit in the standardization of diphtheria antitoxin. See *Hygienic Laboratory Bulletin No. 21*. These cylinders are standardized at 20° C. in accordance with the requirements of the Bureau of Standards but are regularly furnished without certificate. With ground glass stopper without constriction in neck and with flask shaped enlargement below first graduation. Each cylinder of the series has a graduation of 10 cc in  $\frac{1}{10}$ ths, i.e. the capacity to the beginning of the graduations is 10 cc and to the top of the graduations 20 cc and so on up to 100 cc.

Graduations, cc.	5-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90	90-100
Each.....	1.25	1.50	1.55	1.60	1.65	1.70	1.75	1.80	1.85	1.90

**CYLINDERS, Precision, graduated by weighing at 20° C. in accordance with the specifications of the Physikalisch-Technische Reichsanstalt, i. e., with individual control number, time of outflow, all around graduations for the whole centimeters and semi-circular graduations for the fractions, etc.** These cylinders are offered with our unofficial factory certificate and with the Physikalisch-Technische Reichsanstalt certificate and control stamp i. e., the official certificate of the German government. Because of the limited demand we do not carry these cylinders in stock with the official P. T. R. certificate but import them on special order. We do, however, carry them in stock with our unofficial factory certificate. These certificates are made out in the factory in exact accordance with the methods prescribed by the P. T. R. and no Cylinder is certified unless the error falls within the limit permitted by the P. T. R. The data on these certificates may be used as a check where cylinders are calibrated in the laboratory or with entire reliance upon the accuracy of the figures given.

25800. Cylinders, Graduated, Precision, with single graduations and spout, adjusted for receiving, with unofficial factory certificate..

Capacity, cc.....	10	25	50	100	250	500	1000
Graduated in cc.....	$\frac{1}{10}$	$\frac{1}{5}$	$\frac{1}{5}$	1	5	5	10
Each.....	.85	1.30	1.55	1.35	1.90	2.35	3.05

25804. Cylinders, Graduated, Precision, same as No. 25800. but with double graduations; with unofficial factory certificate.

Capacity, cc.....	10	25	50	100	250	500	1000
Graduated in cc.....	$\frac{1}{10}$	$\frac{1}{5}$	$\frac{1}{5}$	1	5	5	10
Each.....	1.25	1.60	1.90	1.50	2.25	2.70	3.50

25812. Cylinders, Graduated, Precision, with single graduations and ground glass stopper, adjusted for receiving. So-called "mixing bottle," with unofficial factory certificate.

Capacity, cc.....	10	25	50	100	250	500	1000
Graduate in cc.....	$\frac{1}{10}$	$\frac{1}{5}$	$\frac{1}{5}$	1	5	5	10
Each.....	1.20	1.65	1.90	1.70	2.35	2.80	4.00

25816. Deflagration Spoons, of brass for burning phosphorous, sulphur, etc., in oxygen.

Diameter of bowl, inches.....	$\frac{1}{2}$	1
Each.....	.15	.20

25820. Deflagration Spoons, same as above but of iron.

Diameter of bowl, inches.....	$\frac{1}{2}$	1
Each.....	.10	.15

25822. Deflagration Spoon, for decomposition of water by sodium; with brass gauze bowl and wooden handle .50

25826.	Demijohns, of glass, with rattan cover. Capacity, gallons.....	1	2	3	5
	Each.....	.50	.75	1.00	1.50
25830.	Desiccator, Scheibler, extra fine quality, with wide, finely ground flange to which covers are evenly and accurately fitted.				
	Diameter, mm.....	100	120	150	200
	Each.....	1.00	1.25	1.50	2.50
25834.	Desiccator, Scheibler, exactly like No. 25830, 150 mm diameter, but with side tubulation to take rubber stopper.....				2.25
25838.	Desiccator, Scheibler, exactly like No. 25834, but with a stout stopcock ground in side tubulation.				
	Diameter, mm.....	120	150	200	250
	Each.....	2.80	3.50	5.50	6.50
25842.	Desiccator, Scheibler, identical with No. 25830, but with ground in glass stopcock and hook in lid.				
	Diameter, 150 mm.....				3.50
25846.	" Scheibler, ordinary quality. Recommended as a very satisfactory desiccator at an unusually low price. Shape same as No. 25830.				
	Diameter, inches.....		4	5	6
	Each.....		.60	.90	1.25
25850.	Desiccator, Hempel, with glass stopcock and hook for suspension. Diameter 150 mm.....				5.00
25854.	Porcelain Plates, glazed, especially intended for use in Scheibler desiccators. On three small feet and with from three to eight holes depending upon the diameter of the plate.				
	Diameter, mm.....	95	115	140	190
	Each.....	.75	.85	1.25	2.00
25858.	Desiccator, Atwater, with triangle inside, diameter about 4½ inches.....				2.00
25862.	Desiccator, Mitscherlich, with glass tripod for taking beakers and deep vessels, 150 mm deep, and 100 mm in diameter, with tubulation and ground in stopcock.....				3.00
25866.	Extra glass tripod for above.....				.25
25870.	Desiccator, Fresenius. Diameter, mm.....			80	100
	Each.....			1.00	1.20
25874.	Desiccator, Fruhling and Schultz, with glazed porcelain plate profusely perforated with small holes.				
	Diameter, mm.....			200	250
	Each.....			7.00	10.00
25878.	Desiccator, Fruhling and Schultz, same as above but with stopcock in lid.				
	Diameter, mm.....			200	250
	Each.....			9.15	13.00
25882.	Porcelain Plates, only, for Fruhling & Schultz Desiccators, glazed and profusely perforated with small holes.				
	Diameter, mm.....			190	230
	Each.....			1.75	2.10
25886.	Porcelain Plates, only, for Fruhling and Schultz Desiccators, with holes 26 mm in diameter for taking crucibles.				
	Diameter, mm.....			190	230
	Each.....			1.75	2.10

25890.	Desiccator, stoutly made to withstand considerable pressure. With glass stopcock, rubber stopper and hook in lid. Diameter, 140 mm.	5.25	
25894.	Stopcock, only, for No. 25890 desiccator.	1.00	
25898.	Desiccator, rectangular form, a new, very practical model.		
	Length, mm.	145	185
	Width, mm.	110	140
	Height, mm.	90	90
	Each.	5.50	7.50
25902.	Desiccator, exactly same as No. 25898 but with stopcock ground in side tubulation, but without porcelain plate as shown in illustration.		
	Length, mm.	145	185
	Each.	9.50	11.50
25906.	Porcelain Plates, rectangular, glazed for use in either of above desiccators and as shown in illustration of No. 25902.		
	Length, mm.	125	170
	Width, mm.	90	125
	Each.	1.80	3.35
Note.—Desiccators No. 25898 and 25902 can be furnished in amber glass on special order.			
25910.	Desiccator, with Electric Hot Plate and Electric Fan. The electric motor and fan are mounted on a nickel desiccator plate and motor may be operated by a three-volt battery. The air circulation from the fan causes much more rapid drying. The tubulation is provided with glass stopcock in addition to electrical connections so that the desiccator may be used for drying in vacuum and with the electric hot plate in place on the nickel support becomes a small vacuum drying oven. The electric hot plate is regularly furnished for connection with 110 volts d. c.; 180 mm in diameter. Complete with nickel support, fan, motor, electric hot plate for 110 volts and support, but without battery.	18.00	30.00
25914.	Dialyzers, consisting of an open top bell glass suspended in a glass jar. The large end of the bell glass is covered with parchment.		
	Capacity, liters.	2	4
	Each.	1.25	1.50
25918.	Dialyzers, Graham. The inner glass to which parchment paper is fastened is supported by its rim upon the edge of the outer vessel.		
	Diameter, mm.	100	150
	Each.	1.30	2.25
25922.	Dialyzer Tubing, of heavy parchment.		
	Diameter, mm.	45	55
	Per meter.	.08	.10
25926.	Diamond, for writing on glass. A fine diamond mounted in a metal handle with removable cap.		2.50
25930.	Diffusion Shells, Schleicher & Schüll No. 579. These shells offer a large dialyzing surface with the smallest possible volume and enable work to be carried on with a small outside vessel. Not suitable for Abderhalden technique.		
	Size, mm.	100 x 16	100 x 35-40
	Per box of 25.	3.15	7.35

SCALPELS, DISSECTING, are carried in the following grades:—

Quality A instruments are of the best attainable quality, being made by the same makers and of the same material as the highest grade minor operating knives.

Quality B instruments are of usual quality for general laboratory work.

Quality C instruments are entirely suitable for students work where instruments are used for one course in dissecting only but are not recommended for permanent use where they are to be repeatedly resharpened.

26336.	Scalpels, Dissecting, quality A, in ebony handle. Special shapes.						
	Style.	A	B	C	D	E	F
	Length of cutting edge, mm.	35	35	35	10	50	23
	Each.	1.25	1.25	1.25	1.25	1.25	1.25
26340.	Scalpels, Dissecting, quality A, in ebony handle. Regular shapes.						
	Length of cutting edge, mm.	18	25	32	38	45	50
	Each.	1.00	1.00	1.00	1.00	1.00	1.00

26344.	Scalpels, Dissecting, quality A, all steel. Easily cleaned and sterilized. Regular shapes.						
	Length of cutting edge, mm.....	25	32	38	45		
	Each.....	1.00	1.00	1.00	1.00		
26348.	Scalpels, Dissecting, quality B, with ebony handle. Special shapes.						
	Style.....	A	B	C	D	E	F
	Length of cutting edge, mm.....	35	35	35	10	50	23
	Each.....	.40	.40	.40	.40	.40	.40
26352.	Scalpels, Dissecting, quality B, with ebony handle. Regular shapes.						
	Length of cutting edge, mm.....	18	25	32	38	45	50
	Each.....	.40	.40	.40	.40	.40	.40
26356.	Scalpels, Dissecting, quality B, all steel. Regular shapes.						
	Length of cutting edge, mm.....	25	32	38	45		
	Each.....	.45	.45	.45	.45		
26360.	Scalpels, Dissecting, quality C, with ebony handles. Regular shapes.						
	Length of cutting edge, mm.....	25	32	38	45		
	Each.....	.25	.25	.25	.25		

26364.	Scissors, Dissecting, with fine points and screw joint, length 150 mm; regular quality.			
	Style.....	Straight	Curved on edge	Curved on flat
	Each.....	.50	.75	.75
26368.	Scissors, Dissecting, with fine points and aseptic lock joint, length 150 mm. Finest grade of surgical scissors.			
	Style.....	Straight	Curved on edge	Curved on flat
	Each.....	.90	1.00	1.00
26372.	Scissors, Dissecting, medium weight, with straight points, 150 mm long. A low priced scissors for student work.....			.25
26376.	Scissors, Dissecting, same size and style as above, but better quality.....			.40
26380.	Scissors, Dissecting, medium weight, with screw joint, 115 mm long.			
	Style.....	With sharp points	With one blunt point	
	Each.....	.60	.60	
26384.	Scissors, Dissecting, medium weight, with one sharp and one blunt point and aseptic lock joint. Finest grade of surgical scissors.			
	Length, mm.....	105	115	125

# STOKES AUTOMATIC WATER STILLS

Diagram showing sectional view of the interior of the still and connections

These Stills are of the bracket type, as this arrangement offers the greatest economy of space and is more sanitary than mounting them on floor stands.

The cost of producing distilled water with the steam apparatus under ordinary conditions is one-fifth to one-quarter of a cent a gallon; this includes the cost of both the steam and water required. The quantity of raw water required to produce each gallon of distilled water depends on the temperature at which the distilled water is delivered by the Still. Under average conditions it requires about eleven gallons of raw water to produce one gallon of distilled.

As these Stills are self-contained and require only the two connections for water and steam, they can be installed at very small expense. They are shipped set up ready for connecting the steam and water.

The capacity of the steam Stills is based on having live steam of 20 to 40 pounds pressure at the Still

By a patented construction the Stokes Automatic Still accomplishes two novel results. First—It utilizes the heat generated in the Still for preheating the incoming raw water to the boiling point. By this arrangement a very small quantity of live steam is required to operate the Still after it is once started. Secondly—By preheating the feed water before it enters the distilling chamber, ammonia and other gases, due to impurities in the raw water, are largely liberated and escape into the atmosphere through an opening in the condenser provided for this purpose. This is a very important feature, for by driving off these gases before the water enters the distilling chamber it prevents their reabsorption by the distilled water.

The Stokes Automatic Stills are made in five sizes; the smallest, No. 0 and No. 00 are heated by gas, gasoline burner or steam coil, and the other sizes, Nos. 1 to 4 are heated with live steam. The principle upon which they operate is as follows: The feed or raw water enters at (H) surrounds the condenser tubes (C) and serves first to condense the steam generated in the Still (B) as it descends the condenser tubes, converting it into distilled water; in so doing the raw water becomes heated to the boiling point by the time it reaches the top of the condenser where the ammonia and other gases escape into the air through the opening (F). A part of this feed water escapes over the goose-neck (E), either into a waste pipe or cistern, and the balance passes into the Still through the passage (M).

By referring to the illustration, it will be seen there is a zone of water at the top of the condenser, which being above the outlet for the overflow (G), is not drawn off except to replenish the water in the Still as it evaporates. This zone of water at the top of the condenser is constantly kept boiling by the steam from the Still descending the condenser tubes, and it is here the ammonia and other gases are liberated. The Still is heated by live steam with a pressure of twenty pounds or over, which circulates in the copper coil (D), and serves to boil or evaporate the raw water. The distilled water comes out at (J) and can be piped to any receptacle. The condenser tubes extend to the extreme top of the steam chamber and high above the water level, so there is no danger of water being carried over by steam. The Still can be flushed for cleaning by opening a valve connecting with the drain, or by removing the copper lid on top, the interior can be easily scrubbed.

The heating coil is made of copper and will stand a steam pressure of 250 pounds. It is so arranged that it can be detached from the Still for cleaning. This is a very important feature, for scale will form rapidly on any heating surface where hard water is being distilled and unless the Still is constructed so this scale can be removed quickly the Still soon loses efficiency and ceases to operate properly.

The condenser cylinder and distilling chamber are cast iron, the latter galvanized to resist corrosion. The condenser tubes are brass, lined both inside and out with block tin. These are held with screw ferrules so the tubes can be removed if occasion should demand. The manhole cover on the top is copper, tin lined.

No. 0 Still  
Capacity  $\frac{1}{2}$  gallon per hour

No. 2 Still  
Capacity 10 gallons per hour

We guarantee these Stills to have the capacities stated above and to deliver pure water, free from any contamination. We will ship them on 30 days' approval to any one in the United States where satisfactory reference is furnished.

We supply copper tin-lined or glass-lined steel tanks for storing the distilled water in any capacity up to 1000 gallons.

No. 26648—For two trays

**26648. Drying Apparatus, Hearson,** for serums and other sensitive and easily decomposed liquids. This apparatus works without vacuum and renders possible the rapid, safe and antiseptic drying of the most delicate liquids at a low temperature. Two liters of serum can be dried in from six to eight hours which, with a large vacuum apparatus as formerly used, required at least 24 hours. The intake of air is filtered through a flannel filter and, after passing through the heating chamber, reaches the drying compartment in which are placed the trays containing the liquid to be dried. The warm air, after having become charged with moisture from the contents of the trays, passes out of the apparatus. Baffle plates insure the direct passage of the current of air over the trays. For most work a temperature of 25 to 30° C. is maintained in the warming chamber, temperature of which may be noted by reading the thermometer. The apparatus is provided for either gas or electric heating as may be specified but for most work we recommend that electric heating be used both for heating the chamber and operating the motor by means of a resistance on the same circuit which makes it impossible for the heating or the motor to operate alone. The following experiment shows the antiseptic conditions under which work may be done with this apparatus:—

Two liters of running water 1 cc were set. It grew 25 colonies of which the larger part was washed away. The running water was then divided into the four receptacles of the machine so that 500 cc was in each division. The air ventilator was operated for five hours and the ingoing air warmed with the following result:—

No. 1 Compartment—	Water loss 180 grains—1 dead colony in 1 cc.
No. 2 " "	—128 grains water evaporated—9 large dead colonies in 1 cc.
No. 3 " "	—166 grains water evaporated—2 large dead and 7 living colonies in 1 cc.
No. 4 " "	—123 grains water evaporated—7 large dead and 4 small colonies in 1 cc.

From this experiment it is evident that the germ number of the water by the drying process has not been increased but considerably decreased. In another test sterilized water was used and the air admitted was not warmed. In each compartment 250 cc of sterilized water dried for five hours, after which 1 cc of each tray was tested. All four tests remained free from germs. Number of trays. . . . . 2 3 4

## ELECTRO-CHEMISTRY APPARATUS

Storage Batteries Are Listed On Page 66

- 26700. Switch Board for the Demonstration of Ohm's Law.** By means of ammeter, voltmeter and resistance connected with open connections, the operation of Ohm's law can be demonstrated to a comparatively large class, C, E and R being easily legible from the three scales, in amperes, volts and ohms. Size 75 x 60 cm.  
**Duty Free**..... 49.50      **Duty Paid**..... 59.40
- 26704. Apparatus for the Demonstration of Faraday's Law** and for the determination of equivalent weights, showing in a very instructive manner the separation of heavy metals from solutions of their salts, such as copper from copper sulphate, silver from silver nitrate, etc., and at the same time the equivalent deposits of the different metals with the same current. The apparatus consists of two (or more if necessary) balances of the specific gravity type with rider pointer and scale and, suspended from one arm, the platinum cathode in the electrolyte. As anode a plate of the metal to be deposited upon the cathode is usually used and electrolysis established with a current of from .1 to .2 amperes. The illustration shows two balances set up in connection with ammeter, rheostat and battery. Price includes only the balances, set of riders and glass cell. See *Zeitschrift für den physikalischen und chemischen Unterricht* XXV 4, page 270 and *Zeitschrift für Elektrochemie* XVII 1, page 45.

26756. **Switch Board, Veit, for Quantitative Electrolytic Analysis**, with two gold plated rotating spindles, the polarity of which is reversible by means of switch; each spindle connected with six point switch, advancing the current from .05 amperes to .5 amperes, and additional switch from 1 ampere to 5 amperes. Ammeter reads from .05 to 5 amperes, with connections so that readings may be taken separately from either spindle. The container support will hold a platinum dish up to 3½ inches in diameter, with platinum contact points to insure good metallic contact when dish is used as either anode or cathode. Complete outfit is mounted on polished slate slab 31 x 18 inches supported by angle-iron braces. This switch board obviously can not be connected with an alternating current unless same is transformed by use of motor generator set..... 100.00
26760. **Switch Board**, same as above but with two revolving spindles..... 150.00

No. 26761

26764. **Electrolytic Outfit, Herman, for Quantitative Copper Analysis**, etc., with revolving anodes and cathode of platinum gauze. Assays are quickly made. Cabinets are made up of any number of units, each unit having an individual motor so that one or more units may be operated at one time. Can not be used on alternating current excepting with motor generator set. The outfit is neatly mounted in a hardwood case with a glass door, which protects the motors from the nitric acid fumes. Complete in cabinet with voltmeter and ammeter. Platinum electrodes are furnished at the market price of platinum. Approximate weight of anodes, 4.25 grams, cathodes, 9.00 grams.

26816. Double Net Electrode, Pure Nickel, Fischer..... 10.00  
Note:—For Platinum Electrodes see Platinum Ware.
26820. Electric Stirrer and Rotating Anode Apparatus, consisting of motor which can be furnished for either alternating or direct current, 110 or 220 volts; adjustable arm for holding the anode or stirring rod with suitable attachment for electrolysis current and rheostat for regulating speed from 50 to 1000 revolutions per minute. Recommended for depositing metals in quantitative analysis. Price does not include crucible anode or dish shown in illustration, nor electrolytic stand with glass upright. Please specify voltage and current in ordering..... 25.00

No. 26821

No. 26832

26824. Speed Counter, Fischer, for conveniently determining the speed of the stirring device..... 7.00
26832. Potentiometer (Compensation Apparatus), Fischer; a quick and convenient measurement and check of cathode potentials when determining and separating metals by means of electrolysis. The instrument consists of a rectangular walnut case with a convenient and handy arrangement of the following:—  
A moving coil voltmeter for 0-2.5 volts with divisions of 0.05 volts; a moving coil galvanometer with pointer and scale divided 10-0-10, sensitiveness  $1^\circ = 0.000004$  amperes; a current switch for the auxiliary battery; a key; a sliding resistance and four terminals with suitable connections for battery and electrolysis. The sliding resistance is readily removable for cleaning. See A. Fischer, *Elektroanalytische Schnellmethoden*. Enke, Stuttgart 1908 and A. Fischer, *Chemiker-Zeitung* Cöthen 1909, No. 37, p. 337.  
Duty Free..... 55.50 Duty Paid..... 66.60

26836. **Apparatus for Rapid Electrolysis in a Magnetic Field**, consisting of a solenoid of insulated copper wire, inside of which is an iron cylinder to strengthen the magnetic field, the entire being covered by an iron mantle which serves to protect the winding and, at the same time, concentrate the lines of force. Connections are provided permitting the use of the same circuit for exciting the solenoid and conducting the electrolysis. The apparatus is intended for a 16 volt direct current circuit but may be conveniently used on regular lighting circuits of 110 or 220 volts direct current with additional resistances. Without electrodes..... 21.00

**GALVANOMETERS, DEMONSTRATION**, designed primarily for lecture table use, with transparent scale graduated on both front and rear so that same is visible to the audience as well as to operator. With case and base of polished mahogany, with glass both front and back. These instruments are convenient for use as Galvanoscopes, i. e., for the indication of the presence and polarity of electric currents, or as Galvanometers as the angle of deflection is proportional to the strength of the current. They are made in two systems, i. e., the electromagnetic or soft iron system with air damping device, and the moving coil or Deprez d'Arsonval system. With the set of resistances and shunts they can be used as volt and ammeters reading from 0 to 250 volts and from 0 to 50 amperes and, in addition, they are offered below in both systems with special scales graduated in both volts and amperes.

	Duty Free	Duty Paid
26840. <b>Galvanometer, Demonstration</b> , with soft iron (electromagnetic) system, as above described.....	13.50	16.25
26844. <b>Galvanometer, Demonstration</b> , with moving coil (Deprez d'Arsonval) system, as above described.....	15.00	18.00
26848. <b>Set of Four Resistances and Three Shunts on Baseboard</b> , for use with above Galvanometers. Can be connected singly with the instruments for measuring voltage from 0 to 1, 0 to 10, 0 to 100 and 0 to 250 volts and current from 0 to 1, 0 to 10 and 0 to 50 amperes.....	12.00	14.40

**DEMONSTRATION VOLT AND AMPERE-METERS.** These consist of the above Galvanometers with special scales reading directly in volts and amperes as indicated.

26852. <b>Demonstration Ampere-Meter</b> , with soft iron (electromagnetic) system, for either direct or alternating current, 1 to 60 amperes.....	15.00	18.00
26856. <b>Demonstration Voltmeter</b> , as above, 4 to 100 volts.....	15.00	18.00
26860. " " " " 100 to 250 volts.....	18.00	21.60
26864. " <b>Combined Volt and Ampere-Meter</b> , as above, with scale 0 to 12 volts and 0 to 6 amperes.....	19.50	23.40
<b>Note:</b> —Please state in ordering whether instrument is to be used on direct or alternating current.		
26868. <b>Demonstration Ampere-Meter</b> , with moving coil (Deprez d'Arsonval) system, for direct current only, 0 to 50 amperes.....	16.50	19.80
26872. <b>Demonstration Voltmeter</b> , as above, 0 to 500 volts.....	16.50	19.80
26876. <b>Demonstration Universal Galvanometer</b> , scale 2-0-2 milliamperes, 100-0-100 millivolts, with resistances by which the range is increased to 10 milliamperes, 100 ohms and 1 volt.....	21.00	25.20
26880. <b>Separate Shunts</b> , for above, from 100 millivolts to 50 amperes, each.....	3.60	4.35

No. 26896

Nos. 26908 to 26910 Showing Various Scales

No. 26900

Nos. 26908 to 26910 Showing Various Scales

26896. Galvanoscope, for Wheatstone Bridge measurements, determination of E. M. F. by means of the compensation method, etc., internal resistance 6 ohms, sensibility .02 milliampere = 1° of scale; diameter 100 mm, height 50 mm..... 8.25
26900. Galvanoscope, Paschen, with internal resistance of 10 ohms, sensibility of .002 milli-ampere = 1° of scale, and with an internal resistance of 6 ohms and a sensibility of .0002 milliampere = 1° of scale. In an iron case for magnetic protection. Sensibility must be specified in ordering.  
Duty Free..... 12.75      Duty Paid..... 15.30
26904. Galvanoscope, as above, in brass case.  
Duty Free..... 16.35      Duty Paid..... 19.65

**WESTON MINIATURE PRECISION DIRECT CURRENT AMMETERS, VOLTMETERS AND VOLT-AMMETERS, Model 280.** These instruments embody all the well known advantages of the Weston instruments being absolutely dead beat and extremely sensitive and so designed that they may be left continuously in circuit under full load without overheating or causing an appreciable change in the indications. The separate voltmeters have a resistance of about 100 ohms per volt while the volt-ammeters have a resistance of approximately 50 ohms per volt. The cases are made of sheet steel finished in dead black and the dimensions are 4.6 x 4.4 x 1.5 inches and any of the instruments may be carried in an ordinary coat pocket. A great variety of ranges is offered, i. e., the voltmeters from 50 milli-volts to 150 volts, and the ammeters from 50 milli-amperes to 30 amperes. They are admirably adapted to all kinds of commercial and experimental testing falling within their limits of e. m. f. and current and are very adaptable for individual students use in laboratory work. Particular attention is called to the double and triple scale instruments and the volt-ammeters. The triple range volt-ammeter is in reality six instruments in one case, since there are three current ranges and three e. m. f. ranges. Range must be specified in ordering.

Rheostats, Ruhstrat, Universal Form of Slate, Type U, consisting of two resistances mounted side by side on aluminum feet. The two resistances may be operated independently, in series, or in parallel, each being provided with separate contact slide. This form of Rheostat lends itself to a great variety of experimental purposes.

Metallic Tube Rheostat. Type F

Universal Tube Rheostat. Type U

**Rheostats, Ruhstrat, Metallic Tube Form, Type F**, on foot, consisting of thin walled metal tubes thoroughly insulated with enamel and wound with resistance wire of a special alloy which is so well insulated by means of a microscopically designed oxide deposited on the surface as to permit the wire to lie in contact.

**Rheostats, Ruhstrat, Universal Metallic Tube Form, Type U**, on feet, consisting of two metal tubes as in Tube Form Type F, but with two independent contacts permitting the use of the resistances either separately in series, or in parallel. A new and useful form in laboratory work. Price twice those quoted above for Tube Form, Type F.

**Note**—In ordering Rheostats please specify carefully current capacity, resistance, and size desired.

[illegible]

- 27476. Extraction Apparatus, Soxhlet**, complete with flask and condenser. Consisting of bulb condenser, Soxhlet extraction tube No. 27456, and wide mouth Jena extraction flask fitted with specially selected fine grain cork stoppers.  
 Inside diameter of Soxhlet Tube, mm. . . . . 30 38 50  
 Each . . . . . 3.25 3.50 4.50
- 27480. Extraction Apparatus, Soxhlet**, same as No. 27476 but with ground joints instead of cork stoppers. Each apparatus is furnished with three Jena glass flasks ground to fit extraction tube.  
 Inside diameter of Soxhlet tube, mm. . . . . 30 38 50  
 Each . . . . . 4.50 5.00 6.00
- 27484. Extraction Apparatus, Soxhlet**, same as No. 27480, i. e., with ground joints throughout, but with Hopkins Condenser in place of bulb condenser. With three Jena extraction Flasks ground to fit.  
 Inside diameter of Soxhlet tube, mm. . . . . 30 38 50  
 Each . . . . . 5.00 5.50 6.50
- 27488. Extraction Apparatus**, consisting of Soxhlet tube 38 mm inside diameter, Hopkins condenser and Knorr flask; 100 cc, for mercury seal. The joint between the condenser and extraction tube is ground air-tight . . . . . 6.00
- 27492. Extraction Apparatus**, exactly same as No. 27488 but with Sy Flask for mercury seal. . . . . 6.00
- 27496. " Knorr**, complete with condenser, extraction tube with perforated platinum disc and Knorr flask. See U. S. Department of Agriculture, Bureau of Chemistry, Circular No. 69, Walter & Goodrich "Improvements in the Knorr Fat Extraction Apparatus" . . . . . 6.50
- 27500. Extra Condenser** with adapter sealed on. . . . . 3.60
- 27504. " Extraction Tube**, with platinum disc. . . . . 3.00
- 27508. " Tube**, improved form with nickel disc and wire spring. . . . . 1.20
- Note**—If Knorr flasks are desired with two  $\frac{1}{4}$  inch holes in neck for return of flow of ether, an extra price of 10¢ per flask is charged.
- 27512. Extraction Apparatus, Ringer**, with Hopkins condenser. An extraction apparatus well suited for continuous extractions from liquid media. The ether as it condenses in the condenser drips down into a central tube which permits of its escape through small openings at its bottom. The ether then, because of its gravity, rises to the surface of the medium to be extracted. This apparatus is well adapted for the extraction of  $\beta$ -oxybutyric acid from diabetic urine. As used in the Laboratory of Physiological Chemistry, Medical Department, University of Pennsylvania. All joints ground air-tight. Inside diameter of extraction tube 38 mm, length of extraction tube 37 cm. Complete with three flasks ground to fit. . . . . 8.00
- 27516. Extraction Apparatus, Friedrichs**, for continuous liquid extractions. Complete with counter current condenser and three flasks, with all joints ground air-tight. The condensed ether from the condenser drops into the funnel tube of the extractor and reaches the bottom through the screw-cylinder. It then ascends and the new drops enter the liquid to be extracted. When the ether layer reaches the lower tube the excess runs back into the flask and the process goes on. By means of the stopcock funnel and the lower stop-cock, liquid may be introduced or drawn off without interrupting the operation. See *Zeitschrift für anal. Chemie*, 1911 . . . . . 15.00
- 27520. Extraction Apparatus, Teas**, as used in tanning laboratories; extractor, flask and reflux condenser are of heavy copper, the flask being of 1 quart capacity. Original form without side tube A. 17.40
- 27524. Extraction Apparatus, Teas**, as above with side tube A for flooding contents of extraction. . . . . 18.00
- 27528. Extraction Apparatus, Yocum**, as used in tanning laboratories. The extractor and flask are of heavy polished copper, the latter of 1 liter capacity. The condenser is of brass ground in. . . . . 24.00

- 27532. Extraction Apparatus, Cottle**, frequently referred to as the Underwriter's Laboratories form. See November *Journal of Industrial and Engineering Chemistry*, 1912; consisting of a metallic spiral reflux condenser supporting a porcelain Gooch crucible by means of platinum or aluminum wire. All contained in a specially designed, long neck Erlenmeyer flask, the whole apparatus being only 6 inches high and 3 inches wide. Specially recommended for use in testing rubber compounds as used on wires and cords. . . . . **2.50**
- 27536. Extraction Apparatus, for Rubber Analysis**, as recommended by the Joint Rubber Insulation Committee. See *Journal of Industrial and Engineering Chemistry*, January, 1914. This apparatus is in general like the preceding form but with a syphon cup for holding the paper extraction thimble instead of a Gooch crucible as used in the Cottle form. In addition, all of the dimensions are slightly different, being in exact accordance with the specifications of the Committee above referred to. . . . . **2.50**
- 27540. Extraction Apparatus**, as used in the Food Laboratories, Bureau of Chemistry, U. S. Department of Agriculture. Parts are supplied separately at the prices given or the complete outfit at the total of the three prices.
- A—Cylinder, 20½ inches long, 2 inches in diameter, except at its lower or sealed end, which is enlarged to diameter of 3 inches for a length of 4 inches. . . . . **1.50**
- B—Condenser, 1½ inches in diameter, except at its upper end which is enlarged to a bulb 2½ inches in diameter, to permit its suspension in "A". . . . . **1.50**
- C—Thimbles, 6 inches long and 1½ inches in diameter, perforated ¼ inch from top with two ¼ inch holes placed opposite each other, capacity 100 cc, with straight upper rim. . . . . **.50**
- 27544. Extraction Apparatus, Reed**, as used for bark and wood extracts, etc.; in use in many tanning laboratories. Of polished copper, with polished condenser. Complete as shown in illustration. . . . . **18.00**
- 27548. Extraction Apparatus, Thorn**, with ground joint condenser.
- |                       |             |             |

| Each. . . . .         | <b>2.40</b> | <b>4.00</b> |
- 27552. Extraction Apparatus, Wiley**, with metallic condenser and top and with porcelain Gooch crucible. No stoppers are required and the arrangement permits double weighing of both residue and extracted matter. . . . . **5.00**
- 27556. Extraction Apparatus, Wiley-Richardson**, a simple form, recommended where much work is done on fats, oils, gums and resins, combining the simplicity and efficiency of the original Wiley apparatus with the maceration and percolation method of washing as in the regular Soxhlet apparatus. Complete with glass syphon cup as shown in illustration but without extraction thimbles. . . . . **5.00**
- 27560. Support and Gas Heating Apparatus for Extraction Apparatus**, consisting of extra large support, ring 95 mm, clamp, cast iron water bath, 120 mm, without burner or glassware. . . . . **2.50**
- 27564. Support and Electric Heating Apparatus for Extraction Apparatus**, consisting of large support, clamp and electric heater for three heats, 115 mm, the latter being set into the base of the support. These supports may be arranged in banks of three, six, twelve, etc., and form a convenient and satisfactory method of conducting extractions as each extractor may be operated at a given heat independently of the others. For either 110 or 220 volts. Voltage must be stated in ordering. **7.00**

No. 27568

27568. Support and Electric Heating Apparatus for Four Extractions, consisting of 4 supports, 4 clamps and electric hot plate, without glassware. A convenient arrangement as the hot plate is not permanently attached to the bases of the supports and may be used for other work as well, as may also the supports. 15.40

No. 27572

27572. Support and Heating Apparatus for Six Extractions, consisting of rectangular copper water bath, with water level, and special upright supports for six extractors. Can be heated either by gas or running hot water. Without glassware or burner. 24.00

No. 27584

27584. Revolving Support and Electric Heating Apparatus for Extraction Apparatus with copper condenser. The tank of the condenser is adjustable in height so that extractors of different sizes may be used. The temperature of the hot plate is high enough to volatilize solvents of the highest boiling point generally used in fat extractions. Where different temperatures are required small discs of asbestos may be inserted under the flasks. Very economical of space and of current. For either 110 or 220 volts. Voltage must be stated in ordering. 35.00

No. 27576

No. 27580

27576. Support and Electric Heater for Six Extractions, for heating by electric lamps. Box support is made of asbestos wood, with holes over the lamps used for heating. With iron uprights and adjustable metal rods with six clamps each. State voltage in ordering. Without glassware. 30.00
27580. Support with Electric Heaters for Six Extractions, similar to above but with electric hot plates with individual switches and support. The base is of sheet iron, 9 inches high, 5½ inches wide and 24 inches long. State voltage in ordering. 55.00

27588. **Fermentation Tubes**, for bacteriological work, small size; height of vertical tube 100 mm, outside diameter of tube 12 to 13 mm; with long tubulation for plugging and bulb carefully made to hold entire contents of vertical tube; on glass foot, ungraduated. . . . . .25
27592. **Fermentation Tube**, same size and shape as No. 27588 but without glass foot. . . . . .15
27596. " " same size and shape as No. 27588 with glass foot and tube graduated in cubic centimeters. . . . . .50
27600. **Fermentation Tube**, American Public Health Association standard. See "*Standard Methods for the Examination of Water and Sewage.*" Inside diameter of upright tube 15 mm, length of vertical tube 140 mm, diameter of bulb 38 mm, on glass foot. . . . . .35
27604. **Fermentation Tube**, same as No. 27600, but without glass foot. . . . . .20
27608. " " without bulb, so-called "fish hook" form; height of vertical tube 100 mm, outside diameter of tube 12 to 13 mm. . . . . .10
27612. **Fermentation Tube, Smith**, without foot, designed primarily for the cultivation of anaerobes, in exact accordance with the specifications given us by the author; carefully made as to all dimensions and as to the angle between the vertical tube and the bulb; in appearance similar to No. 27604. . . . . .30
27616. **Fermentation Tube Support**, of copper; for 10 tubes without foot, of the usual size. . . . . .2.50
27620. **Figures**, of steel, for stamping steel, iron, bullion, etc. In sets of 9. . . . . .1

27640. **Filtering Apparatus, Witt**, with ground in funnel and ground on glass cover with side tubulation for filtering into beaker, or other receptacle, under diminished pressure. Price does not include beaker. The main body of the jar is 16 cm high by 12 cm in diameter and ground in funnel in 9 cm in diameter. . . . . .4.50
27644. **Filter Apparatus, Martin**, for filtering toxins or for filling bulbs with sterile liquid by means of a filter or other suction pump. Consisting of Pasteur-Chamberland cylinder in special metal mounting with funnel and stopcock. All parts are demountable, permitting sterilization in the autoclave. Without stand, clamps or glass bulb these being indicated in illustration to show arrangement only. . . . . .12.60
27648. **Filter Apparatus, Martin**, complete with suitable support and clamps. . . . . .14.00
27652. **Filter Apparatus, Kitasato**, consisting of 1000 cc flask, filter cylinder with bulb and rubber stopper. . . . . .2.50
27656. **Filter Apparatus, Reichel**, improved form, for separating the bacteria in fluid cultures from their various products. Complete with special flask of about 150 cc capacity, filter cylinder and rubber and asbestos rings. . . . . .2.75

27660.	Filter Apparatus, Uhlenhuth and Weidanz, for filtering serums, etc., for immediate delivery into ampoules without exposure. With measuring tube on the side for measuring doses up to 2 cc. May be used with Berkefeld filter and glass mantle as indicated in illustration, but filter cylinder and glass mantle with rubber stopper are not included in the price. It may also be used with Maassen cylinder No. 27708 by means of asbestos ring and rubber cap. ....	6.00
27664.	Filter Apparatus, similar to above but with Silberschmidt filter held in place by rubber band with asbestos ring. Graduations on the tube permit the delivery of accurate doses into ampoules by means of pinchcock. Price does not include filter cylinder. ....	4.50
27668.	Filter Apparatus, same as 27664 with glass stopcock, but without filter cylinder. ....	6.00
27672.	Filters, Berkefeld, cylinders only with metallic head-pieces. As widely used in all laboratory work in the filtration of toxines and the preparation of sterile liquids of all sorts. These filters are furnished in three degrees of fineness:— "W" = very fine or slow filtering. "N" = normal or medium filtering. "V" = coarse or rapid filtering. Unless other specifications are given, the "N," or normal, filters are supplied on all orders.

No. 27720

No. 27724

No. 27728

27720. **Filter Apparatus for Pressure, Hill**, for the use of hydraulic pressure. By this method the material to be filtered is separated from the pressure medium by a soft rubber membrane. This avoids foaming and also permits the use of water instead of air pressure. City water service will usually furnish 40 lbs. per square inch, which is about three times the pressure of a vacuum filter. The force pump supplied increases this to 300 lbs. per square inch. At the left top of the chamber is a block tin funnel and tube, through which the liquid is introduced to the filter. To this tube inside the chamber a flexible rubber tube connects the soft rubber filter bag. Within this bag is placed the Berkefeld, or similar, bougie, the nozzle of which fits through a bushing at the bottom of the filter chamber and delivers the filtered liquid below. The side funnel tube of tin is soldered into a brass nut, which, together with the tube, is readily removable for sterilization. There is a rubber washer at the base of this nut and a screw stopper in the funnel to prevent back flow under pressure. When filled the screw plug is inserted in the funnel and the contents of the bag may be subjected to the required pressure. The three-way cock enables one to admit water to the chamber, to close the chamber from the service pipe, leaving it under pressure, and to drain the chamber. The vertical pipe with pressure gauge at the top is an air pressure storage chamber and is for the purpose of keeping a fairly uniform pressure without continuous pumping. There is a vent cap at the top. This should be kept tightly closed. If it leaks, air will be gradually forced out and the chamber will be kept filled with water. In that case its usefulness would be temporarily impaired and, moreover, a single stroke of the pump would then raise the pressure beyond a safe point. Complete with one 8 x 1 inch Berkefeld cylinder and 1 liter rubber bag..... 92.00

27721. **Extra Rubber Bag**, 1 liter capacity..... 1.50  
 27722. " " 150 cc capacity..... 1.35

27724. **Filter Apparatus**, for filtering toxins by means of pressure. As supplied by us to the Antitoxin Laboratories of the Philadelphia Board of Health. Consisting of a cast iron bowl, enameled inside, 20 inches deep and 6 inches in diameter, with air-tight cover held down by four wing nuts, and with pressure cock attached and bracket for fastening on wall. Attached below is a detachable, nickel plated metal cylinder with a ground in stopper, carrying a Berkefeld cylinder 10 x 2 inches. Price includes the Berkefeld cylinder..... 50.00

27728. **Filter Apparatus for Pressure, Chamberland-Pasteur**. Original French make, with manometer, pressure pump and Pasteur-Chamberland cylinder.

 Each..... .50      .70      1.25

No. 27736

No. 27736

27736. Ultrafiltration Apparatus, Bechhold, as used in the Kgl. Institut für Experiment. Therapie, Frankfurt, a. M., consisting of a double filtration apparatus, one with stirrer and one with glass trough, with ground-on lid, separatory funnel, manometer and twelve clamps, but without the ultrafilter discs.

Duty Free..... 80.00

Duty Paid..... 115.00

27740. Ultrafilter Discs, Bechhold, for use in the above apparatus, as used for filtering and separating colloids and crystalloids, albumenoids, albumoses, ferments, soaps, etc., as well as for testing beer, milk, etc. In Physiological Chemistry it is most useful in the examination of animal fluids such as urine, serous liquid, blood, etc., and in Bacteriology during the examination of the products of bacterial growth (toxins and antitoxins); while in Pharmacology, filtration of decoctions and extracts is facilitated by its use. The permeability of the ultrafilter to various colloids depends on its density, i.e., to the percentage content of nitrocellulose in the acid collodion impregnating the filter, i.e., the higher the percentage the denser the filter. A 4½% ultrafilter will, generally, prevent the passage of haemoglobin from a 1% solution. Small variations in either direction can not be completely avoided. Each filter is sent out between perforated parchment paper immersed in water to which a little chloroform has been added to prevent the growth of micro-organisms and the whole contained in an aluminum case sealed by a rubber ring, as after a filter becomes dry it is useless. The filters are impregnated in vacuo with acetic acid collodion and are supplied under the designations of 1½, 3, 4½, 6 and 7½%, according to the content of nitrocellulose in the collodion. The filters are 90 mm in diameter.

Designation..... 1½% 3% 4½% 6% 7½%

Duty Paid, per case of 10..... .90 1.20 1.40 1.75 2.00

27744. Filter Discs, Alundum. These discs can be advantageously used to replace perforated porcelain plates in many operations, obviating the necessity of preparing an asbestos mat. They are easily cleaned by reverse washing and ignition, permitting of their repeated use. They are supplied in two degrees of porosity RA 225 Medium and RA 98 Porous, which must be specified in ordering. Edges are moulded to a 60° bevel to fit funnels.

**27748. Filter Cones, Alundum.** These may be used in any 60° funnel by stretching a wide band of rubber tubing over the funnel. They have a large filtering area and can be thoroughly washed from all soluble salts and are recommended for the filtration of gelatinous and slow filtering solutions. They may be cleansed by reverse washing, reduced to a constant weight by ignition and used repeatedly. They are furnished in three degrees of porosity, RA 320 dense, RA 321 medium and RA 322 porous. Please specify porosity in ordering. Each cone is supplied with wire stand as shown in illustration.

No. 27796

27792. Filter Paper, Munkell, No. 0. Same as above in sheets 480 x 480 mm. Per quire..... 2.50
27796. Filter Paper, Munkell, No. 1F. The Original Swedish Paper. Of best linen material, by some claimed to be the most perfect filtering paper made; leaves one-third less ash than formerly, probably the smallest amount of any of unwashed paper. Cut in round filters, 100 filters in a package, five packages in a box of birch bark.

## A R T H U R H. T H O M A S C O M P A N Y

27840.	<b>Filter Paper, C. S. &amp; S. No. 575.</b> Hardened filters, especially adapted for use with the filter pump as they cling closely to the sides of the funnel. These hardened filters will retain the finest precipitates and resist pressures of 2 or 3 atmospheres when moist. Another important feature is durability in continued use, one sheet of this paper being available for several operations, as the precipitate can be scraped off without removing the fluff from the filter. They are probably the only papers which are suitable for the filtration of caustic liquids, requiring a long time to deposit, such as solutions of bichloride of tin ( $\text{SnCl}_2$ ), chloride of antimony ( $\text{SbCl}_3$ ) also acids and strong alkalis.

27844.	<b>Filter Paper, C. S. &amp; S. No. 588.</b> Folded Filters. For general use.								
	Diameter mm.....	125	185	240	320	385	500		
	Per 100.....	.32	.48	.68	1.10	1.45	2.40		
27848.	<b>Filter Paper, C. S. &amp; S. No. 589 "Black Ribbon."</b> Washed in hydrochloric and hydrofluoric acid, of soft and very loose composition, filtering very quickly. Used for deposits which do not pass through easily, as is the case with many metals. Specially adapted for use in laboratories of metallurgy. For $\text{BaSO}_4$ and similar deposits passing through easily, these filters should not be used.								
	Diameter mm.....	55	70	90	110	125	150		
	Ashes, gram.....	.00004	.00007	.00011	.00017	.00021	.00025		
	Per 100.....	.52	.55	.82	1.00	1.10	1.30		
27852.	<b>Filter Paper, C. S. &amp; S. No. 589 "Blue Ribbon."</b> Washed in hydrochloric and hydrofluoric acid, and made from close, firm material. We recommend them to be used in connection with an air-pump or if possible as folded filters. They are suitable for the finest precipitations, which are not kept back by the black or white ribbon.								
	Diameter mm.....	55	70	90	110	125	150		
	Ashes, gram.....	.00004	.00007	.00011	.00017	.00021	.00025

27864.	<b>Filter Paper, C. S. &amp; S., No. 590.</b> These filters, which are also treated with HCl and HFl are thinner than the brands specified under No. 589. They therefore contain slightly less ash and filter and are slower than No. 589—white ribbon—but otherwise readily retain fine precipitates.								
	Diameter mm.....	55	70	90	110	125	150		
	Ashes, gram.....	.00002	.00003	.00005	.00007	.00009	.00013		
	Per 100.....	.65	.70	1.05	1.25	1.40	1.65		
27868.	<b>Filter Paper, C. S. &amp; S., No. 602,</b> hard or extra hard, a paper of especial density and hardness. The finest particles or precipitates which no other paper can filter are retained. Consequently these papers must not be expected to work quickly and they are recommended for use with an air pump or as folded filters. The "hard" filters are supplied if grade is not specified in ordering. After filtration through these papers the superphosphates are rendered soluble for the purpose of determining the amount of the phosphoric acid soluble in water, and solutions which are to be polarized and impregnated with acetate of lead, become clear at once.

| 28004. | Filter Pump, On Base, with stopcocks for water and air connections.....   |                 |                 | 10.00           |
| 28008. | Filter Pump, Water Jet Form, displacing $\frac{1}{2}$ cu. ft. of air per minute with 20 lbs. water pressure. Will exhaust a 1 gallon vessel to a vacuum of 29 $\frac{1}{2}$ inches of mercury in 10 min. with a 10 lbs. water pressure and in 5 min. with a 20 lbs. water pressure. Very useful for filtrations, percolations and distillations in laboratory work. Complete with vacuum gauge, connecting tee and two stopcocks..... |                 |                 | 12.00           |
| 28012. | Filter Pump, as above but for operating by steam instead of water, with steam connections....   |                 |                 | 12.00           |

28016.	Filter Pump, for both suction and pressure; with metal reservoir. Filter pump is removable. Stop-cocks and fittings are nickel plated and reservoir is of zinc finished in bronze lacquer.	8.00
28020.	Filter Pump, as above, with manometer.	15.00
28024.	Metal Band for either of above, with holes to conveniently screw to wall.	.50
28028.	Filter Tubes, for filtering through asbestos, glass wool or glass powder.	
	Length, mm.	150 200
	Each.	.10 .15
28032.	Filter Tube, Fresenius, with bulb, 20 mm inside diameter at top.	.20
28036.	Filter Tubes, for use with Gooch, Alundum and similar crucibles. Tube of 32 mm inside diameter is suitable for Gooch crucible No. 25294, 25 cc or Alundum crucible No. 25266, 25 cc. Rubber tubing suitable for making air-tight connection with Gooch crucible is listed under No. 46236.	
	Inside diameter at top, mm.	18 20 25 28 32 37 40
	Each.	.18 .20 .22 .25 .30 .35 .40
28040.	Flask, Acetylation, with ground in condensing tube, as used in determining menthol in oil of pepper-mint, etc.	1.25
28044.	Flasks, Assay, Best Bohemian Glass. Capacity, cc.	50 100 250
	Each.	.15 .18 .20
28048.	Flasks, Assay, Best Bohemian Glass, conical high form, with narrow mouth and spout.	
	Capacity, cc.	50 100 250 500
	Each.	.15 .20 .25 .30
28052.	Flasks, Assay, Best Bohemian Glass, conical wide form, with spout.	
	Capacity, cc.	50 100 250 500
	Each.	.15 .20 .25 .30
28056.	Flasks, Assay, Best Bohemian Glass, pear shape, with long neck.	
	Capacity, cc.	50 100 250
	Each.	.12 .15 .25
28060.	Flasks, Best Bohemian Glass; light weight, low form, with extra wide mouth and flat bottom, so-called Carbonic Acid flasks. Capacity, cc.	25 50 100 150 250
	Each.	.10 .12 .15 .20 .25
28064.	Flask, for Copper Determinations, with flaring neck. Capacity, cc.	180 250
	Each.	.20 .25
28068.	Flasks, Joliet, much heavier than boiling flasks but made to stand heat; as used in iron and steel analyses. Capacity, cc.	50 1000 2000
	Each.	.25 .35 .60
28072.	Flasks, Johnson, for Sulphur Determination, for use in iron and steel analysis. With heavy ring neck, taking a No. 6 rubber stopper, capacity 275 cc to base of neck; height 165 mm.	.25
28076.	Flasks, Low, for Copper Determination; cylindrical neck with flaring top.	
	Capacity, cc.	125 250
	Each.	.18 .30
28080.	Flasks, Soil Analysis, of Jena Glass, with long condenser tube ground in with air tight joint.	
	Capacity, cc.	200 500
	Each.	1.60 2.00

**FLASKS, VOLUMETRIC, PRECISION, graduated by weighing at 20°C. in accordance with the specifications of the Physikalisch-Technische Reichsanstalt, with individual control number. These flasks are offered with our unofficial factory certificate and, in addition, with the Physikalisch-Technische Reichsanstalt certificate and control stamp, i. e., the official certificate of the German government.**

#### Precision Volumetric Flasks with Unofficial factory certificate

These certificates are made out in the factory in exact accordance with the methods used by the Physikalisch-Technische Reichsanstalt and no flask is certified unless the error falls within the limit permitted by the P. T. R. The data on these certificates may be used as a check where flasks are calibrated in the laboratory or with entire reliance upon the accuracy of the figures given.

<b>28364. Flasks, Volumetric, Precision, without stopper, adjusted to contain; with unofficial factory certificate.</b>									
Capacity, cc.....	50	100	250	500	1000	2000	3000	5000	6000
Each.....	.65	.70	1.00	1.25	1.50	2.30	3.00	4.00	5.00

28428. Flasks, Watering, as used in the determination of water requirement of plants. This flask is of special shape and of exactly 2000 cc capacity when filled even with the ground rim, there being no other mark on the flask. This feature enables them to be quickly filled by total immersion and insures delivery of the exact amount of water when placed in a vertical position over the pot, as illustrated in Bulletin 284 of the U. S. Department of Agriculture, Bureau of Plant Industry. .... 1.50

28432.	Flask Heater, heated by electric incandescent lamp, for conducting ether and similar distillations without danger. On support, with connecting cord but without flask. Will accommodate a 1000 cc flask.	4.00
28436.	Flask Heater, Electric, of copper, with convenient ring top. Diameter $8\frac{1}{2}$ inches, height 4 inches. Furnished with three heats, regulating switch, 6 ft. of cord and switch for connecting. Requires 500 watts. Works equally well on direct or alternating current but voltage must be specified in ordering.	12.00
28440.	Flask Heaters, of sheet iron, with ventilating openings and asbestos inset.

No. 28901

No. 28912

No. 28916

28900. Furnace, Fletcher Crucible No. 15, for operation without blast. Takes crucibles up to  $4 \times 3\frac{1}{2}$  inches. For operation with either illuminating gas, natural gas or gasoline gas. Requires  $\frac{1}{2}$  inch diameter gas feed pipe. Price includes 6 ft. of pipe, a No. 3 clay crucible, clay cylinder and tongs 16.00
28904. Furnace, Fletcher Crucible No. 40, for illuminating gas only. Requires blast from foot blower such as No. 21968 and  $\frac{1}{2}$  inch gas supply pipe. Takes No. 00 clay crucible. Complete with one No. 00 crucible, but without foot blower. 3.50
28908. Furnace, Fletcher Crucible No. 40a, Injector. For use with illuminating gas, natural gas or gasoline gas. Requires  $\frac{1}{2}$  inch supply pipe and takes a No. 00 clay crucible. May be used with foot blower No. 21968 and, where regular gas supply is not available, with gasoline gas generator. Complete with one No. 00 clay crucible, but without foot blower. 4.00
28912. Furnace, Fletcher Crucible Kerosene Blast No. 40B, for use with refined petroleum or kerosene oil. Requires foot blower No. 21968 and takes No. 00 clay crucible. Complete with one No. 00 clay crucible but without foot blower. 5.50
28916. Furnace, Fletcher Crucible Kerosene Blast No. 41E, similar to No. 28912 but larger. Complete with one No. 1 clay crucible and two burners, but without foot blower. 10.50
28920. Furnace, Fletcher Crucible Kerosene Blast, similar to No. 28916 but larger. Complete with one No. 3 clay crucible and three burners, but without foot blower. 13.00

No. 28924

#### 28924. Furnace, Fletcher Combined Muffle and Crucible No.

141, for use with illuminating gas, natural gas or gasoline gas. Requires foot blower No. 21968 and 1 inch bore supply pipe. Takes a No. 3 crucible or a muffle  $3\frac{1}{2} \times 2\frac{1}{2} \times 6\frac{1}{2}$  inches, or, when used as a crucible furnace only, takes a No. 6 crucible. Complete with muffle and one No. 3 clay crucible, but without foot blower. 11.00

No. 28928

No. 28936-40

- 28928. Furnace, Fletcher Muffle, for exact temperatures not exceeding that of the fusing point of copper.** For use with illuminating gas, natural gas or gasoline gas. Complete with muffle, dome, crucible tongs and 6 ft. of pipe.
- | Number.....                       | 3  | 4  | 5  | 6   |

**Combustion Furnace, Heraeus, Type B,** exactly same as No. 29032 but with tube 30 mm inside diameter and maximum temperature of 1350° C. Length of heating tube, cm..

29036.	Furnace only, without rheostat.....	57.00	69.00	78.50	90.50
29037.	“ “ with rheostat for 110 volts.....	72.00	91.00	104.10	124.50
29038.	“ “ “ 220 “.....		91.00	104.10	124.50

**Combustion Furnace, Heraeus, for Reactions in Vacuum or in Gases other than Air.** This is a platinum wound furnace of the same type as No. 29032 and No. 29036 but with larger internal chamber so that a special tube with closed end may be inserted. One end of the tube is provided with connections for the thermo-couple of a pyrometer and the other end with a mica observation window and inlet and outlet tubes for the gases. Tubes can be used of Royal Berlin porcelain, glazed inside and outside, opaque fused silica or Marquardt mass. For temperatures under 1000° C. the Royal Berlin glazed porcelain tubes are recommended as being more likely to be entirely gas tight. We guarantee none of the tubes to be absolutely gas tight under all conditions. With silica or Marquardt tubes a temperature of 1300° C. can be obtained. Prices include a suitable tube of Royal Berlin porcelain with the end fittings as shown in illustration but do not include pyrometer or thermo-couple. Inside diameter of the tube is 1 1/8 inches.

29042.	“ “ “ 220 “.....	127.25	185.00

**Combustion Furnace, Heraeus, for Organic Analysis.** Consists of two mutually independent furnaces mounted on wheels which operate on top of a supporting frame. A grooved metal trough extends through both furnaces and carries a combustion tube which should be about 90 cm in length. Each furnace is provided with a separate rheostat. The larger furnace is 35 cm in length and will cover a charge of copper oxide about 25 cm long. Prices include platinum.

	Voltage.....	110	220
Each.....		135.00	124.50

No. 29018

29048. Combustion Furnace, Heraeus-Dennstedt, for elementary organic analysis. See *Zeitschrift für angewandte Chemie* 1905, 18, 1134. For 110 volts the furnace takes about 16 grams of platinum and the 220 volt takes about 8 grams. This is not included in the price and is added to the cost of the furnace at market price. The glassware and supports constituting the train after Dennstedt are not included in the price nor is the combustion tube. Furnace only, for either 110 or 220 volts, Duty Free..... \$2.50
29052. Complete Set of Glass Parts, rubber connections and supports for above, outfit to be arranged as shown in illustration. Duty Free..... 27.00

No. 29056

No. 29060

Furnace, Electric, Hoskins Crucible Type FA, for operation between a minimum of 316° C and a maximum of 1000° C, for either 110 or 220 volts alternating or direct current. Life of the heating element of nickel chromium about 1000 hours if operating temperature is kept at maximum or below by means of rheostat which should always be used in connection with the furnace for safety as to burn outs and accurate control. Power consumption of No. 101 is 450 Watts and of No. 103 is 1000 Watts. Voltage must be specified in ordering.

	Extra Heating Units.....	3.00	4.00	8.00

#### Note Regarding Use of Hoskins Type FA Furnaces

All Hoskins Type FA Furnaces are wound so that when connected to the proper voltage (110 or 220 volts alternating or direct) which is always stamped on the name plate, they will reach the maximum safe working temperature of 1832° F or 1000° C in approximately one hour. The Type FA Tube and Crucible Furnaces require approximately 40 minutes to reach this temperature. If these furnaces are left on the full line voltage after they have reached 1832° F the temperature will continue to increase and the resistance element will consequently burn out in a short time. To guard against this, a rheostat should always be connected in series with the furnace, and after the furnace has reached the desired working temperature the rheostat handle should be turned back part of the way toward the starting position. The proper point at which to set the rheostat handle in order to maintain any desired temperature may readily be determined by trial. Where the furnace is frequently operated at the same temperature it is convenient to make a mark on the rheostat at the proper point for maintaining this temperature, and after furnace has reached the proper temperature the rheostat handle can be set at the mark and left there, thus insuring that the proper temperature will not be exceeded.

#### Note Regarding Use of Hoskins Type FB Furnaces

Hoskins Type FB Furnaces which are operated in connection with rheostat control, i. e., Type FB 101, 102, 105, 202 and 301 are controlled in the same manner as Type FA Furnaces, the use of the transformer with the above mentioned Type FB Furnaces being simply for the purpose of stepping down the line voltage to the proper pressure for these furnaces.

No. 29072

Nos. 29076 and 29080

29072. Furnace, Electric Arc, Moissan Type, new model for experimental work. Current consumption 100 amperes at 50-60 volts. Accommodates a crucible 50 mm high by 45 mm diameter or a dish 35 mm high by 28 mm diameter. Without cables.

No. 29100

Large Furnace with Top and Cover removed  
and Heater Unit disconnected

No. 29100

Large Furnace, Assembled and Connected with  
Special Transformer

Cascade Attachment for Large Furnace taken apart

Heater Unit of Large Furnace Cascade Attachment Assembled

**FURNACES, HIGH TEMPERATURE ELECTRIC, NORTHROP**, a new construction of electric furnace on a non-vacuum principle wherein the furnace itself develops in its heating chamber an atmosphere of carbon monoxide. The furnaces consist essentially of three main parts, a graphite heater unit, an inner compartment of moulded refractory material into which the heater unit fits, and an outer compartment filled with powdered refractory material, with outside jacket of polished monel metal. The furnaces are of the vertical type and heating chamber in the large model is a tube  $1\frac{1}{2}$  inches internal diameter and 12 inches long, and in the small model 1 inch in diameter and  $5\frac{1}{4}$  inches long. The Cascade Attachment for the large model is inserted in the chamber of the large furnace after same has been brought to a high temperature and the energy from the same transformer transferred by means of switch to the heating element of the attachment. The resistor-unit of the Cascade Attachment consists of a tube of re-graphitized Acheson graphite containing a crucible 11 mm internal diameter and 70 mm deep. These furnaces operate only on alternating current of low voltage.

**Transformer for Large Model**—This is specially made for a primary of 110, 220, 220 or 240 volts with five taps offs on its winding and a switch whereby the secondary voltage may be regulated as many steps for a variety of temperatures. Capacity 4 K. W. for continuous operation and available for short intervals at a greater load.

**Transformer for Small Model**—Capacity 1.5 K. W. continuously or 3 K. W. for 30 minutes.

**Temperatures**—For the large model a working temperature of over 1600°C. is not recommended although an occasional use at the temperature of melting platinum, 1755°C. is possible. With the Cascade Attachment in the large model a temperature of over 3000°C. is attained throughout a heating space of 15 cc. The small model may be safely operated at temperatures up to 1800°C.

**Use**—These furnaces have been developed by Dr. Northrup for use in his own researches upon the electrical conduction of matter at high temperatures but they have a great variety of application between 1100°C. and 1800°C., avoiding the inconvenience and expense of the vacuum type furnace and where the temperature required makes the use of platinum wound furnaces impossible. No contaminating vapors are given off in these furnaces and their perfect black body temperature makes them admirable for the calibration of optical pyrometers. The small furnace is particularly adapted for melting cylinders or cones of coal ash without the gradual deterioration of the heater unit by vapors given off by the material. The furnaces are well adapted to the fusing of any of the precious metals and to the study of alloys because of the freedom from contamination during the process.

No. 29116  
Small Furnace, Assembled

No. 29116  
Small Furnace Showing All Principal Parts

29100. Furnace, Northrup, High Temperature Electric, Large Model, including graphite-crucible-tube with tongs for convenient handling and one cover piece for Furnace. Without transformer.. 360.00
29104. Special Transformer for Large Model, 4 K.W. capacity for continuous operation. To work on primary line of 110, 120, 220 or 240 volts, as ordered. The secondary voltage is regulated in five steps by tap offs from the primary winding..... 165.00
29108. Cascade Attachment for Large Model, with double-pole double throw switch with two pairs of flexible leads with connectors..... 125.00
29116. Heater Units for Large Model, of standard size and construction and ready for quick connection.. 35.00
29120. Graphite-Crucible-Tube for Large Model, 12 $\frac{1}{2}$  inches long with  $\frac{1}{2}$  inch wall, closed at bottom..... 5.00
29124. Special Tongs, for handling graphite-crucible-tubes..... 1.50
29128. Cylindrical Graphite Weights for Large Model. These fit in the graphite-crucible-tube and are 2 inches high. They are convenient for use in building up load to bring the charge to any desired height from the bottom of the Furnace. Arranged for convenient handling by special tongs listed above..... 1.50
29132. Special Refractory Cylinders for Large Model. These are of the same shape and serve the same purpose as the Graphite Cylinders. They will not shrink or expand or contaminate the charge and have very high insulation..... 4.50
29136. Extra Covers for Large Model, of refractory material with window or sight hole and a stopper to close same when necessary..... 9.00
29140. Replaceable Resistor Units for Cascade Attachment..... 3.00
29144. Graphite-Crucible-Tubes for Cascade Attachment..... 1.50
29146. Furnace, Northrup, High Temperature Electric, Small Model, with one graphite-crucible-tube with tongs for handling, furnace cover piece and one compression carbon rheostat for insertion in the primary for close control of the voltage..... 90.00
29148. Special Transformer for Small Model, 1 $\frac{1}{2}$  K.W. capacity for continuous operation or 3 K.W. for 30 minutes. Primary winding to order for 110, 120, 220 or 240 volts. This transformer is not sold separately and is furnished only with the Small Model Furnace..... 65.00
29152. Heater Unit for Small Model, complete..... 30.00

No. 29156

29156. **Fusel Oil Apparatus, Bromwell**, with stopcock and glass stopper in accordance with the requirements of the U. S. Department of Agriculture, Bureau of Chemistry, Bulletin 107, revised. . . . . 3.50

# GAS ANALYSIS APPARATUS

No. 29160

No. 29168

No. 29176

29160. **Gas Analysis Apparatus, Orsat-Muencke**, for the determination of  $\text{CO}_2$ ,  $\text{CO}$  and  $\text{O}$ , particularly in flue and furnace gases. Consisting of graduated measuring burette with water jacket, aspirator bottle, three absorption pipettes and manifold tube which projects through the upper left-hand side of the case and which is provided with four glass stopcocks. Complete in portable oak case of durable construction. . . . . 25.00
29164. **Manifold** for above with one horizontal and three vertical stopcocks, for three pipettes. . . . . 8.00
29168. **Gas Analysis Apparatus, Orsat-Fischer**. This apparatus differs from the Orsat-Muencke only in the addition of a drying tube inside the case and attached to the manifold, the left-hand end of which turns down to make this connection instead of projecting through the wooden case as in the Orsat-Muencke. For three pipettes. . . . . 25.00
29172. **Manifold** for above. . . . . 8.00
29176. **Gas Analysis Apparatus, Orsat-Lunge**, similar in arrangement and principle to the Orsat-Muencke, but with four pipettes and bent palladium tube with lamp for heating same for separate estimation of hydrogen, and also drying tube on outside of case. Complete in portable oak case. . . . . 34.00
29180. **Manifold** for above, with one horizontal stopcock and four pipette stopcocks. . . . . 10.00
- Note**—The pipettes, measuring burettes, etc., for the three preceding gas analysis apparatus are standard and interchangeable and are carried in stock separately as follows:—
29184. **Measuring Burette** only, without water jacket. . . . . 3.00
29188. **Water Jacket** only, for measuring burette. . . . . .75
29192. **Absorption Pipette**, plain. . . . . 2.00
29196. “ “ filled with glass tubes. . . . . 2.50
29200. “ “ “ “ “ and copper spiral. . . . . 2.50
29208. **Soft Rubber Bag** for attaching to pipette. . . . . .50
29212. **Rubber Bulb**, of black acid-cured rubber with double valve set in bone fittings. . . . . 2.50
29216. **Gas Analysis Apparatus, Orsat-Dennis**. See *Journal of Industrial and Engineering Chemistry*, Vol. 4, No. 12. Complete with measuring burette in water jacket, aspirator bottle, manifold tube with one horizontal stopcock and three pipette stopcocks and the new patent spiral absorption pipettes after Friedrichs. Complete in portable case. . . . . 45.00
29220. **Gas Analysis Apparatus, Orsat-Allen and Moyer**. See “*Transactions of the American Society of Mechanical Engineers*,” Vol. 18, p. 901, and “*Power Plant Testing*,” by J. A. Moyer, Chapter IX, 1911. The distinctive improvement over the preceding forms of Orsat Apparatus is in the substitution of hard rubber capillaries for glass and the new absorption pipettes which are easily removable for the renewing of solutions. . . . . 25.00

No. 29216

No. 29220

No. 29250

29280. Gas Analysis Apparatus, Lomschakow, for flue, generator and mine gases; a new system offering the advantage of great rapidity of operation, quick and complete absorption, economy of reagents and simple and convenient cleaning. See *Chemiker-Zeitung*, Nr. 123, 1913. With three absorption pipettes..... 50.00
29281. Extra Absorption Pipettes, each..... 10.00

No. 29288

No. 29296

29288. Gas Analysis Apparatus, Williams Patent, Model A for complete analysis of combustible gases. For carbon dioxide, illuminants, oxygen, carbon monoxide, hydrogen, methane and nitrogen. Complete in portable oak case..... 50.00
29292. Portable Explosion Coil, with batteries, in quartered oak case..... 5.00
29296. Gas Analysis Apparatus, Williams Patent, Model B for flue gas analysis. With Williams' special bubbling pipettes. For carbon dioxide, oxygen and carbon monoxide..... 35.00

No. 29308

No. 29316

**GAS ANALYSIS APPARATUS, BURRELL, U. S. BUREAU OF MINES TYPE.** This series of Gas Analysis Apparatus is made in accordance with the original drawings furnished us by the Bureau of Mines and is in exact accordance with the specifications and descriptions in Bulletin 42 of the Bureau of Mines, *The Sampling and Examination of Mine Gases and Natural Gas*, Burrell and Seibert. The figure numbers given refer to illustrations in the above Bulletin. Prices on individual glass parts are quoted on application. All connections in explosion pipettes are of No. 27 platinum wire.

29300.	Apparatus for the Determination of Methane in Mine Air, Portable Form, Fig. 13 of Bulletin 42. Complete in wooden case with sliding doors, rubber tubing, clamps, etc.	17.00
29304.	Complete Set of Glass Parts only	8.00
29308.	Apparatus for the Determination of Carbon Dioxide and Methane in Mine Air, Portable Form, Fig. 14 of Bulletin 42. Complete with rubber tubing, clamps, etc., in wooden case with sliding doors.	18.50
29312.	Complete Set of Glass Parts only	9.00
29316.	Apparatus for the Approximate Analysis of Mine Air, Portable Form, Fig. 16 of Bulletin 42. Pipettes are filled with glass tubes not shown in illustration. Complete in wooden case with sliding doors	29.50
29320.	Complete Set of Glass Parts only	17.00

No. 29324

No. 29332

No. 29340

29324.	Apparatus for the Exact Analysis of Mine Air and Flue Gas, Laboratory Form, Fig. 7 of Bulletin 42. Complete with three iron supports, rubber tubing, etc.	35.50
29328.	Complete Set of Glass Parts only	21.50
29332.	Apparatus for the Exact Determination of Methane, Laboratory Form, Fig. 11 of Bulletin. Complete with supports, rubber tubing, clamps, etc.	34.50
29336.	Complete Set of Glass Parts only	20.00

29340. Apparatus for the Exact Determination of Carbon Dioxide and Methane, Laboratory Form, Fig. 15 of Bulletin 42. Complete with iron supports, tubing, etc. 33.50  
 29344. Complete Set of Glass Parts only 19.50

29348. Apparatus for Natural Gas Analysis, Laboratory Form, Fig. 23 of Bulletin. Complete with four iron supports, rubber tubing, clamps, etc. 45.00  
 29352. Complete Set of Glass Parts only 25.50  
 29356. Apparatus for Mixtures containing  $\text{CO}_2$ ,  $\text{C}_2\text{H}_4$ ,  $\text{O}_2$ ,  $\text{CO}$ ,  $\text{H}_2$ ,  $\text{CH}_4$ ,  $\text{C}_2\text{H}_6$  and  $\text{N}_2$ , Laboratory Form, Fig. 17 of Bulletin 42. Complete with four iron supports, tubing, case, etc. 56.00  
 29360. Complete Set of Glass Parts only 35.00  
 29364. Gas Collecting Tube, Haldane, with three-way stopcock at each end, capacity 70 cc. 4.00  
 29368. Gas Absorption Tube, Blount, for moisture and carbon dioxide. See Haldane "Methods of Air Analysis" 3.50

No. 29372

No. 29376

29372. Gas Analysis Apparatus, Haldane, Portable, for general air and gas analysis, especially designed for physiological investigations. See *Journal of Physiology*, Vol. 22, 1898 and Fig. 10, *Haldane "Methods of Air Analysis,"* 1912. Complete in wooden case, with rheostat for controlling the current to the platinum spiral. 45.00  
 29376. Gas Analysis Apparatus, Haldane, for the determination of very small percentages of carbon dioxide in the physiological investigation of air in ordinary rooms, schools, factories, etc. See *Journal of Hygiene*, 1901, p. 103, *First Report of the Departmental Committee on Factory Ventilation*, 1902 and Fig. 11, *Haldane "Methods of Air Analysis,"* 1912. Complete in wooden case. 32.00  
 Official English Certificate for above 10.00

No. 29388

No. 29392

No. 29396

29388. Gas Analysis Apparatus, Petersen-Palmquist Anderson, for the convenient and exact determination of  $\text{CO}_2$  in air. The standard apparatus for investigations of ventilating and other sanitary conditions of schools, factories, etc. Complete in case. . . . . 50.00
29392. Sulphuretted Hydrogen and Ammonia Apparatus, Tutwiler, Standard U. G. I. Form. This apparatus gives direct readings in grains per 100 cu. ft. of gas of  $\text{H}_2\text{S}$  or  $\text{NH}_3$ . It affords a simple and accurate method for determining the efficiency of the condensing, scrubbing and purifying apparatus in gas manufacture. A determination may be made in less than three minutes. In portable case, with chemicals necessary for operation. . . . . 25.00
29396. Apparatus for Determining Hydrogen Sulphide in Gases, Johnson, Patented, a new system offering the advantage that accurate results may be obtained from small samples of gas as compared with the gravimetric method and that the time needed for a test is greatly shortened. . . . . 18.00
29397. Apparatus as above but in case with necessary reagents. . . . . 30.00

No. 29400

No. 29404

29400. Gas Apparatus for the Quantitative Determination of Sulphur and Ammonia, consisting of an ammonia saturator and automatic shut-off meter registering from  $\frac{1}{100}$ th of a cu. ft. to 100 cu. ft. a double dry governor mounted on stand and a London Gas Referee's sulphur determination apparatus, mounted as illustrated. The apparatus conforms to the latest modifications of the Board of London Gas Referees. . . . . 115.00
29404. Sulphur Determination Apparatus, only, as used in above outfit, complete with burner and support. . . . . 15.00

29472.	Gas Washing Bottles, Muencke, with wide mouth. Capacity, cc.....	100	250	500
	Each.....	1.25	1.50	2.00
29480.	Gas Collecting Tube, with bulb in center and two glass stopcocks.....			2.50
29484.	“ “ long form, 125 cc capacity, with two stopcocks.....			2.50
29488.	Case for above, of polished mahogany, with fittings. To hold tubes.....		4	6
	Each.....		6.00	7.00
29492.	Gas Collecting Tube, short form, 125 cc capacity, with two stopcocks.....			2.50
29496.	Mailing Case, with screw cap, for convenient mailing of No. 29492 gas collecting tubes.....			.15
29500.	Gas Collecting Tube, Winkler, 12 inches long by $4\frac{1}{2}$ inches in diam.; of zinc with brass stopcocks.....			3.00

29504.	Gas Burette, Bunte, without water jacket. Graduated to 50 cc in $\frac{1}{10}$ ths, with two stopcocks..	5.00
29508.	“ “ same as No. 29504 but with water jacket.....	5.75
29512.	“ “ Hempel, on weighted wooden bases without stopcocks. Per set.....	5.00
29516.	Gas Burette, Hempel-Winkler, with glass stopcocks, on weighted wooden bases. Per set.....	7.50
29520.	Gas Burette, Hempel, with correction for temperature and pressure, for measurement of gas volumes varying between .5 and 100 cc. With stopcock and levelling bulb, complete as illustrated ..	12.50
29524.	Connecting Tube for gas burettes.....	.15
29528.	Levelling Bulb, on iron stand, convenient for use in gas analysis and other purposes.....	1.50
29532.	Glass Bulb only, for above.....	.75
29536.	Gas Burette, Standard U. G. I. Form, being Tutwiler's modification of Hempel's burette. With manometer, correction tube, water jacket, levelling bulb and heavy metal bases. A special feature of this burette is the four-way stopcock which permits a permanent connection with the potash pipette, thus obviating the necessity of repeatedly connecting and disconnecting the pipette during the course of an analysis.....	25.00

29540. Gas Cylinder, Low Pressure, Empty, of steel, riveted and brazed, tested to 600 lbs. pressure to the square inch; with stopcock and coupling. These cylinders are for sale and are returnable for re-filling but not for credit.  
Size, inches ..... 10 x 32 13 x 44  
Capacity in cubic feet of oxygen at 225 lbs. pressure ..... 25 50  
Each ..... 16.50 22.50
29544. Gas Cylinder, High Pressure, Empty, of seamless steel  $\frac{5}{8}$  inches in diameter by 51 inches high. Each cylinder is tested, numbered and stamped with the wording required by Paragraph 1822A of the Interstate Commerce Commission Regulations, which number is registered in New York with the Chief Inspector of the Bureau for the Safe Transportation of Explosives and other Dangerous Articles. These cylinders are sold outright only and are not returnable for credit. .... 15.00
29548. Gas Cylinder of Carbon Dioxide, consisting of high pressure cylinder No. 29544 filled with 20 lbs. of Carbon Dioxide as used in connection with freezing microtomes and other laboratory purposes. Cylinders are returnable for re-filling only and not for credit. .... 18.00
29552. Gas Cylinder of Oxygen, consisting of high pressure cylinder No. 29544 filled with 70 cubic feet of 99% pure electrolytic Oxygen (under 1800 lbs. at 68°F). Oxygen is absolutely free from the oxides of carbon, hydrocarbons and other deleterious impurities. As used in calorimetry, carbon combustions in steel analysis, etc. Cylinders returned for refilling only not for credit. .... 17.80
29556. Gas Cylinders of Oxygen. These cylinders are filled with the indicated quantities of 97% pure Oxygen (S. S. White Dental Mfg. Co.) at 1000 lbs. pressure. These cylinders are only sold filled with Oxygen but are returnable when empty for either re-filling or credit at the prices indicated.  
Capacity, gallons ..... 40 100  
Each, filled with Oxygen ..... 8.15 17.00  
Cylinders returnable for credit at (charges prepaid) ..... 6.00 12.00
29557. Set of connections, for above cylinders ..... 1.75
29560. Throttle Control Valve, for the safe and accurate delivery of small quantities of gas from cylinders as required in the use of carbon dioxide in connection with freezing microtomes and in the delivery of oxygen in calorimetry and carbon combustions in steel analysis. .... 7.50
29564. Gas Pressure Regulator, for maintaining a constant pressure of oxygen when delivered from pressure cylinders. These regulators will deliver oxygen or other gas uniformly at any desired pressure up to 40 lbs. per square inch. One of the dials shows the pressure at which the oxygen is delivered while the other shows the pressure remaining in the tank. .... 30.00
29568. Iron Support, for high pressure Cylinder No. 29544 ..... 4.00

Note.—We undertake the refilling of Oxygen Cylinders No. 29556 with S. S. White Dental Mfg. Co. Oxygen at their original prices, i.e. 40 gallon cylinders at \$4 per gallon and 100 gallon cylinders at \$4 per gallon. We fill high pressure cylinders with 99% electrolytic Oxygen at \$4 per cubic foot with the addition of all transportation and hauling charges which may be necessary. We also fill high pressure cylinders No. 29544 with 20 lbs. of Carbon Dioxide at \$3.00 per cylinder, with transportation and hauling charges added. Low pressure cylinders are best filled with Oxygen and Illuminating Gas for calcium lights at nearest supply establishment for gases of this character. The usual charge in large cities is \$3.00 for filling 25 gallon cylinders and \$5.00 for filling 50 gallon cylinders with Oxygen, and \$.50 and \$1.00, respectively, for the same cylinders filled with illuminating gas. We undertake such filling as an accommodation for our customers when necessary, but without responsibility on our part.

29372.	Gas Generator, Kipp, improved form, for the continuous production of hydrogen sulphide; with large side opening for filling. Complete with Geissler stopcock, funnel tube, etc.	Capacity, cc.....	250	500	1000	1500	2000	4000
	Each.....		3.50	4.00	5.00	6.00	7.00	9.00
29376.	Rubber Rings, for use in the above generator to prevent the iron sulphide from falling into the lower chamber.	To fit generator, cc.....	250	500	1000	1500	2000	
	Each.....		.30	.35	.45	.50	.60	
29580.	Gas Generator, McCoy. A steady gas pressure is maintained by delivering the acid in drops.	Capacity, cc.....				1000	2000	
	Each.....					8.00	10.00	
29384.	Gasoline Gas Generator, for operating one Bunsen burner or one blast burner in laboratories without gas supply. Must be used in connection with a foot blower or other form of blast apparatus. Dimensions $4\frac{1}{2}$ inches diameter by 7 inches high and contains 14 lineal feet of evaporating surface.							9.00
29588.	Gas Holders, Berzelius-Pepys's improved form, of heavy copper, with glass gauge.	Capacity, liters.....				20	40	
	Each.....					20.00	25.00	
29592.	Gas Holder, Berzelius, entirely of glass with ground fittings; capacity 8 liters.							16.00
29596.	Gas Generator, Tirrill, for generating gasoline gas for use in laboratories. This machine accomplishes the mixing outside and is permitted by all fire underwriters without extra cost. The gas delivered gives a white, absolutely smokeless flame without odor. It is composed of a generator placed in the ground 30 ft. from the building and buried 6 ft. under ground, a mixer placed near the generator 3 ft. under ground and an air pump placed in the cellar of the building. The machine can be operated by either weight or water. The above illustration shows the machine operated by weight. Any plumber or gas fitter can set the same up with the directions supplied.	Number of burners.....	15	25	50	75	100	
	Each.....		210.00	250.00	210.00	410.00	525.00	
29600.	Gas Measuring Tubes, of glass, graduated, closed at one end, without stopcock.	Capacity.....	25 cc in $\frac{1}{16}$ ths		50 cc in $\frac{1}{16}$ ths		100 cc in $\frac{1}{16}$ ths	
	Each.....		.65		1.00		1.50	
29604.	Gas Measuring Tubes, same as No. 29600 but with stopcock.	Capacity.....	25 cc in $\frac{1}{16}$ ths		50 cc in $\frac{1}{16}$ ths			
	Each.....		1.50		2.00			
29608.	Gas Palladium Tube, Hempel, for the absorption of hydrogen, with about 2 grams of palladium sponge.							5.00

29628. Gas Filter, for use with either the Greenman or the Roux Bimetallic Thermo-regulators, to clean the gas of coal tar or other impurities, thereby securing more satisfactory working of the regulators... 5.00  
 29632. Gas Filter Tube, with projections to support paper thimble and ground in connecting tube. The upper connecting tube is 1 inch in diameter; without thimble... 2.00  
 29636. Gas Generator, "Autogenerator," for generating oxygen, automatically producing an absolutely pure oxygen from oxone at any desired pressure up to 50 lbs... 45.00  
 29640. Oxone Cartridges, in tins each containing six round tablets, sufficient for 4½ cu. ft. of oxygen, for use in above. Per cartridge... 1.35  
 29644. Gas Generator, on stand with three flame Bunsen burner, 50 cm long... 12.00

No. 29648

29648. Gas Generator, Electrolytic Oxygen and Hydrogen. By means of pure nickel electrodes and the use of 30% caustic soda solution as electrolyte, pure oxygen and hydrogen are generated in turn by reversing the poles of the battery. The oxygen is very pure, being particularly free from ozone. Height 7 cm by 15 cm in diameter. See *Zeitschrift für den physikalischen und chemischen Unterricht* (Poske) XXV.I. p. 69.

29760.	Glass Parts only for No. 29756.....	3.00
29764.	Gas Pipette, Hempel, with glass beads for ethylene absorption.....	3.50
29768.	Glass Parts only for No. 29764.....	2.00

No. 29772

No. 29780

No. 29788

29772.	Gas Pipette, Hempel, simple explosion, with stopcock and platinum electrodes.....	6.00
29776.	Glass Parts only for No. 29772.....	3.50
29780.	Gas Pipette, Hempel, explosion, with platinum electrodes, stopcock and levelling bulb.....	7.00
29784.	Glass Parts only for No. 29780.....	4.25
29788.	Gas Pipette, Hempel, with platinum spiral, for methane, mounted on new iron stand.....	6.00

29792.	Gauge, Pressure, in brass case, reading in pounds. Suitable for steam, water or air pressure but when used with steam pressure must always be connected with syphon. May be graduated to any pressure not exceeding 500 lbs. Range must be specified in ordering. The 3 inch gauge connects on $\frac{1}{4}$ inch pipe thread and 5 inch gauge connects on $\frac{1}{2}$ inch pipe thread.			
	Diameter, inches.....	3	5	
	Each.....	5.00	7.50	
29796.	Gauge, Vacuum, reading in inches to 30 inches of mercury. Otherwise similar to No. 29792. Dial 3 inches in diameter.....			
			5.00	
29800.	Gauge, Vacuum and Pressure, both on same dial, vacuum scale for 0 to 30 inches of mercury, pressure scale from 0 to 15, 30 or 60 lbs. Range must be specified in ordering. Exactly the same in construction as Nos. 29792 and 29796.....			
			14.00	
29804.	Gauges, Wire, American Standard, B & S, of best tempered steel.			
	Size.....	0 to 36	5 to 36	
	Each.....	2.50	2.00	
29808.	Glass Beads, solid, 3 to 6 mm in diameter. Per lb.....			
			.90	
29812.	" " hollow, 5 to 6 mm long by 4 to 5 mm in diameter. Per lb.....			
			.70	
29816.	Glass Cutter, Diamond. Price depends upon quality of splint and varies from \$5.00 to \$20.00.			
29820.	" " with small steel wheel.....			
			.20	
29824.	" Tubing Cutter. Large size will cut tubing of $\frac{1}{2}$ to 1 inch in diameter in lengths up to 8 inches; small size will cut tubing $\frac{1}{4}$ inch diameter in lengths up to 5 inches.			
	Size.....	Small	Large	
	Each.....	1.50	1.50	
29825.	Extra cutter wheels. Per dozen.....			
			2.00	
29828.	Glass Tubing Cutter, Griffin's form.			
	For tubes, mm in diameter.....	17	30	
	Each.....	1.00	2.00	
29832.	Glass Cutter, consisting of a hardened, sharpened steel knife with wooden handle. A most convenient and satisfactory laboratory utensil.....			
			1.00	
29836.	Glass Tubing Gauge, of steel, very convenient for rapidly sorting glass or metal tubing by outside diameters. The slots vary in width by $\frac{1}{4}$ mm. These gauges come in three sizes, the size measuring from 5 to 11 mm being shown in the illustration.			
	Size, mm.....	1 to 5	5 to 11	11 to 16
	Each.....	1.00	1.25	1.50
29840.	Glass Tubing, heavy walled for sealing, so-called "Einschmelz" tubing			
	Length, mm.....	500	600	700
	Diameter, mm.....	18	20	22
	Each.....	.40	.45	.50

No. 29844

No. 29848

29844. Glass Blower's Table, consisting of an iron covered table top 75 x 75 cm, supported over a cylindrical foot bellows. Very convenient in the laboratory for glass-blowing as the blast lamp may be left permanently in place on the table without blast lamp or burner.  
 Duty Free..... 17.50      Duty Paid..... 22.00
29848. Glass-blower's Table, Thüringian model, with single and double blast burners, as shown in illustration, permitting the use of flame of all kinds as used in ordinary laboratory glass blowing. The use of this outfit makes laboratory glass blowing far easier of accomplishment than is possible with the use of ordinary blast lamp and foot blower.  
 Duty Free..... 23.25      Duty Paid..... 27.85
29852. Glass-blower's Table, as above without burners.  
 Duty Free..... 13.80      Duty Paid..... 16.50

View in Stock Room Showing Adjustable Partitions on Right and Glass Tubing on Left

**GLASS TUBING AND ROD** is carried in stock in the original factory lengths of from 1½ to 2 meters. Customers are requested to state the length to which pieces may be cut for shipment. On small orders, particularly where factory length is not required, an extra charge is made for the special box required to insure safe transit. The following prices are based on tubing with usual factory variations as to bore, thickness of wall, etc. Where tubing must be selected to an exact measurement as to inside and outside diameter, an extra charge is made. **Specifications as to diameter of glass tubing are always taken to be outside diameter unless otherwise stated, except in the case of combustion tubing where it is customary to specify inside diameter in order to make sure same will take proper size combustion boat.**

29856.	Glass Rod, for easy manipulation before the lamp. From 1 to 25 mm diameter. Per lb.....	.40
29860.	Glass Stirrers, with one end rounded and the other end pointed.	
	Length, inches.....	4 5 6 8 10 12 15
	Diameter, inches.....	$\frac{1}{8}$ $\frac{3}{8}$ $\frac{1}{2}$ $\frac{3}{4}$ $\frac{1}{2}$ $\frac{5}{8}$ $\frac{3}{4}$
	Per dozen.....	.20 .25 .30 .40 .60 1.00 1.15
29864.	Glass Bending Tubing, Best Imported. Particularly recommended for laboratory use because of the ease with which it can be manipulated before the lamp. Not to be confused with low priced, thin walled "trial" tubing of either German or American make.	
	Outside diameter, mm.....	1 to 4 5 to 20 21 to 35 36 to 50
	Per lb.....	.45 .40 .50 .60
29868.	Glass Tubing, Barometer, in three outside diameters, i. e., 6, 8 and 10 mm. Per lb.....	.70
29872.	Glass Tubing, Capillary, with very small outside diameters, i. e., approximately 2, 3, 4 and 5 mm. The 2 mm tubing has a capillary fine enough to be designated as thermometer tubing. The tubing of 3, 4 and 5 mm outside diameter has a bore of about 1 mm and differs from barometer tubing only in the outside diameter. Per lb.....	1.00
29876.	Glass Tubing Combustion, Kavalier Hard Bohemian. Dimensions given are inside dimensions in order to determine size suitable for various combustion boats.	
	Inside diameter, mm.....	3 to 5 6 to 25 9-25
	Per lb.....	1.10 1.00
29880.	Glass Tubing, Jena, Combustion, containing very little alkali. Very tractable in the blowpipe flame although as hard to fuse as the hardest Bohemian. Inside diameter, mm.....	3 to 5 6 to 25
	Per lb.....	1.00 .75
29884.	Glass Tubing, Jena Apparatus Glass, adapted for work before the lamp in the manufacture of apparatus. Outside diameter 5 to 25 mm. Per lb.....	1.00
29888.	Glass Tubing, Jena Compound Robax Glass (registered trade-mark a light blue longitudinal line) for explosion furnaces, etc. Of great resistance to sudden temperature change, the action of water, acid or alkali solutions, etc. Outside diameter 12 to 25 mm. Per lb.....	.75
29892.	Glass Tubing, Jena Uriol Glass, of high transparency to ultra-violet rays and very thin wall. Imported to order only. Duty Free, per kilo.....	3.50
	Duty Paid, per kilo.....	7.00
29896.	Glass Tubing, Jena 397III Glass, adapted for the enclosure of platinum wire, so-called fusing-in glass. Outside diameter 5 to 12 mm. Per kilo.....	1.00
29900.	Glass Tubing, Jena Fiolax Glass, made especially for the manufacture of ampoules and other containers for sterilized solutions. Very resistant to alkalis under sterilization and at the same time easy to manipulate before the lamp. Trade-mark for white tubing a red line and for amber a white line. A very valuable tubing for laboratory work because of its resistance to alkalis. Outside diameter 10 to 18 mm. Per kilo.....	2.50
29904.	Glass Tubing, Thermometer, Jena 16III Glass, of great resistance power, almost entirely eliminating the periodical changes of the zero point. Registered trade-mark red longitudinal line with white background. About 5 to 6 mm outside diameter. Per lb.....	1.75
29908.	Glass Tubing, Thermometer, Jena Borosilicate 39III Glass, with white background with lowest possible temperature coefficient, i. e., 1° C. = .0000177. For the manufacture of thermometers to measure high temperatures, i. e., up to 500° C. About 5 to 6 mm outside diameter. Per lb.....	2.75

29904. Glass Tubing, Thermometer, Thüringian make, with white background. About 5 to 6 mm outside diameter. Per lb. 1.00
29908. Glass Wool, of best Bohemian spun glass. In original cartons.  
Quality..... A (wavy, coarse spun) FF (wavy, fine spun) B (smooth, free from lead)

29956. **Grain Germinator, Schönjahn**, with thermometer; as used in determining the germinating power of barley, etc., in malting. For 100 grains..... 4.00
29960. **Grain Tester, Grobecker**, of brass, for sectioning 50 grains..... 6.00

### APPARATUS FOR HAEMATOTOLOGY

Diagrams Showing the most used Haemacytometer Rulings

Thoma Ruling

Neubauer Ruling

Zappert Ruling

Breuer Ruling

Fuchs and Rosenthal Ruling

Türk Ruling

### Bürker No. 1 Ruling

No. 30000

No. 30088

**HAEMACYTOMETERS, ZEISS.** We particularly emphasize the advantage of using the original Zeiss make of Thoma Haemocytometers and all modifications thereof; our experience having shown that the cheaper makes are inferior and never satisfactory as to accuracy. Our stock of Haemocytometers, with the exception of the Hayem-Sahli and the Thoma-Metz, is confined entirely to the Zeiss product. The counting chambers when sold separately are supplied without leather case but with one each thick and thin cover glasses. They are all of 1 mm depth, excepting the Helber and Fuchs-Rosenthal. The various rulings are shown in illustrations on preceding page.

30000.	Counting Chamber, Thoma	ruling, with two cover glasses but without case.....	4.50
30004.	" "	Zappert " " " " " " " " " " " .....	4.70
30008.	" "	Türk " " " " " " " " " " " .....	6.30
30012.	" "	Breuer " " " " " " " " " " " .....	5.60
30016.	" "	Bürker No. 1 ruling. The chamber is provided with two counting surfaces separated by a cross channel so that two countings can be done one shortly after the other. The rectangular cover glass is placed in position before introducing the blood mixture, the drops are placed upon the semicircular prominence of the middle plate and flow from thence by capillary attraction upon the counting surfaces. With cross lines divided on both counting surfaces.....	7.40
30020.	Counting Chamber, Bürker No. 1	ruling, but with spring clamps to hold cover glass in position.....	11.00
30024.	Counting Chamber, Bürker No. 2,	the counting surfaces of which are not provided with cross line divisions. Counting is done by means of special ocular diaphragms; the value of the square aperture of these diaphragms can be estimated by the stage micrometer (1 mm divided into 100 parts) cemented alongside the counting chamber. With three ocular diaphragms.....	8.85
30028.	Counting Chamber, Bürker No. 2	ruling but with spring clamps to hold cover glass in position.....	11.70
30032.	Counting Chamber, Special,	with two counting surfaces as in the Bürker No. 1 but with the surfaces ruled with the Neubauer ruling. As made specially for us by Zeiss and as used in the Clinical Laboratory at Johns Hopkins University Medical School.....	11.70
30036.	Counting Chamber, Helber,	for counting blood platelets, yeast cells, bacteria, etc. With Thoma ruling but with counting cell 0.02 mm in depth instead of 0.1 mm.....	4.85
30040.	Counting Chamber, Fuchs and Rosenthal,	for cytological investigations of the cerebro-spinal fluids, with counting chamber 0.2 mm deep.....	4.70
30044.	Leather Cases, of morocco, velvet lined,	for any of the above counting chambers.....	.55
30048.	Cover Glasses,	for above counting chambers, square 4 mm thick.....	.20
30056.	" " " " Bürker counting chambers,	rectangular, 0.3 mm thick.....	.25
30060.	" " " " " " " " " " " "	0.5 mm ".....	.25
30064.	Mixing Pipette, Thoma,	for red corpuscles, diluting 1 to 100; with rubber tube and mouth piece.....	1.80
30068.	" " " " " " " " " " " "	for white corpuscles, diluting 1 to 10; with rubber tube and mouth piece.....	1.80
30072.	" " " " Rieder,	for diluting 1 to 20; with rubber tube and mouth piece.....	2.90
30076.	" " " " Miescher,	for diluting 1 to 100, 1 to 150 and 1 to 200; with rubber tube and mouth piece.....	4.30
30080.	" " " " " " " " " " " "	for diluting 1 to 200, 1 to 300 and 1 to 400, with rubber tube and mouth piece.....	4.30
30084.	Fluid Chamber, Bürker,	for use on Bürker's counting chambers.....	.75

No. 30156

No. 30160

No. 30176

30144. Ocular, Ehrlich, with adjustable square diaphragm for use in blood counting, cytology, etc. . . . . 11.40
30148. Haemocytometer, Thoma-Metz, consisting of a counting ocular, counting slide, plano cover glass, pipette for red corpuscles and pipette for white corpuscles. The usual graduations on the counting chamber are omitted and are provided in the ocular which is adjusted for use with a 4 mm objective. Small variations in the focus of the objective may be compensated for by adjustment of tube length. This adjustment is controlled by the coincidence of the counting plate with a square engraved on the slide. In case . . . . . 16.00
30152. Haemaglobinometer, Dare, complete in leather case. . . . . 22.50
30156. Haemaglobin Scale, Tallquist. A color scale of ten tints, ranging from 10% to 100%, bound in book form, pocket size, complete with 50 sheets of standard filter paper sufficient for 150 tests, and directions for use. . . . . 1.50
30160. Haemometer, Sahlb, original Swiss make being constructed under Dr. Sahlb's personal supervision and not to be confused with the many unsatisfactory imitations at a lower price. Complete with directions for use . . . . . 7.50
30164. Standard Colored Tubes for above, each . . . . . 1.25
30168. Graduated Tubes for above. . . . . 1.25
30172. Graduated Pipette for above . . . . . 1.25
30176. Haemometer, Fleischl, for measuring the percentage of haemoglobin in blood. The standard of comparison in this instrument is a tinted wedge of glass mounted movably beneath the stage. Only a small quantity of blood is required and the results are obtained easily and quickly. Complete in case with lock and handle. . . . . 24.00

No. 30180

No. 30196

30180. Haemometer, Fleischl-Miescher, for estimating the absolute as well as the relative percentage of haemoglobin content of blood with great accuracy. Complete with cells, mixing pipette, etc. 45.00
30184. Capillary Tubes for Fleischl Haemometers of varying capacities to suit wedge of instrument. Capacity in cubic millimeters. Each. .30
30188. Yellow glass disc, for use with Fleischl haemometers in day light. Each. 1.75
30192. Coagulometer, Biffi-Brooks. Complete with thermometer. 8.00
30196. Coagulometer, Brodie-Russell-Boggs, for use on the stage of the microscope. See *Johns Hopkins Hospital Bulletin*, June-July, 1907. 9.00
30200. Coagulometer, Schultz, consisting of small glass tubes each with 14 bulbs, which may be broken off readily with the fingers for introduction into the normal salt solution. A simple and convenient method for determining coagulation time of blood. See *Berliner klin. Wochenschr.*, 1910, No. 12. Each. .20

No. 30204

No. 30224

30204. Apparatus for the Determination of Urea in the Blood, Marshall. Complete outfit as shown in the illustration consists of two calcium chloride tubes, two Erlenmeyer flasks, two cylinders, one gas washing bottle, two rubber stoppers to fit cylinders, one Chapman filter pump, three special Folin tubes with perforations in bulb, three glass bulb connecting tubes, tubes for connecting flasks and tubes to reach to the bottom of the cylinders with necessary hose, etc. See *Journal of Biological Chemistry*, Vol. XV, No. 3, September, 1913. Complete outfit. 7.00
30208. Folin Tube with perforated bulb, for above, each. .15
30212. Bulb Connecting Tube, for above, each. .30
30216. Connecting Tubes, short, for connecting flasks, for above, each. .10
30220. " " long, to reach bottom of cylinders, for above, each. .10
30224. Stalagmometer, Traube, for determining the surface tension of fluids by the number of drops formed by a given volume in a given time and as used for the small drop reaction in the diagnosis of typhoid vaccines and other studies in immunity. See *Biochem. z. März*, 1910, *Münch. med. W.* 5762, 1910 and *Journal of the American Medical Association*, May 28, 1910. Complete outfit consisting of three accurately calibrated glass tubes one each for small quantities of thin liquids, large quantities of thin liquids, and one specially for blood and other more viscous solutions. 16.00
30228. Stalagmometer Tubes, as above, if ordered singly, each. 7.50

30272. Hardness Tester (Scleroscope), for measuring the hardness of metals. A miniature trip hammer is dropped from a fixed height upon the surface of the metal the hardness of which is to be tested. The height of the rebound of this hammer depends on the hardness or amount of resistance to penetration offered by the metal, and is measured by the Scleroscope scale. In addition to the Scleroscope proper the outfit consists of one plaster-mount vessel, one nicked and enameled swing arm and stand, one magnifier, hammer for soft metals only, one brass and one hard steel standard reference bars, 50 blank curve charts, all in polished hardwood carrying case. 150.00
30276. Hardness Tester, Keen, a simple portable instrument for testing the hardness of metals, the readings of which may be easily converted into approximately the Brinnell hardness numerals. A standard weight drops from a standard height, delivering a blow of constant magnitude on a socket in which is mounted a hardened steel ball. The indication on the piece to be tested is measured with a small celluloid gauge graduated to  $\frac{1}{16}$  mm or with a microscope. The instrument weighs only 6½ lbs., is thoroughly portable and is finished with highly polished nickel plate. Complete with three extra hardened steel balls and measuring scale. 18.00

No. 30296—With top removed, showing replaceable heating units

**30280. Hardness Tester, Brinell**, for use in making Brinell's ball impression test or Ludwik's test by conical impressions. This method is standard throughout the world and gives numerical values of the hardness of materials without elaborate preparation, and insofar as iron and steel are concerned, the tensile strength as well. Some of the applications of this instrument are as follows:—

Rapid control of chemical carbon determinations during iron and steel smelting.

Testing finished articles without damaging the same, say rails, tires, projectiles, armor plates, gun barrels of all kinds, structural steel, etc.

Examining the nature of the material in entire or broken parts of machinery, where the making of a tensile test bar is impossible.

Testing the degree of hardness and softness obtainable by thermal treatment of any steel.

Testing uniformity of temper.

Ascertaining the effect of the nature and temperature of various hardening fluids.

Studying the effect of cold working, etc., etc.

For a maximum pressure of 3000 kilograms.

Duty Free..... 210.00

Duty Paid..... 250.00

**30284. Hardness Tester, Brinell**, as above, for a maximum pressure of 5000 kilograms.

Duty Free..... 235.00

Duty Paid..... 280.00

**30288. Hot Plates**, for gas, with extra heavy polished steel top.

No. 30308

- 30300. Hot Plate, Hoskins Electric**, with heating elements of nickel-chromium. With 500 watts gives a maximum temperature of 483° C. With pressed steel top 6 inches in diameter. Works equally well on alternating or direct current but voltage must be specified in ordering. Furnished with six feet of flexible cord and plug. Requires use of 5 ampere snap or knife switch. . . . . 6.00
- 30304. Hot Plate, Hoskins Electric**, with polished sheet steel top and cast iron legs. Spiral resistance unit covers circular area 5½ inches in diameter in center of top, 12 inches square. Gives maximum temperature with 500 watts of 260° C. at center and 121° C. at edge. Works equally well on direct or alternating current but voltage must be specified in ordering. Furnished with 6 ft. of flexible cord and plug. Requires 5 ampere snap or knife switch for operation. . . . . 8.00
- 30308. Hot Plate, Hoskins Electric, Three Heat**, with polished sheet steel top 12 x 18 inches, with square steel legs. Resistance unit composed of three parallel windings, each controlled by a snap switch on front of plate. Heat distribution is absolutely uniform. At "Low" heat with 600 watts gives 177° C., "Medium" with 1200 watts gives 232° C. and "High" with 1800 watts gives 288° C. Works equally well on direct or alternating current but voltage must be specified in ordering. Requires use of a double pole knife switch 20 amperes capacity on 110 volts, and 10 amperes on 220 volts. . . . . 25.00

Nos. 30316 and 30320

Nos. 30321 and 30328

No. 30332

- 30312. Hot Plate, Electric, Three Heat**. Furnished with regulating switch, 5 ft. of flexible cord and snap switch. Gives maximum temperature of 315° C. when running idle. Of polished steel. Operates equally well on direct or alternating current but voltage must be specified in ordering.

- 30316. Hot Plates, Electric, Three Heat**, circular form, of polished steel with slate base, with regulating switch. All are furnished with 6 ft. of flexible cord and the 4½ and 6 inch sizes with a lamp socket plug. No socket plug is furnished with the 8 inch size but a plug switch is furnished with the 10 inch. Operate equally well on direct or alternating current but voltage must be specified in ordering. Maximum surface temperature on "High" heat when running idle about 340° C. For arrangement to use these heaters in connection with Extraction Apparatus, No. 27504.
- |                       |      |      |       |       |

- 30320. Hot Plate, Electric**, circular form, for single heat, with 6 ft. of cord and lamp socket plug but without regulating switch. Diameter, 4½ inches. Of polished steel on slate base. Gives surface temperature when running idle on 250 watts of about 340° C. Operates equally well on direct or alternating current but voltage must be specified in ordering. . . . . 4.00
- 30324. Hot Plates, Electric**, rectangular form, for one heat. Of polished cast iron. Furnished with 4 ft. of cord but no plug. Will reach about 340° C. when running idle. Operate equally well on direct or alternating current but voltage must be specified in ordering.
- |                     |       |       |

**HOT PLATES, HERAEUS' PATENT, WITH AUTOMATIC TEMPERATURE REGULATION.** These plates are of aluminum with heating element of sheet Nichrome and reach a maximum temperature of 250°C. A micrometer screw is set to any temperature desired below the maximum, after which the plate will maintain the desired temperature to within 1° without attention, all of which is accomplished without the use of rheostats. The plates are listed below both without regulator and with regulator for both alternating and direct circuits. As the heating element is contained in an air box 2 inches deep the hot plate proper can be removed and replaced with a plate with aluminum rings at extra price.

- 30344. Hot Plate with Flask Heater, Electric, Multiple Unit Type.** A practical combination of hot plate, flask heater and sand bath. The hot plate is removable and either the sand bath or flask heater may be inserted in its place immediately over the heating units. Attains a maximum temperature of 540° C which may be reduced sufficiently low for ether or alcohol extractions. The unit is replaceable by the operator. Complete with connecting cord and plug for either 110 or 220 volt lines. Voltage must be specified in ordering. . . . . 25.00
- 30346. Extra Units,** for either voltage. . . . . 3.00
- 30348. Rewinding Units** at factory, each. . . . . 1.25

## HYDROMETERS.

All our Baume scale Hydrometers are graduated in accordance with the American Standard scale, i. e.,  
 $B^{\circ} = \frac{60^{\circ} F. - 135}{145 - S. G.}$  for liquids heavier than water and  $S. G. = 150 + B^{\circ}$  for liquids lighter than water.

- 30352. Hydrometers, Specific Gravity,** for liquids lighter than water; ranges 0.700-0.800, 0.800-0.900, 0.900-1.000 and 0.700-1.000. Each. . . . . 1.00
- 30356. Hydrometers, Specific Gravity,** for liquids heavier than water; ranges 1.000-1.200, 1.200-1.400, 1.400-1.600, 1.600-1.800, 1.800-2.000, 1.000-1.500, and 1.000-2.000. Each. . . . . 1.00
- 30360. Hydrometer, Specific Gravity, Patent,** for both light and heavy liquids in either small or large quantities, as well as for solids. Provided with three scales on the one stem. Fig. 2 shows the paper scale laid out flat, before being placed in the stem of the hydrometer. One scale is graduated from 0.700 to 1.000 for light liquids in bulk, the second is graduated from 1.000 to 1.400 for heavy liquids in bulk, and the third is graduated in grams and  $\frac{1}{10}$  grams, serving as a balance, for determining the specific gravity of light or heavy liquids and solids, which are placed in the small graduated stoppered bulb of the instrument. Complete in tin carrying case. . . . . 4.00
- 30364. Hydrometers, Specific Gravity and Baume,** for liquids lighter than water; ranges 0.700-1.000 and 70-10; 0.700-0.850 and 70-34; 0.850-1.000 and 34-10; 0.700-0.800 and 70-44; 0.800-0.900 and 44-25; 0.900-1.000 and 25-10. Each. . . . . 1.25
- 30368. Hydrometers, Specific Gravity and Baume,** for liquids lighter than water, with thermometer in stem; ranges 0.700 to 1.000 and 70-10. Each. . . . . 2.25
- 30372. Hydrometers, Specific Gravity and Baume,** for liquids heavier than water; ranges 1.000-2.000 and 0-70; 1.000-1.400 and 0-41; 1.400-2.000 and 41-70; 1.000 to 1.200 and 0-24; 1.200-1.400 and 24-41; 1.400-1.600 and 41-54; 1.600-1.800 and 54-64; 1.800-2.000 and 64-70. Each. . . . . 1.25
- 30376. Hydrometer, Specific Gravity and Baume** for liquids heavier than water, with thermometer combined; 1.000-2.000 and 0-70. Each. . . . . 2.25
- 30380. Hydrometer, Universal, Baume and Specific Gravity,** for both heavy and light liquids. Baume ranges from 0 to 70 and 10 to 100° in single degrees, specific gravity from 0.700 to 1.900. Each. . . . . 1.75
- 30384. Hydrometers, Baume,** for liquids lighter than water; ranges 20-10°, 30-20°, 40-30°, 50-40°, 60-50°, 70-60°, 80-70°, and 90-80°; divided in  $\frac{1}{10}$ °. Each. . . . . 1.00
- 30388. Hydrometers, Baume,** for liquids heavier than water; ranges 0-10°, 10-20°, 20-30°, 30-40°, 40-50°, 50-60° and 60-70°; divided in  $\frac{1}{10}$ °. Each. . . . . 1.00
- 30392. Hydrometers, Baume,** for liquids heavier than water; 0-50° and 0-70°; divided in single degrees. Each. . . . . .50
- 30396. Hydrometer, Twaddle,** for liquids heavier than water (Twaddle degrees multiplied by 5 and added to 1000=specific gravity); about 12 inches long. Ranges No. 0, 0-10; No. 1, 0-24; No. 2, 24-48; No. 3, 48-72; No. 4, 72-102; No. 5, 102-134 and No. 6, 134-160. Each. . . . . .75
- 30400. Hydrometer, Twaddle,** same construction and scales as No. 30396 but small size, i. e., about 6 inches long. Each. . . . . 1.00
- 30404. Hydrometer, Brix,** ranges 0-30°, 30-60° and 60-90° graduated in  $\frac{1}{2}$ °. Each. . . . . 1.00
- 30408. " " " " " "** of Jena glass; ranges 0-15°, 15-30°, 30-45°, 45-60°, 60-75°, and 75-90°; graduated in  $\frac{1}{10}$ °. Each. . . . . 1.25
- 30412. Hydrometer, Brix,** of Jena glass, range 20-25°, graduated in  $\frac{1}{10}$ °, with enclosed Centigrade thermometer of Jena glass. Each. . . . . 3.00
- 30416. Hydrometer, Brix,** of German silver throughout, ranges 0-30°, 30-60°, and 60-90°; graduated in  $\frac{1}{2}$ °. Each. . . . . 4.50
- 30420. Hydrometers, Specific Gravity, Precision,** of Jena 16 III glass, reading to between the third and fourth decimal place from 0.700 to 1.950. Each hydrometer 350 mm long; ranges 0.700-0.760, 0.760-0.820, 0.820-0.880, 0.880-0.940, 0.940-1.000, 1.000-1.060, 1.060-1.120, 1.120-1.180, 1.180-1.240, 1.240-1.300, 1.300-1.360, 1.360-1.420, 1.420-1.480, 1.480-1.540, 1.540-1.600, 1.600-1.660, 1.660-1.720, 1.720-1.780, 1.780-1.840 and 1.840-1.950. Each. . . . . 2.50
- 30424. Hydrometer, Specific Gravity,** complete set of above (No. 30420) consisting of 20 hydrometer spindles and one indicating thermometer spindle with which to determine the correct hydrometer to use in a given solution. . . . . 50.00
- 30428. Hydrometers, Specific Gravity,** complete set as in No. 30424 but certified to four points and with certificate of the Physikalisch-Technische Reichsanstalt. In wooden case. . . . . 70.00
- 30432. Hydrometers, Precision,** exactly same as No. 30424 and same ranges, but 15 cm long, for small quantities of fluids. Each. . . . . 1.75
- 30436. Hydrometers, Precision,** complete set of No. 30432. In wooden case. . . . . 35.00
- 30440. " " " " " "** certified to four points and with certificate of the Physikalisch-Technische Reichsanstalt. In wooden case. . . . . 55.00

30444. **Hydrometers, Precision**, reading in specific gravity to the third decimal place. Set of six, 0.700-0.850, 0.850-1.000, 1.000-1.250, 1.250-1.500, 1.500-1.750 and 1.750-2.000. With separate thermometer in case. Spindles are not sold separately. In wooden case..... 15.00
30448. **Hydrometers, Precision**, complete set as in No. 30444 but with certificate of the Physikalisch-Technische Reichsanstalt. In wooden case..... 21.00
30452. **Hydrometer, Baume**, of German Silver, for liquids heavier than water, scale 0-50° in 1°..... 4.50
30456. **Hydrometer, Alcohol, Gay-Lussac**, scale from 1°-100° in single degrees..... 1.00
30460. " **Tralle and Proof Scales** reading from 100° below to 100° above Proof and from 1° to 100° Tralle in single degrees..... 1.00
30464. **Hydrometer, Alcohol, Tralle and Proof Scales** as in No. 30460 and also with enclosed thermometer. U. S. Custom House standard pattern..... 2.00
30468. **Hydrometers, Alcohol, U. S. Internal Revenue Bureau Pattern**, covering the entire range of spiritous liquors. No. 1, 0-100°; No. 2, 80-120°; No. 3, 100-140°; No. 4, 130-170°; No. 5, 160-200°. Each..... 2.50
30472. **Hydrometers, Alcohol, Complete Set**, as above, in polished wooden case with leather lining, including one copper spirit can with standard thermometer..... 24.00
30476. **Hydrometers, Alcohol, Plate**, Set of three hydrometers 9 cm in length, for testing alcohol in museum jars and biological work without the inconvenience of pouring off a sufficient quantity to float the usual large hydrometer. Reading from 30 to 100% volume and tested in the Zeiss laboratories. In handsome case..... 5.00
30480. **Hydrometer, Ammonia**, 35-10° Baume scale in  $\frac{1}{2}$  divisions..... .75
30484. " **Sommer's Patent**, for determining the specific gravity of Asphalt, graduated from 0.85 to 1.3° at 25° C., as recommended by the Committee of the American Society of Civil Engineers. Complete with brass receptacle and fittings, with instructions for use..... 10.00
30488. **Hydrometer**, same as No. 30484, but graduated from 0.950 to 1.100°..... 10.00
30492. " **(Barkometer)** for tanning liquids reading from 0-60° Baume in single degrees..... 1.00
30496. **Hydrometer**, same as above but with thermometer and correction scale..... 2.50
30500. **Hydrometer (Barkometer)** reading from 0 to 60° Baume in single degrees with Fahrenheit thermometer to 90°, scale about 5 inches long..... 2.00
30504. **Hydrometer, Benzene**, also for coal oil, gasoline, naphtha, etc., scale 90-60° Baume reading in single degrees. Each..... 2.75
30508. **Hydrometer Ether**, reading from 0.75 to 0.700 Specific Gravity, with enclosed thermometer..... 2.75
30512. **Hydrometer Glue**, graduated from 0-12° in 1°..... 1.25
30516. **Hydrometer, Lime-sulphur**, for use in determining the degree of density of lime-sulphur solutions, as recommended by Parrott and Stewart; scale is from 0 to 38° Baume and from 1.000 to 1.350 specific gravity, without cylinder..... .75
30520. **Hydrometer**, as above, with special cylinder..... 1.00
30524. **Special Cylinder** only..... .40
30528. **Hydrometer, (Salinometer)** with direct reading in percentage of salt content, range from 1 to 100% in  $\frac{1}{4}$  divisions..... .75
30532. **Hydrometer, Storage Battery**, with specific gravity scale, with range 1.100 to 1.300 and 7 inches in length. Each..... .75
30536. **Hydrometer, Storage Battery**, with syringe. The pointed tube of the syringe is inserted in the storage cell opening and the electrolyte withdrawn by means of the bulb. The specific gravity is then read by the hydrometer floating in the cylinder of the syringe without the use of another container. Reading from 1175 equals total exhaust of battery to 1300 equal full charge..... 1.75
30540. **Hydrometer, Sugar and Syrup**, "sweet water spindle," Brix scale, -5 to +5° in  $\frac{1}{10}$ ths..... 1.25
30544. " **Morse's Rendimento**, for tropical cane sugar factories. A special hydrometer with thermometer combined, for determining the possible yield of sugar from the cane by the density of the raw juice. The hydrometer shows how much sugar to expect and, by comparing this with the actual yield, the efficiency of the factory work can be estimated..... 6.00
30548. **Hydrometer, Sugar and Syrup**, Baume scale graduated in single degrees; 0-20° and 0-50°. Each..... .75
30552. **Hydrometer, Saxe's Areo-Pycnometer**, for testing small quantities, only 3 cc of solution being necessary, range 1.000 to 1.060 specific gravity..... 2.50
30556. **Hydrometer, Vinegar**, showing percentage of acetic acid..... .75
30560. " **(Lussidimeter)**, for solids in vinegar, with thermometer..... 3.00

No. 30608

30596. **Hygrometer, Lambrecht's Polymeter**; an accurate hygrometer with thermometer and various correction scales, used both in meteorology and for industrial purposes; non-corrodible, with phosphor-bronze finish with enamel scale, total height 245 mm, diameter of scale 75 mm; not to be confused with cheaper forms of the same instrument. 12.00
30600. **Hygrometer, Miniature Form**, total height 140 mm with scale 75 mm in diameter, in non-corroding phosphor-bronze case, with thermometer; particularly recommended for laboratory use as in bacteriological incubators, etc. 14.00
30604. **Hygrometer, Lambrecht**, for factory use, for hanging on wall, without thermometer, in nickel plated zinc case, total height 150 mm, with scale 75 mm in diameter. 5.00
30608. **Incinerator, Laboratory**, for convenient disposition of laboratory and dissecting room refuse, particularly infected animal carcasses and similar material. The arrangement of the combustion chamber and burner insures the drying of wet compact refuse by allowing air passage through it until it is finally consumed. Any drip or liquid matter is caught in the trough below the burner. The apparatus is economical in its operation and because of asbestos lining causes very little heat radiation in the room and it is easy to take apart. Full directions for installation and operation are sent with each machine. A  $\frac{1}{4}$  inch gas supply pipe is necessary and a proper flue for disposing of the products of combustion. Size I is supplied with a single grate and Size II has two grates.
- |   | Size I       | Size II      |

A R T H U R H. T H O M A S C O M P A N Y

30628.	Jars, Museum, Hopkins-Columbia Model, as furnished by us in large quantities to various laboratories in Johns Hopkins University and Columbia University. The stopper of the jar is ground inside but the lid remains some distance from the upper flange. Glass and workmanship identical with No. 30620. These jars are not regularly carried in stock.										
	Height, cm.....	9	10	12	13	15	18	20			
	Diameter, cm.....	4	5	6	7.5	8	14	6			
	Duty Free, per 10.....	1.30	1.50	1.80	2.25	2.60	6.65	2.40

30632.	Jar, Museum, of same quality and finish as No. 30620 but with flat lid with air tight grinding between the lid and top of jar and with the downward projection of the lid loosely fitting into the jar, thus preventing the sticking of the lid sometimes encountered when the ground surface is inside the jar. The flat lid permits stacking of the jar either when filled or empty.

30652.	Jars, Museum, A. H. T. Co. Special Flat Top, with gound on lids of plate glass and with foot. The great variety of sizes offered and low prices have resulted in a very wide use of these jars. The foreign method of manufacture produces a jar of much finer appearance and finish and less susceptible to sudden temperature changes than corresponding were made in the U. S. See following import list for duty free prices and variety of sizes available on importation order.

No. 30924

30920. **Liquid Air Apparatus, Olszewski, Universal Type.**  
For hydrogen and other gases, latest improved model, capacity 1.2 liters of liquid air per hour when operated with a Whitehead Compressor of 7 h. p. Capacity of hydrogen 1 liter per hour with the same sized Compressor. Without Compressor.  
Duty Free.... 575.00 Duty Paid... 805.00
30924. **Thermostat for Low Temperatures, Olszewski,**  
range from 0 to  $-190^{\circ}$  C. For use with liquid air or other liquefied gas as cooling media.  
Duty Free... 325.00 Duty Paid... 455.00
30928. **Compressor, High Pressure, Whitehead,** suitable for both air and hydrogen but not for work with oxygen, requires 7 h. p. for attaining a final pressure of 200 kilograms per cubic centimeter; to be operated at 350 r. p. m. and with a loose pulley for power driving. Drawing with dimensions and other details upon application. As furnished by us to the Palmer Physical Laboratory, Princeton University. Price with direct connecting electric motor on request.  
Duty Free... 885.00 Duty Paid... 1062.00

Each.....	.75	.75	.75	.75	1.00	1.00

- 30980. Magnifiers, Coddington.** Give a good definition and a wide field. Composed of a cylinder of glass with a deep groove cut in at equal distance from ends to serve as a diaphragm; ends of cylinder ground spherically and polished to form lens surfaces. Nos. 163a, 162a, 161a, 160a are mounted for use in dissecting microscopes, and Nos. 163, 162, 161, 160 in folding pocket cases.

Number.....	163a	162a	161a	160a	163	162	161	160
Focus in Inches.....	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$
Power.....	$7\times$	$10\times$	$14\times$	$20\times$	$7\times$	$10\times$	$14\times$	$20\times$
Each.....	1.25	1.25	1.25	1.25	1.50	1.50	1.50	1.50

- 30984. Magnifiers, Triple Aplanats.** High grade magnifier with large field and perfect correction for chromatic aberration as well as flatness, astigmatism and distortion; new construction designed for highest grade work. Composed of two meniscus lenses of flint glass separated by double convex lens of crown glass. Nos. 168a, 167a, 166a, 165a are mounted for use in dissecting microscopes and Nos. 168, 167, 166, 165 in folding pocket cases.

Number.....	168a	167a	166a	165a	168	167	166	165
Focus in Inches.....	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$
Power.....	$7.5\times$	$10\times$	$15\times$	$20\times$	$7.5\times$	$10\times$	$15\times$	$20\times$
Each.....	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50

- 30988. Magnifiers, Hastings Aplanatic Triplet.** With a very large angle of view and corrections of a high order. Nos. 173a, 172a and 171a are mounted for use in dissecting microscopes and Nos. 173, 172, 171 and 170 in folding pocket cases.

Number.....	173a	172a	171a	173	172	171	170

No. 30996 141-2

No. 30996 141LP

No. 31000

- 30992. Magnifier, Tripod.** Used for elementary biological work and dissections. Lens mounting screws up and down in brass frame for focusing. Diameter of lens one inch, power  $7.5\times$ ..... .35

- 30996. Magnifier, Watchmaker's.** Easily held in orbit of the eye; No. 141LP has detachable spring to pass around the head. Lenses furnished in two different diameters (sizes 2 and 3), with same eye opening in each case. No. 141A fitted with two lenses, one removable to give two different magnifying powers as indicated below.

Number.....	144-2	144-3	144 $\frac{1}{2}$	144-2 LP	144-3 LP	144A
Lens Diam. in Inches.....	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$2\frac{1}{2}$
Range of Power.....	2 to $10\times$	2 to $5\times$	$10\times$	2 to $5\times$	2 to $5\times$	4 to $10\times$
Each.....	.40	.40	.40	.55	.55	.60

- 31000. Magnifiers, Engravers' Glass.** Designed for engravers, carvers and die cutters, also available for biological work, retouching and use as condensers because of their large clear field. Nos. 146-148 made with two plano-convex lenses giving flatter field and better image than one lens. All styles in vulcanized mountings.

Number.....	146	148	146A	148A
Lens Diam. in Inches.....	$1\frac{1}{4}$	$2\frac{1}{4}$	$1\frac{1}{4}$	$2\frac{1}{4}$

# MAGNIFIERS, ZEISS ANASTIGMATIC COMBINATION LENSES

FOR DISSECTING, ETC. These excellent combinations are to be recommended particularly because of a comparatively large field of view, excellent definition and remarkably long working distance, and are furnished in simple mount for use in a dissecting microscope, handle and lens ring, or small tripods, as well as in single and double folding pocket cases. The Brücke system is designed especially for dissecting with the Mayer Dissecting Microscope and the systems may be used separately as simple magnifiers or with the ocular for greater magnification. To secure the best results with all simple magnifiers the observer should place the eye as near as possible to the magnifier.

- 31016. Dissecting Combination Lens, Brücke,** giving powers of 11, 17, 30, 40, 60 and 100 diameters with the different combinations used singly or with the ocular lens.  
 Duty Free 10.00 Stock 12.40
- 31020. Dissecting Combination Lens, Brücke large,** with lens of a free aperture of 25 mm, power 5 to 10 diameters, with working distance from 60 to 70 mm and covering field from 7 to 13 mm in diameter..... 8.75 10.85
- 31024. Magnifiers, Anastigmatic,** in simple mount, for use on dissecting stands or in lens ring with handle, small tripods, etc.  
 Magnification..... 16 x 20 x 27 x  
 Diameter of field of view, mm..... 10 8 6

31084. Manometer, Differential, König. For measurements up to 20 mm of water pressure. With bottle of standard phenol solution. See *Lunge. Chemisch-technische Untersuchungs-methoden*, 5. Aufl., p. 189 or *Chemiker-Zeitung* 1889, p. 71. In polished case with glass door. . . . . 18.00
31088. Gauge, Seger Draft. See *Lunge's Soda-industrie*. Very sensitive, for measuring the difference of drafts in flues, etc. With bottle of phenol solution. . . . . 8.00
31092. Manometer, for measuring very slight differences in pressure, as in the determination of the specific rate of gases, etc. See *Zeitschr. für phys. und chem. Unterricht* 1905, p. 199. . . . . 6.00

# MEASURING APPLIANCES

31096. Rule, Boxwood, graduated on one side in millimeters to 30 centimeters, on the other in  $\frac{1}{4}$ th inches to 12 inches. . . . . .20
31100. Rule, Celluloid, 6 inches long, in both metric and English, with comparative Centigrade and Fahrenheit thermometer scales on the back. A convenient vest pocket rule for the laboratory work. .05
31104. Rule, Steel, with English and metric scales, graduated on one side to  $\frac{1}{16}$  millimeter and  $\frac{1}{16}$ ,  $\frac{1}{32}$ , and  $\frac{1}{64}$ th inches; and on the other to  $\frac{1}{10}$ ,  $\frac{1}{20}$ ,  $\frac{1}{40}$ ,  $\frac{1}{80}$ ,  $\frac{1}{160}$ ,  $\frac{1}{320}$ , and  $\frac{1}{640}$  inches. Length 6 inches (150 mm). .75
31108. Meter Stick, with brass bound ends, graduated in metric system on one side and in inches on the other. .50
31112. Meter Stick, as above, plain, i. e. without brass bound tips. .25
31116. Half Meter Stick, exactly the same as above but only  $\frac{1}{2}$  meter long, with metal tips. .30
31120. Rule, folding caliper, of boxwood, graduated on one side in millimeters and on the other in  $\frac{1}{16}$ th inches. Length (unfolded) inches. . . . . 6 12
- Each. . . . . .30
31124. Rule, Decimeter, Steel, one decimeter long, one centimeter wide, one millimeter thick and graduated in centimeters and millimeters. Volume is 1 cc and weight in grams is the specific gravity. In metal bound leather pocket case. . . . . .25
31128. Caliper Rule, pocket form, of polished brass, with both English and metric scale up to 6 centimeters and 2 $\frac{1}{2}$  inches. Very convenient in laboratory work. . . . . .50
31132. Micrometer Caliper, nickel plated, graduated to  $\frac{1}{1000}$ th millimeter. Sizes given are the maximum opening between jaws. Scale, from 0 to, mm. . . . . 10 15 20
- Each. . . . . 1.75 2.00 2.25
31136. Micrometer Caliper, B. & S. American Standard, 1 inch reading to  $\frac{1}{1000}$ th of an inch. . . . . 5.00
31140. " " same as No. 31136 but reading to  $\frac{1}{1000}$ th of a millimeter. . . . . 5.00

31144. **Micrometer Caliper**, for measuring the thickness of tubing walls to  $\frac{1}{10}$  mm. Particularly convenient in measuring glass or metal tubing rapidly and with accuracy. Range from  $\frac{1}{16}$  to 10 mm. 5.00
31148. **Micrometer Caliper**, roller form, for ascertaining the thickness of sheets of rubber, cloth, paper, etc. Reading in  $\frac{1}{100}$ ths of an inch up to  $\frac{3}{16}$ ths of an inch. 20.00
31152. **Micrometer Caliper**, dial form with steel box, reading on the dial to  $\frac{1}{100}$ th mm; very convenient for measurement of cover glasses in the laboratory, diameter of small wires, etc., in both laboratory and shop practice. 12.00
31156. **Micrometer Caliper**, as above, but reading to  $\frac{1}{1000}$ th of an inch. 15.00
31160. **Vernier Caliper**, for both inside and outside measuring. Of steel, graduated in millimeters to 10 centimeters, with vernier reading to  $\frac{1}{10}$ th millimeter. 1.50
31164. **Vernier Caliper**, of steel, graduated in millimeters and inches, 20 centimeters long, with vernier reading to  $\frac{1}{10}$ th millimeters. 2.00
31168. **Caliper**, plain, of steel, for inside and outside measurements. .60
31172. " with graduated measuring arc, reading in millimeters to 80 mm and in  $\frac{1}{16}$ th inches to 3 inches 1.75
31176. **Measuring Cones**, of steel, nickel plated, for measuring holes, graduated to  $\frac{1}{10}$ th millimeter. Scale, mm. 1 to 15 15 to 30
- Each. 1.00 1.50
31180. **Tape Measure, Linen**, with English and metric graduations. In nickel plated case with spring. Total length, meters. 1 2
- Each. .25 .40
31184. **Tape Measure, Steel**, with metric divisions on one side and English on the other. In German silver case with spring. Very convenient in laboratory work. Total length, meters. 1 2
- Each. .75 1.00

No. 31188

31188. **Micrometer Microscope**, a measuring device for use in calibrating or verifying thermometer scales etc., or as a comparator. With two microscopes mounted on horizontal carrier, each with micrometer fine adjustment and one with Fraunhofer ocular micrometer. Reading by means of Fraunhofer micrometer to  $\frac{1}{100}$  millimeter.
- Duty Free. 84.00
- Duty Paid. 105.00

No. 31192

No. 31196a

No. 31200

No. 31196b

31192. **Micrometer Measuring Machine, Model of 1910**, for actual as well as comparative measurements, reading by comparison to an accuracy of  $\frac{1}{1000}$ th of a millimeter and giving absolute value measurements to  $\frac{1}{1000}$ th of a millimeter; total length which may be measured 300 mm, with centering device. This instrument is of great value in shop and laboratory practice where great accuracy is desired. Larger models measuring up to 2 meters quoted on application.
- |                        |        |                        |        |

|------------------------|--------|------------------------|--------|
31200. **Micrometer, Measuring**, with vertical and horizontal scale on silver reading to  $\frac{1}{1000}$ th millimeter. The vertical and horizontal scales are 16 cm long and are both actuated by rack and pinion. The microscope rotates in a vertical plane and may be clamped in any position. The horizontal and vertical positions of the microscope are definitely marked. A glass micrometer scale is placed in the common focus of the eyepiece and objective and serves to measure very short distances without moving either slide. By substituting a telescope objective the instrument may be used as a reading telescope or as a short range cathetometer. With one ocular, a 2 inch micro objective and extra telescope objective.
- |                        |       |                        |       |

No. 31208

31208. **Micrometer Microscope, or Comparator**, for the most accurate measurement of spectrographic negatives and other measurements of great accuracy. The separation of two spectral lines, for instance, is measured by direct comparison to a small scale on the speculum metal, the coefficient of expansion of which is equal to that of the plate itself; reading by means of Fraunhofer micrometer in the ocular to  $\frac{1}{1000}$  millimeter, which diminishes the error of the thread  $\frac{1}{10}$ th. Particularly recommended for rapid measurements as the screw carrying the stage or table is immediately disengaged and its position changed.

For measuring over, cm.....	9 x 12	13 x 18
Duty Free.....	321.60	480.00
Duty Paid.....	402.00	600.00

No. 31212

31212. **Micrometer Microscope, Hilger, 1913 Model** embodying the following modifications—

The mirror moves with the travelling microscope.  
The milled head for turning the screw has been replaced by a handle.  
The standards which support the slide and substage are so designed that the axis of the microscope is sloped towards the observer.  
A vernier has been added, reading to 0.001 mm.

Though specially designed for rapid and accurate measurements of spectrum photographs, this instrument can be used with equal advantage for any of the accurate length measurements needed in a laboratory. With the aid of the handle now provided, one can pass rapidly over the whole range of motion, while at the same time the large drum-head enables measurements to be taken to 0.001 mm. The base is of cast iron and the microscope slide is mounted on two cast iron standards of such shape as to form convenient handles for moving the instrument.

No. 31216

No. 31216

**MICROSCOPE, MEASURING AND SCREW TESTING, LARGE MODEL.** This instrument has been designed to give absolute measurements of small objects to a very fine degree with extreme accuracy. It is particularly useful for measuring and checking such articles as micrometer screws, divided scales, standard gauges, dies, etc., and is constructed for great ease of manipulation in such work. It is designed to give the length and pitch of a screw to .001 mm, the maximum, minimum and effective diameters and depth of thread to .01 mm, and the angle of the thread to 5' without the necessity of moving the screw after it has been once set up for examination.

The object, according to its shape, is either held in one of the chucks, A, of the rotating, divided holder, B, or fixed on the stage and its length measured by moving it across the field of the webbed ocular, P, by means of a micrometer screw with a divided head, C. The pitch of this screw is .5 mm and the head is divided into 100 parts; the fractions of these divisions are read from a vernier to  $\frac{1}{1000}$  mm or  $\frac{1}{2500}$  inch. Entire millimeters are shown by an index on the scale, D. The plate of the stage is held against the flint hard point of the screw by two long spiral springs set in the same plane as the dove-tailed fittings, one on each side equally displaced. The point of the screw is turned on a separate piece of steel to the thread; it is hardened, ground and polished, and let into the main piece before the thread is cut. This is done to prevent distortion of the thread which would occur if the hardening were done after cutting. The screw, which is of the most accurate description, is cut between dead centres with a single point.

The width of an object is measured by moving it across the field by means of the milled head, F; the amount of the traverse is read to .01 mm by the scale and vernier, G.

The angle between two lines, edges, sides, etc., as, for example, the angles of a screw thread, is ascertained by rotating the webbed ocular. One of the webs is brought coincident with a side and the milled head of the tangent screw, H, is turned until the web coincides with the other side. The angle is given on the scale and vernier, K, to 5'.

The milled head, L, actuates a tangent screw which inclines the object under examination to the optic axis; the degree of inclination is read to 5' by the scale and vernier, M. As the object lies in the same plane as the axis of rotation it does not go out of focus on being inclined. When the pitch of a screw is being measured the screw should be inclined the same number of degrees as the angle at which the thread crosses it; this angle can be approximated or else measured accurately by means of the circle attached to the ocular.

The object is focused by an ordinary rack and pinion coarse adjustment and a micrometer screw fine adjustment; the milled head, N, of this latter is divided to read direct to .01 mm. This divided head is of use in obtaining the correct position for viewing the profile of a screw thread. To effect this, the top of the thread is focused on the cross-wires of the ocular and the body is lowered by means of the fine adjustment an amount equal to the secant of the angle through which the screw is tilted on the stage multiplied by half the maximum diameter of the thread.

Extremely large objects, such as milling cutters, hobs up to 2½" diameter, etc., can be accommodated on the instrument by means of special arms attachable to the stage which holds adjustable male and female centres.

31216. **Microscope**, as above described, with 1½ inch objective, cross-webbed ocular and complete set of chucks for carrying micrometer screws, small taps, etc., in strong wooden case.....
31220. **Attachable arms**, for carrying large objects.....
31224. **Extra Objectives** 2 inch, 1 inch or ¾ inch focus.....

Model A

Model C

**MICROSCOPE, MEASURING, ZEISS, MODELS A, B AND C,** with horizontal movement of the microscope tube of either 20 or 50 mm and reading by means of micrometer head to  $\frac{1}{50}$  mm. Model A is intended for use with objects which may be placed upon the stage, i.e. graduations, small castings, etc., and especially for the measurement of the concavities in metals produced by the Brinell Ball Test. In large pieces or castings the microscope body is removed from the base and clamped in a regular laboratory support as in Fig. 2. Model B differs from Model A only in the base and stage arrangement which consists in a heavier base with revolving circular stage permitting two measurements of diameter, for instance, at 90° each from the other. Model C consists in a base, as in an ordinary microscope, with stage and mirror for the examination of photographic plates, spectrographs, or other objects by means of transmitted light. With model C higher power objectives may be used such as A<sub>3</sub> (26 diameters) and AA (54 diameters). The stage plate shown in illustration of Model A is removable so that the whole microscope with base may be conveniently placed upon large castings in the measurement of Brinell test depressions, etc.

	Duty Free	Duty Paid
31228. Model A, with horizontal motion of 20 mm, without objectives or oculars, in case.....	50.00	62.00
31232. Model A, with horizontal motion of 50 mm without objectives or oculars, in case.....	56.25	69.75
31236. Model B, with horizontal motion of 20 mm, with heavy base and removable revolving circular stage, without objectives or oculars, in case.....	65.00	80.60
31240. Model B, as above but with horizontal motion of 50 mm.....	71.25	88.35
31244. Model C, with horizontal motion of 20 mm, with stage and mirror for transmitted light, without objectives or oculars, in case.....	68.75	85.25
31248. Model C, as above but with horizontal motion of 50 mm.....	75.00	93.00

For more detailed information send for a copy of Zeiss, Mess 152.

31272. **Cathetometer**, for either horizontal or vertical use, consisting of a brass bar, hexagonal section, mounted between two hardened steel centers and which can be clamped in any position in azimuth. The scale is divided in millimeters and the carriage is provided with spring and clamp. The position of the telescope is read by means of verniers to  $\frac{1}{100}$ th millimeter. The telescope has a focal length of about 7 inches and a clear aperture of  $\frac{1}{4}$  inch and is provided with level and cross-wires and may be focused from infinity to within three feet.

31284. **Reading Microscope**, with Ramsden eyepiece, with 5 mm scale divided into  $\frac{1}{10}$  mm. This is a most useful microscope for reading thermometers, electroscopes, etc; in general laboratory work. It is furnished with objectives of two foci and prices do not include any support. The magnifying power of the 4 cm focus is 20 diameters and of the 10 cm focus 12 diameters.

### METALLOGRAPHIC APPARATUS

No. 31320

**MICROSCOPE, METALLURGICAL, SAUVEUR-BAUSCH AND LOMB, latest model Handle Arm Type with lever fine adjustment, with rack and pinion for the raising and lowering of the stage so that focusing may be done without moving the vertical illuminator out of the optical axis of the illuminating system and also providing a much greater working distance for thick specimens. With circular revolving stage with large size opening ( $1\frac{1}{2}$  inches) in the center, for convenience in manipulating the Sauveur magnetic specimen holder. This is the most widely used microscope in metallurgical laboratories in the U. S. and the outfit as regularly supplied consists of Sauveur Metallurgical Stand; two oculars, 10X and 5X; three special metallographic objectives, i.e. short mounted and corrected for use without cover glass, of 32, 16 and 4 mm e.f.; vertical illuminator; two stage specimen holders, one magnetic and the other non-magnetic, and auxiliary tube, in polished case.**

31312. Microscope, as above, without Sauveur Mechanical Stage ..... 128.00

31316. Microscope, as above, with Sauveur Mechanical Stage as shown in illustration ..... 150.00

**MICRO-PHOTOGRAPHIC APPARATUS FOR METALLOGRAPHY, SAUVEUR-BAUSCH & LOMB.** This outfit offers the advantage of a photo-micrographic outfit with microscope which may be removed for regular work on the table and instantly replaced in proper position on the outfit or mounted with the illuminant on one solid support with all adjustments.

**Supporting Stand**—Of cast iron, neatly finished and very stable; has four supports with 25-inch lateral spread, provided with both castors and leveling screws; carries plate,  $21 \times 7\frac{1}{2}$  in., at height of 22 in. from floor, to which plate are attached the optical beds.

**Optical Beds**—Two in number, of lathe type, carefully planed, one accommodating supports for the microscope, are lamp with condensing system, table for macroscopic photography (of rail sections, etc.), and parts for lantern slide and transparent microscopic projection when these are desired. The other, graduated to 640 mm, carries camera and is attached to base plate by strong hinge joint, permitting the camera to be used in any position from vertical to horizontal.

**Illuminant**—90 deg. hand feed arc lamp for use with direct or alternating current, enclosed in a small cylindrical hood with observation windows, attached to rear of condensing mount; carbon adjustments so arranged as to be conveniently reached from the observer's position either at the microscope or at the camera. Carbons may be adjusted either separately or together.

**Condensing System**—Triple condensing system with lenses  $4\frac{1}{2}$  in. diam. in patent ventilated mount, which is in turn mounted in a cylindrical metal hood, 9 in. long and 5 in. diam., in which the condensers may be easily adjusted to and fro with reference to the lamp; a cylindrical extension slips over the end of the hood and helps to render the apparatus more nearly light-tight; a spring clip is provided for holding filter screens. A green monochromatic screen is provided with the outfit as this has been found to be almost indispensable for the best photomicrographic work; entire illuminating apparatus is carried by a special fork and standard, adjustable for height and also to and fro on the optical bed, and provided with conveniently located adjustment screws for shifting its direction vertically or laterally. The lamp may also be tilted at an angle for transparent and for oblique illumination.

**Camera**—Regularly supplied with camera for  $5 \times 7$  in. plates and smaller, having a maximum bellows draw of 24 in., equipped with double plate holder with reducing kits for  $4 \times 5$  in. and  $3\frac{1}{2} \times 4\frac{1}{2}$  in. plates and a ground glass screen with clear center; in adjustable mounting on two supports clamped to optical bed; front standard fitted with sliding light-tight tube to connect with microscope. A similar camera to take  $4 \times 5$  and  $3\frac{1}{2} \times 4\frac{1}{2}$  in. plates can be supplied at a reduction of \$10.00 in the price. We strongly recommend the regular  $5 \times 7$  camera, however.

**Shutter**—Automatic with steel leaves, having a maximum opening of 10 mm. may be set with instantaneous, bulb or time exposure.

31320. Micro-photographic Outfit, as above described, including Sauveur-Bausch & Lomb Metallographic Microscope No. 31316 with Mechanical Stage and 5 ampere rheostat for 110 volt circuit. . . 310.00

31324. Micro-photographic Outfit, as above, for 220 volts. . . 311.50

31328. " " " " without Mechanical Stage. . . 288.00

31332. " " " " Microscope. . . 160.00

**Note**—If a  $4 \times 5$  camera is desired \$10.00 may be deducted from each of the above prices.

31336. Set of Lantern Slide Accessories consisting of supports, bellows, slide carrier, mounted condenser and  $1\frac{1}{2}$  inch diameter projection lens of either 6, 8 or 10 inch focus, as desired. . . 17.50

31340. Extra Carbons for lamp. Please state whether current is alternating or direct. Per 100. . . 2.50

31344. Focussing Glass. . . 4.00

No. 31348

No. 31348

**MICRO-PHOTOGRAPHIC OUTFIT FOR METALLOGRAPHY WITH INVERTED SAUVEUR-BAUSCH & LOMB METALSCOPE.** The microscope included with this outfit is of the inverted or Le Chatelier type, with fine adjustment controlled from the rear of the camera by a small milled head pulley. The illuminant is set at a convenient angle to the bed of the camera and arc may be conveniently set without movement from the position necessary at time of focusing. A separate microscope tube is provided for visual examination and with the vertical illuminator permanently fixed the only adjustment necessary is the arc lamp.

**Supporting Stand**—Of cast iron, neatly finished and very stable; with four supports with 25-inch lateral spread, provided with both castors and leveling screws; carries plate, 21 x 7½ in., at height of 40 in. from floor, to which plate are attached the optical beds.

**Optical Beds**—Two in number, of lathe type, carefully planed, one accommodating supports for the arc lamp with condensing system. The other, graduated to 640 mm, carries the camera.

**Microscope**—As described above.

**Illuminant**—90 deg. hand feed arc lamp consuming about 4½ amps. for use with direct or alternating current, enclosed in a small cylindrical hood with observation windows, attached to rear of condensing mount; carbon adjustments so arranged as to be conveniently reached from the observer's position either at the microscope or at the camera. Carbons may be adjusted either separately or together.

**Condensing System**—Triple condensing system with lenses 4½ in. diam. In patent ventilated mount, which is in turn mounted in a cylindrical metal hood, 9 in. long and 5 in. diam., in which the condensers may be easily adjusted to and fro with reference to the lamp; a cylindrical extension slips over the end of the hood and helps to render the apparatus more nearly light-tight; a spring clip is provided for holding filter screens. A green monochromatic screen is provided with the outfit, as this has been found to be almost indispensable for the best photomicrographic work; entire illuminating apparatus is carried by a special fork and standard, adjustable for height and also to and fro on the optical bed, and provided with conveniently located adjustment screws for shifting its direction vertically or laterally.

**Camera**—Regularly supplied with horizontal camera for 5 x 7 in. plates and smaller, having a maximum bellows draw of 24 in., equipped with double plate holder with reducing kits for 4 x 5 in. and 3½ x 4½ in. plates and a ground glass screen with clear center; in adjustable mounting on two supports clamped to optical bed; front standard fitted with sliding light-tight tube to connect with metaloscope. A similar camera to take 4 x 5 and 3½ x 4½ in. plates can be supplied at a reduction of \$10.00 in the price. We recommend the regular 5 x 7 camera, however.

**Shutter**—Automatic with steel leaves, having a maximum opening of 40 mm may be set with instantaneous, bulb or time exposure.

| 31364. | Extra Carbons for lamp. Please state whether current is direct or alternating. Per 100.   | 4.00   |
- Note—If 4 x 5 camera is preferred, \$10.00 may be deducted from each of the above prices.

No. 31368—Showing entire outfit conveniently packed in portable case

No. 31368—In position for use on a casting and with electric illumination

**METALLOGRAPHIC MICROSCOPE AND CAMERA, TASSIN-BAUSCH & LOMB**, a portable outfit for the microscopical investigation of structural metals and other surfaces; particularly designed for the practical study of the forging, casting or bar as it is turned out rather than from specimens cut from the piece which must be taken to the laboratory for examination. The Tassin Apparatus consists essentially of three parts, the Microscope, the Illuminating Apparatus and the Camera.

**Microscope**—The microscope is of Bausch & Lomb handle arm type. It has a large stage which is provided with leveling screws and forms the base of the instrument. The stage measures 119 x 92 mm, with a distance of 41 mm from its center to the base of the arm. The effective length of the leveling screws is 36 mm. The object under examination is viewed through a circular aperture in the stage, 31 mm in diameter. The stage, of course, may also be used in the regular way when the size of the specimen permits.

The body tube, carrying the objective, illuminating apparatus and ocular, is moved up and down by a rack and pinion adjustment for approximate focusing, the exact focus being obtained by means of a fine adjustment of lever type with a milled micrometer head. A post with clamp is attached to the body tube so that the tube, after the focus has been obtained, cannot be forced down while attaching the camera, thus eliminating all risk of disturbing the focus or injuring the objective by forcing it down against the object.

**Illuminating Apparatus**—At the lower end of the body tube is attached the illuminating apparatus, to which in turn is fastened a quick changing nosepiece, permitting a ready interchange of objectives. The illuminating apparatus shown in position in illustration, consists of a vertical illuminator and an arm, to the outer end of which is clamped an upright metal arm, carrying a condensing system in an adjustable tube, a metal shield and an illuminant attached at the rear of the shield.

The illuminant may be either a 6-volt, 16 c.p. Mazda lamp or a small Acetylene burner, both of which are supplied with the complete outfit. The former illuminant is shown in illustration, the Mazda lamp being mounted in a metal hood attached to the shield by clips fitting over insulated lugs.

A resistance bank is supplied for use with the Mazda lamp to permit one to take current from either the regular 110- or 220-volt, direct or alternating circuit. This resistance bank is provided with six lamp sockets but is furnished without lamps. If it is desired to use the Mazda lamp regularly supplied with a 110-volt circuit, either direct or alternating, the bank should be equipped with two 32 c. p. and 16 c. p. carbon lamps; if a 220-volt circuit is to be used, the lamp should be fitted with five 32 c. p. carbon lamps.

When acetylene is to be used, the burner is attached to the back of the shield by means of a rod and clamp. The gas may be supplied by a charged acetylene tank, as used on automobiles, or by the generator listed.

Within the vertical illuminator is an adjustable reflector of clear glass. Openings in the mounting permit the light from the illuminant to reach this reflector, which directs it upon the object. Adjustments are provided for centering the light properly. After the correct position has once been established, no further attention need be paid to the position of the light source since it travels with the body tube in focusing.

**Camera**—The camera is of metal, 10 inches in length. It is provided with a focusing ground glass, two double plate holders for 3 x 3-inch plates and a small trap shutter. The front board is fitted with a draw tube which is inserted in the body tube of the microscope in place of the regular draw tube when making a negative. Two oculars are therefore desirable, one for each draw tube.

The three objectives regularly supplied, i.e., the 32, 16 and 8 mm., when used with a 7.5X ocular, will give magnifications of 30, 60 and 150 diameters, respectively.

Since one may often wish to know, before leaving the job, what sort of negatives he has obtained and there may not be a dark room at hand, we provide a changing bag and a tank for daylight developing to meet this contingency. Any good orthochromatic plate may be used with any standard developer and fixing solution.

Price list on following page.

31368.	Tassin Metallographic Equipment complete, as above, consisting of the following parts: special microscope stand; quick changing nosepiece with three rings; two eyepieces, 7.5X; three objectives, 32, 16 and 8 mm; vertical illuminator; Tassin illuminating apparatus complete for acetylene; electric light attachment with Mazda lamp; resistance bank with cord, fuse block and connecting plug; Never Out Acetylene Generator No. 3 with six feet of rubber tubing; camera; 2 doz. Seed plates; hand magnifier; package of developing powders; focusing cloth; changing bag; carrying case with fittings	122.00
31372.	Special Microscope with stage 119 x 92 mm, with four leveling screws, rack and pinion and lever fine adjustments	26.75
31376.	Quickchanging Nosepiece with three rings	7.00
31380.	Eyepiece 7.5X	1.50
31384.	Objective 32 mm	4.00
31388.	Objective 16 mm	5.00
31392.	Objective 8 mm	8.00
31396.	Vertical Illuminator	6.50
31400.	Tassin Illuminating Apparatus for acetylene	15.00
31404.	Tassin Illuminating Apparatus for electricity including illuminator, hood, 6-volt Mazda lamp and socket	17.50
31408.	Electric Light Attachment consisting of hood, lamp and socket	3.50
31412.	Resistance Bank with snap switch and sockets for six lamps, fuse block, cord and plug; necessary for use with electricity; furnished without lamps	7.50
31416.	Never Out Acetylene Generator No. 3	9.00
31420.	Camera with ground glass, two plate holders, shutter and draw tube	13.50
31424.	Changing bag	1.25
31432.	Developing tank	4.00
31434.	Carrying Case	8.00

**METALLOGRAPHIC MICROSCOPE, REICHERT.** The advantage of this instrument is the manner in which the light is brought to bear upon the preparation and the more perfect quality of the illumination obtained thereby. The specimen requires one prepared surface only, which does away with the necessity of providing it with two approximately parallel planes, the instrument being so arranged that the polished surface rests upon a stage set accurately at right angles to the optic axis. The apparatus is fitted with convenient appliances for taking rapidly a series of photographs; a new and convenient form of slow adjustment with slide motion and micrometer screw at the side, the whole acting on the principle of the screw and inclined plane and thereby furnishing an exceedingly sensitive and exact adjustment.

Fig. 4

Fig. 5

Fig. 4 shows diagrammatically the path of the rays. The rays emitted by the source of light are brought to bear upon the object by means of a prism and the objective, the function of the latter being both that of a magnifying lens and that of a condenser. The light reflected at the object passed into the prism  $P_2$ , by which means it is deflected into the horizontal tube  $I$  and so reaches the observer's eye. To pass from observation with the eye to photographic records the prism marked  $P_2$ , in Fig. 4 can be given a quarter turn about an axis at right angles to the plane of the stage. The photographic plate, as shown in Fig. 7, is placed at right angles to the optical bench which carries the illuminating appliances. To facilitate the observation of the image the instrument may have appended to it an eyepiece elbow fitting which is inserted into the sleeve of the horizontal tube of the microscope. The rays are deflected upwards by a prism and thence pass through the eyepiece to the eye. The advantage of this arrangement is that it enables the worker to assume his accustomed posture. Fig. 5 shows the arrangement of the illuminating appliances and their order of sequence. A suitable illumination is furnished by any of the usual sources, such as Welsbach burners, Nernst lamps, Liliput arc lamps, and arc lamps taking large currents, whilst in photomicrographic work preference should be given to one of the three last named sources. The whole of the illuminating appliances, the wheel diaphragm  $I$  (Fig. 5) and the condensing lens  $B$  are accommodated in a tube fitting which attaches to the microscope stand. In the same tube there is a slit for the glass screens and the light filter trough furnished with the microscope.

Fig. 8

Externally the complete Metallograph presents the form shown in Fig. 6. It will be seen that a heavy sole-plate is surmounted by a pillar, which, like other Reichert microscope stands, is provided with a loop serving as a convenient handle for lifting the microscope. This pillar carries the rack and pinion mechanism for the coarse motion of the stage, as well as a mirror capable of being moved in all directions.

Fig. 6. No. 31436. Microscope with Circular Mechanical Stages

**METALLOGRAPHIC MICROSCOPE, REICHERT, (cont.)**

The stage of the microscope is of the revolving and centering type, two screws being fitted to the side of the stage frame by means of which the specimen may be displaced by a few millimeters in any direction. Larger displacements may either be made by hand or with the aid of the compound mechanical stage. Fig. 7 represents this microscope as set up in combination with a photographic apparatus. The latter rests with its heavy metal feet upon an optical bench set at right angles to the centre line of the illuminating appliances. The tube facing the camera is optically connected with the latter by means of a sleeve and socket arrangement. The picture on the camera screen can be readily focused with great nicety by means of the movable eye lens of the projection eyepiece without in any way interfering with the adjustment of the eyepiece in the drawtube. To make the transition from ocular observation to photomicrography all that is necessary is to turn the small lever under the prism mount horizontally up to its stop. An image which has been sharply focused with respect to the ordinary eyepiece will then appear sharply upon the camera screen. Nevertheless, especially when light filters are being used, it is advisable to complete the fine adjustment by focusing on the screen. In this case the slow motion is transmitted to the microscope by means of a Hooke's key fitted with a socket by which it may be attached to the micrometer head facing the camera.

The Camera of the metallographic apparatus may be fitted with a focusing mirror, which adds materially to the ease and rapidity with which the apparatus can be used. It enables the observer, after completing the adjustment of the microscope, to obtain a sharp focus on the ground glass focusing screen without having to leave his seat. The ground glass focusing screen M is in this case at the side and parallel to the track of the camera, whilst the dark slide K remains in its usual position. It will be seen that the vertical mirror Sp, as shown in Fig. 8 is hinged between the ground glass focusing screen M and the dark slide K and may be turned about its axis by means of the lever fitted to the outside of the case. To view the image on the screen the mirror should be placed at an angle of 45° to the axis of the camera (Fig. 8) and during exposure it should be turned back in the direction of the arrow so as to lie close to the ground glass screen. This arrangement is particularly convenient in all cases where the use of feeble sources of light coupled with high magnifications necessitate long exposures. In such cases the arrangement may be readily controlled during the exposure.

31436.	Metallographic Microscope, Reichert, as shown in Fig. 6, with rack and pinion coarse adjustment, micrometer screw fine adjustment with milled heads at the side reading displacements of 0.001 mm, with centring revolving stage, also with wheel diaphragm, condensing lens, two glass screens, and one light-filter trough in a tube fitting. Without objectives or eyepieces.

## MICROSCOPES AND ACCESSORIES

No. 31604—BH2  
with stage iris diaphragm

The BH Microscopes are probably more widely used throughout the U. S. for students' laboratory work than any other make or type of Microscope.

No. 31616—BH8  
with regular quick acting screw substage

**MICROSCOPE, BAUSCH & LOMB TYPE BH.** This microscope is probably more widely used for students' laboratory work in the U. S. than any other make or type of instrument. It was the first Handle Arm Microscope with the modern adaptation of the lever fine adjustment and was such a pronounced success that the modification of the other instruments, BBH, CAH and DDH, rapidly followed. With the addition of a substage of the quick acting screw type, Abbe condenser, and iris diaphragm, the BH type is available for bacteriological and other work requiring the use of the oil immersion objective of 1.9 mm focus. This is designated as the BH8.

**Body Tube**—Provided with society screw thread; draw tube graduated in single millimeters with every tenth line numbered, adjustable in cloth lined sleeve, or in metal fitting if so specified, and provided with society screw thread for the use of low power objectives.

**Focusing Adjustment**—Coarse adjustment by standard rack and pinion; fine adjustment of the Bausch & Lomb lever type with two-sized knurled head for slow and rapid movement, ceasing to operate when objective touches the slide.

**Stage of BH1 to 4**—Of metal completely covered with vulcanized rubber, measuring 103×101 mm, with a distance of 59 mm from center to base of arm, provided with spring clips, an iris diaphragm so mounted as to be readily detached if desired and screw threads for attaching a substage ring to hold an Abbe condenser; iris diaphragm controlled by knurled ring, operated from any point of its circumference.

**Substage of BH8**—Adjustable for focus by a quick-acting screw; consists of a mounting for the Abbe condenser and an iris diaphragm, which comes into the plane of the stage when the screw is turned up as far as possible, allowing the condenser to be used in immersion contact with the slide; substage is swung to the left of the optical axis when screw reaches the limit of motion downward; iris diaphragm is automatically locked against closing when condenser is in position.

**Finish**—Main parts including body tube in alcohol proof black, adjustment heads in yellow.

**Case**—of hard wood with polished finish, fitted with brass lock and key.

	Outfit	Objectives		Eyepieces	Nosepieces	Abbe Condenser	Price
		Dry	Oil Immersion				
31600.	BH1	16 mm	4 mm	7.5 ×			27.50
31604.	BH2	16 mm	4 mm	7.5 ×	Circular Double		31.50
31608.	BH3	16 mm	4 mm	5 × 10 ×			29.00
31612.	BH4	16 mm	4 mm	5 × 10 ×	Circular Double		33.00
31616.	BH8	16 mm	4 mm 1.9 mm	5 × 10 ×	Circular Triple	1.20 N. A.	70.00

**Note**—Microscopes BH1, BH2, BH3 and BH4 are furnished with a substage ring and Abbe condenser 1.20 N. A., in an iris diaphragm mounting at an additional cost of \$7.50. The Abbe Condenser in the BH8 outfit is supplied in the regular quick acting Screw Substage. The above are the outfits regularly supplied. Prices on special outfits quoted on application.

No. 31640-BBH8  
with regular quick-acting screw substage

The BBH8 Microscope is the standard throughout the U. S. for medical and other advanced laboratory work.

No. 31660-CAH8  
with complete substage

**MICROSCOPE, BAUSCH AND LOMB TYPES BBH AND CAH.** The BBH Microscope is the handle arm successor of the BB Microscope which was for many years the standard microscope throughout the United States for physicians' use and for laboratory work in all advanced work. The CAH Microscope differs from the BBH only in size and having the complete substage and is recommended for the individual use of scientists doing more advanced work. Unless otherwise stated the following specifications apply to both types.

**Body Tube**—Outside diameter, 39 mm; provided with society screw thread; standard size eyepieces are used; draw-tube graduated in single millimeters with every tenth line numbered, adjustable in cloth-lined sleeve, or in metal fitting, if so specified, and provided with society screw thread for the use of low power objectives.

**Focusing Adjustment**—Coarse adjustment by standard rack and pinion; fine adjustment of Bausch & Lomb lever type with double knurled micrometer screw head for slow and rapid movement, the larger part graduated into 100 divisions, each equal to .0025 mm in vertical movement, and provided with a hinged indicator, which may be turned back from the head; fine adjustment ceases to operate when objective touches the slide.

**Stage**—of BBH—of metal, covered with vulcanized rubber; measures 120 x 107 mm, with a distance of 70 mm from its center to base of arm; provided with spring clips.

**Stage**—of CAH—as above, measures 123 x 115 mm; with a distance of 75 mm from its center to base of arm.

**Substage**—of BBH—adjustable for focus by a quick acting screw; consists of a mounting for the Abbe condenser and an iris diaphragm, which comes into the plane of the stage when the screw is turned up as far as possible, allowing the condenser to be used in immersion contact with the objective, if desired; substage is swung to the left of the optical axis when screw reaches the limit of motion downward.

**Substage**—of CAH—complete with swing-out condenser of Bausch & Lomb new construction, and arranged to take all the substage accessories; adjustable by standard rack and pinion; upper iris diaphragm of dome shape, self-locking, combined with Abbe condenser, the whole easily removable from substage; Abbe condenser removable from optical axis by a double swing movement to one side, releasing upper iris diaphragm for use; lower iris diaphragm adjustable laterally by rack and pinion for oblique illumination, revolvable about its own axis and mounted on a swinging arm allowing it to be swung entirely out of the optical axis.

**Finish**—Main parts including body tube in alcohol proof black, adjustment heads in yellow.

**Cases**—Of hard wood with polished finish; fitted with brass lock and key.

#### Objectives

	Outfit	Dry	Oil Immersion	Eyepieces	Nosepieces	Abbe Condenser	Price
31620.	BBH1	16 mm 4 mm		7.5 ×			41.50
31624.	BBH2	16 mm 4 mm		7.5 ×	Circular Double		45.50
31628.	BBH3	16 mm 4 mm		5 × 10 ×			43.00
31632.	BBH4	16 mm 4 mm		5 × 10 ×	Circular Double		47.00
31636.	BBH6	16 mm 4 mm		5 × 10 ×	Circular Double	1.20 N. A.	54.50
31640.	BBH8	16 mm 4 mm	1.9 mm	5 × 10 ×	Circular Triple	1.20 N. A.	80.00
31644.	CAH1	16 mm 4 mm		7.5 ×		1.20 N. A.	76.00
31648.	CAH2	16 mm 4 mm		7.5 ×	Circular Double	1.20 N. A.	80.00
31652.	CAH3	16 mm 4 mm		5 × 10 ×		1.20 N. A.	77.50
31656.	CAH4	16 mm 4 mm		5 × 10 ×	Circular Double	1.20 N. A.	81.50
31660.	CAH8	16 mm 4 mm	1.9 mm	5 × 10 ×	Circular Triple	1.20 N. A.	110.00

Note: The new swing-out mounting for the Abbe Condenser with upper and lower iris diaphragms, is substituted for the regular one in the BBH6 and BBH8 outfits at an additional cost of \$5.00. When ordering this mounting, please specify "screw substage with swing-out condenser."

No. 31680—DDHs with Revolving Mechanical Stage  
and Complete Substage

**MICROSCOPE, BAUSCH AND LOMB TYPE DDH.** This is the largest and most elaborate of the Bausch and Lomb Handle Arm series and is particularly designed for advance research work, photo-micrography, etc.

**Pillar**—Double rectangular in section, provided with inclination joint and clamping lever to secure the instrument in any position and with stops in the vertical and horizontal positions.

**Body Tube**—Of aluminum, 59 mm outside diameter; provided with society screw thread; standard size eyepieces are used; draw tube graduated in single millimeters with every tenth line numbered, adjustable in cloth-lined sleeve, or in metal fitting, if so specified, and provided with a society screw thread; lower collar may be removed for attaching the Micro-Tessar, 72 mm objective.

**Focusing Adjustment**—Coarse adjustment by standard rack and pinion; fine adjustment of Bausch & Lomb lever type with micrometer screw head in two parts for slow and rapid movement, the larger graduated into 100 divisions, each equal to .0025 mm, in vertical movement, and provided with a hinged indicator, which may be turned back from the head.

**Stage**—Revolving mechanical, with circumference graduated into single degrees and read by a convenient vernier; measures 126 mm outside and 112 mm inside the graduations; provided with two rack and pinion movements, covering a range of 75 mm and 35 mm, respectively; provided with centering screws and removable for substitution of plain stage, if desired, or upper part may be removed, leaving a large, flat surface with one rack adjustment.

**Substage**—Complete with swing-out condenser and so arranged that all substage accessories, inserted into the upper sleeve, may be easily employed; adjustable by standard rack and pinion; upper iris diaphragm of dome shape, self locking, combined with Abbe condenser, the whole easily removable from substage; Abbe condenser removable from optical axis by a double swing movement to one side releasing upper iris diaphragm for use; lower iris diaphragm adjustable laterally by rack and pinion for oblique illumination, revolvable about its own axis and mounted on a swinging arm, allowing it to be swung entirely out of the optical axis.

**Finish**—Main parts, including body tube, in alcohol proof black; adjustment heads and buttons in yellow.

**Case**—Of hardwood with polished finish; fitted with brass lock and key.

No. 31696-F4  
with stage iris diaphragm

The F and FF Microscopes embody all the advantages of the Lever Fine Adjustment combined with the Curved Arm.

No. 31700-FF8  
with regular quick-acting screw substage

**MICROSCOPE, BAUSCH & LOMB CURVED ARM TYPE F & FF.** This Microscope is the latest development of the handle arm type with lever fine adjustment and is preferred by many to the BH type because of the facility and safety with which the arm of the microscope may be grasped by the whole hand and because of the large amount of space available for manipulation of the object on the stage.

**Body Tube**—Provided with society screw thread; standard sized eyepieces are used (23 mm diam.); draw tube graduated in single millimeters with every tenth line numbered, adjustable in cloth lined sleeve or in metal fitting, if so specified, and provided with society screw thread for the use of low power objectives.

**Focusing Adjustment**—Coarse adjustment by standard rack and pinion, provided with stop to prevent pinion from overriding rack; fine adjustment of Bausch & Lomb original lever type with two-sized knurled head for slow and rapid movement, ceasing to operate when objective touches the slide; adjustment head locked to prevent removal; all parts of fine adjustment thoroughly dust-proof.

**Stage**—of metal, completely covered with vulcanized rubber except at point of attachment; measures 102 x 102 mm, with a distance of 76 mm from center to arm at stage surface (distance from optical center to extreme inner curve of arm, 83 mm); provided with spring clips. In the F1 to F4 outfits the stage is provided with an iris diaphragm with mount having screw threads for attaching a substage ring to hold an Abbe condenser; iris diaphragm controlled by knurled ring, operated from any point of its circumference; stage attached to arm on broad bearing surface to insure maximum rigidity.

**Finish**—Main parts including body tube in alcohol proof black, adjustment heads in yellow.

**Case**—Of hard wood with polished finish; fitted with brass lock and key.

**Substage**—of FF6 and FF8—adjustable for focus by a quick-acting screw; consists of a mounting for the Abbe condenser and an iris diaphragm, which comes into the plane of the stage when the screw is turned up as far as possible, allowing the condenser to be used in immersion contact with the slide; condenser is provided with iris diaphragm beneath, thus giving two iris diaphragms with equipment; sub-stage is swung to the left of the optical axis when screw reaches the limit of motion downward; iris diaphragm is automatically locked against closing when condenser is in position.

**Note**—Microscopes F1 to F4 can be furnished with a substage ring and Abbe condenser, 1.20 N. A. in an iris diaphragm mounting at an additional cost of \$7.50. In the FF6 and FF8 outfits the sub-stage furnished is the regular quick-acting screw type. The above are the outfits regularly supplied. Prices on special outfits quoted on application.

No. 31708 FS2  
with stage iris diaphragm

These Microscopes offer the combined advantages of the Lever Fine Adjustment with the Side Wheel and Curved Arm

No. 31724 FFS8  
with regular quick acting screw substage

**MICROSCOPE, BAUSCH & LOMB CURVED ARM TYPE FS AND FFS with Lever Side Wheel Fine Adjustment.** This is a new microscope with side fine adjustment of the lever type, which is here used in conjunction with the curved arm made by Bausch & Lomb for many years. The principle is that of their original lever type of fine adjustment which has met the test of time and has been very generally adopted. The construction is simple and durable, giving a delicate movement for work with the highest powers, yet rapid enough for the lower powers. There is absolutely no tendency to wedge, and the adjustment has been tested in a manner equivalent to many years of use without showing wear or lost motion. This adjustment produces a vertical movement of the body tube of 0.25 mm for every complete rotation of the heads. It can be operated from either the right or left side of the arm, a turn of the fine adjustment heads always moving the body tube in the same direction, up or down, as a corresponding turn of the coarse adjustment heads. Positive stops denote the upper and lower limits of motion, and the adjustment ceases to operate when the objective comes in contact with the slide. An automatic take-up for wear is provided.

**Body Tube**—Provided with society screw thread; standard size eyepieces are used (23 mm diam.); draw tube graduated in single millimeters with every tenth line numbered, adjustable in lined sleeve or in metal fitting, if so specified, and provided with society screw thread.

**Focusing Adjustments**—Coarse adjustment by standard rack and pinion; fine adjustment of the lever type, with micrometer head on each side of arm; one complete revolution of the micrometer heads produces a vertical movement of the body tube of 0.25 mm.

**Stage**—Of metal, completely covered with vulcanized rubber except at point of contact with arm; measures 102 x 102 mm, with a distance of 76 mm from center to arm at stage surface (distance from optical center to extreme inner curve of arm, 83 mm); provided with spring clips. In the FS1 to FS4 Outfits the stage is provided with an iris diaphragm with mount having screw threads for attaching a substage ring to take an Abbe Condenser; the iris diaphragm being controlled by a knurled ring operated from any point of its circumference. With mechanical stage No. 22508 the entire surface of a slide, 50 x 75 mm, can be examined.

**Substage of FFS6 and 8**—Adjustable for focus by a quick-acting screw; consists of a mounting for the Abbe condenser and an iris diaphragm, which comes into the plane of the stage when the screw is turned up as far as possible, allowing the condenser to be used in immersion contact with the slide; substage is swung to the left of the optical axis when screw reaches the limit of motion downward; iris diaphragm is automatically locked against closing when condenser is in position, or against inserting condenser when upper iris is closed.

**Mirror**—Plane and concave, 50 mm in diameter; adjustable in two planes in a fork, mounted on a swinging arm provided with a stop for central illumination.

**Finish**—Lower parts, arm and body tube in alcohol-proof black; other parts in yellow.

**Case**—Of hard wood with polished finish; fitted with brass lock and key.

	Outfit	Objectives		Eyepieces	Nosepiece	Abbe Condenser	Price
		Dry	Immersion

Note.—Microscope FS1 to FS4 can be furnished with a substage ring with Abbe Condenser of 1.20 NA at an extra cost of \$7.50. Outfits FFS6 and FFS8 are provided with regular quick acting screw substage.

No. 31744 CASS  
With Complete Substage

These Microscopes offer the combined advantages of the Lever Fine Adjustment with the Side Wheel and Curved Arm.

No. 31764 CCS8  
With Complete Substage

**MICROSCOPES, BAUSCH & LOMB CURVED ARM TYPES CAS AND CCS with Lever Side Wheel Fine Adjustment.** These models are of the size and general construction of CAH and CCH and combine with these features the curved arm with lever side wheel fine adjustment as introduced in types FS and FFS.

**Base and Pillar**—Same as in CAH.

**Arm**—Long curved form of rectangular cross section with rounded edges.

**Body Tube**—Same as in CAH.

**Focusing Adjustment**—Coarse adjustment by rack and pinion; fine adjustment of new side wheel lever type with micrometer head on each side of arm, with drums graduated to read single microns of vertical movement. Index lines are provided on side of arm to show upper and lower limits of fine adjustment range.

**Stage of CAS**—Of metal covered with vulcanized rubber, 125 x 115 mm with a distance of 87 mm from center to base of arm. With spring clips.

**Stage of CCS**—Circular revolving, 125 mm diameter, with vulcanite top, centering screws and spring clips. Distance from center of stage to base of arm 87 mm. Interchangeable with large revolving mechanical stage.

**Substage**—Complete substage equipment with Abbe Condenser, as supplied with CAH, DDH, DHS, etc.

**Finish**—Main parts, including body tube, in alcohol proof black. Adjustment heads in yellow lacquer.

**Case**—Of hardwood with polished finish. With brass lock and key.

No. 31784—DDSS With Revolving Mechanical Stage and Complete Substage

**MICROSCOPE, BAUSCH & LOMB CURVED ARM TYPE DDS with Lever Side Wheel Fine Adjustment.** This Microscope is in size and finish identical with DDH but is here combined with the curved handle arm and lever side wheel fine adjustment previously introduced in FS and FFS. This Microscope, like the DDH, is provided with large body tube for photo-micrography and large revolving mechanical stage and is particularly designed for advanced work in research.

**Base**—Horse-shoe form; extra large.

**Pillar**—Double rectangular in section; provided with inclination joint and clamping lever to secure instrument in any position, and with stops in the vertical and horizontal positions.

**Arm**—Long, curved form, providing maximum space for manipulation of object.

**Body Tube**—Of brass, 50 mm outside diameter; provided with society screw thread; standard size eyepieces are used; draw tube graduated in single millimeters with every tenth line numbered, adjustable in cloth-lined sleeve, or in metal fitting, if so specified, and provided with a society screw thread; lower collar may be removed for attaching the Micro-Tessar, 72 mm objective.

**Focusing Adjustment**—Coarse adjustment by rack and pinion; fine adjustment of lever type, with micrometer head on each side of arm, one with drum graduated to read  $2\frac{1}{2}$  microns of vertical movement of body—index lines are provided on side of arm to show upper and lower limits of fine adjustment range.

**Stage**—Large mechanical, with centering heads; revolvable with clamping device to prevent rotation when desired; diameter 125 mm with a distance of 87 mm from its center to the base of arm, provided with two rack and pinion movements, covering a range of 75 mm and 50 mm respectively to make possible the examination of 3 in. x 2 in. slide from corner to corner; upper part of stage may be removed, leaving a large flat surface with one rack movement; entire mechanical stage removable for substitution of a plain revolvable stage.

**Substage**—Complete with swing-out condenser and so arranged that all substage accessories, inserted into the upper sleeve, may be easily employed; adjustable by standard rack and pinion; upper iris diaphragm of dome shape, self-locking, combined with Abbe condenser, the whole easily removable from substage; Abbe condenser removable from optical axis by a double swing movement to one side, releasing upper iris diaphragm for use; lower iris diaphragm adjustable laterally by rack and pinion for oblique illumination, revolvable about its own axis and mounted on a swinging arm, allowing it to be swung entirely out of the optical axis.

**Mirror**—Plane and concave, 50 mm in diameter; adjustable in a fork, attached in fixed position to substage support.

**Finish**—Main parts, including body tube, in alcohol proof black; adjustment heads in yellow.

**Case**—Of hard wood with polished finish; fitted with brass lock and key.

No. 31801—BHPs in Case

No. 31808

**MICROSCOPE, BAUSCH AND LOMB PORTABLE TYPE BHP.** This microscope is of the same general construction as the BBH but with folding stage and base to permit of convenient insertion in a small carrying case. It has been widely used for field work notably by the Rockefeller Sanitary Commission for the Eradication of the Hookworm to which we have supplied many instruments.

**Base**—V shaped, with hinge to permit parts to be folded together; stable with microscope at full inclination.  
**Focusing Adjustment**—Coarse adjustment by standard rack and pinion; fine adjustment of Bausch & Lomb lever type with double knurled micrometer screw head for slow and rapid movement, the larger part graduated into 100 divisions, each equal to .005 mm in vertical movement, and provided with a hinged indicator, which may be turned back from the head; fine adjustment ceases to operate when objective touches the slide.  
**Stage**—Of blackened metal, with vulcanized rubber top, measures 98 x 88 mm with a distance of 55 mm from its center to base of arm; provided with spring clips, mounted on a joint with clamp, permitting it to be turned in a vertical position for placing it in case and yet to be rigid when in a horizontal position for use.  
**Substage**—Adjustable for focus by a quick acting screw; consists of a mounting for the Abbe condenser and an iris diaphragm, which comes into the plane of the stage when the screw is turned up as far as possible, allowing the condenser to be used in immersion contact with the objective, if desired; substage is swung to the left of optical axis when screw reaches the limit of motion downward.  
**Finish**—Main parts including body tube in alcohol proof black, adjustment heads in yellow.  
**Case**—Of hard wood with polished finish; fitted with brass lock and key; outside dimensions, 284 x 192 x 83 mm (11¼ x 7½ x 3¼ in.).  
**Weight**—In carrying case, 10 lbs., 15 ozs.

**MICROSCOPE, BAUSCH AND LOMB DEMONSTRATION TYPE O.** This instrument enables an instructor to supplement his lecture work by showing a single object to an entire class. He has only to adjust the slide, focus the instrument and pass it around the class, the students pointing it to the light to make the observations. We have supplied this instrument also to a number of industrial establishments, such as manufacturers of safety razor blades for the convenient examination by workman of delicate parts during manufacture.

**Arm**—Handle type, of ample size.  
**Stage**—Of blackened metal, 100 x 83 mm, giving a distance of 42 mm from its center to arm, provided with spring clips and with small posts underneath to hold the instrument in a vertical position when not in use.  
**Focusing Adjustment**—Body tube slides in a cloth-lined spring tube; when properly focused, it may be secured by a small set screw above the handle.  
**Body Tube**—Fixed length, 160 mm; provided with society screw for regular microscope objectives; standard sized eyepieces are used.

No. 31816—With paired objective in position

No. 31816—With base and stage, glass removed

No. 31824—With body tube arranged horizontally

No. 31824—With body tube arranged vertically

**MICROSCOPE, BAUSCH & LOMB BINOCULAR, with image erecting prisms, paired oculars and objectives.**

The body tube with prisms is similar to that used in the Zeiss Binocular and the eye-pieces are adjustable for inter-pupillary distance. The base is readily removable as is the glass part of the stage in which arrangement the instrument may be used for a variety of purposes. The distinct improvement in this model is in the construction of the arm which permits the detaching of the curved portion from the sliding piece which carries the rack and also from the body tube proper. These features permit the quick increasing or decreasing of the working distance and also the almost universal application of the binocular body when used in connection with the large preparation stand and support. The stand for large preparations consists of a heavy base of horse-shoe form with a removable wooden stage.

**NEW BAUSCH & LOMB MICROSCOPES AND ACCESSORY APPARATUS**  
which were not ready for announcement at the time our catalogue went to press.

No. 31791

**Microscope, Bausch & Lomb New Portable Type APS**, as originally designed for field use by the International Health Commission in their work in the tropics. The fine adjustment is of the new side wheel lever type with micrometer head on each side of arm and exactly as described for Microscopes FS, FFS, etc. (see page 308). The stage remains in a horizontal position when the Microscope is put in the case, is covered with vulcanized rubber and measures 92 x 76 mm with a distance of 62 mm from center to base of arm. In the No. 8 outfit the regular quick acting screw substage with Abbe condenser and iris diaphragm is provided. Outfits APS 1, 2, 3 and 4 are not provided with the substage and Abbe condenser. They can be fitted with a substage ring with Abbe condenser and lower iris diaphragm at an additional cost of \$7.50. The two arms of the base fold inward on their own centers in the position as shown in illustration when the Microscope is put into the case. The weight of the No. 8 outfit, complete in polished hardwood case as shown in illustration, is 9 lbs., 8 oz., and the external dimensions of the case are 11½ x 6¼ x 4½ inches.

	Outfit	Objectives			Eyepieces	Nosepieces	Abbe Condenser	Price

31794.	APS 8	6 mm	4 mm	1.9 mm	5 x 10 x	Circular Triple		70.00

**Microscope, Bausch & Lomb New Portable Type BPS.** This Microscope differs principally from the preceding Type APS in that the folding base is provided with a hinged heel giving additional stability to the Microscope at full inclination and folding under when the Microscope is not in use. The stage also folds from the horizontal position as in use to the vertical position, as shown in the illustration, when the Microscope is put in the case. It is also covered with vulcanized rubber and measures 88 x 88 mm with a distance of 70 mm from center to base of arm. The side wheel fine adjustment is of the lever type previously described and the finish and other construction identical with other Bausch & Lomb standard Microscopes. The particular feature of this equipment is the small size of the case, i.e., 11¼ x 7¼ x 3¼ inches, and the light weight of the complete No. 8 outfit, 10 lbs. 5 oz.

No. 31834a

No. 31835b

**Microscope, Bausch & Lomb New Binocular Type KC**, consisting of binocular body KA with support arm mounted on a special support to clamp on the edge of table. As designed by Prof. J. H. Schaffner, of Ohio State University, for the observation of herbarium sheets. The advantages of this type of support for zoological work have been promptly recognized and the instrument is, therefore, offered complete with new support, and new support only for those who are already provided with the KA Binocular Microscope. The dimensions of the arm permit for working distance up to 195 mm, measuring from the lower edge of the nosepiece to table top. The optical equipment of tubes, etc., is identical with Binocular KA. For additional paired oculars and objectives for use with the binocular tube see page 312.

**31834. Clamp Stand KC 1**, with Microscope body KA without objectives or eyepieces but with case for body. . . . . **40.00**

**31834A. Clamp Stand KC 3**, same as above but with paired objectives, 10 mm, and paired eyepieces 10 x . . . . . **55.00**

**31834B. Clamp Stand KC** only. . . . . **5.00**

**31834C. Glass Plate**, heavy, square, with ground edges, 300 x 300 mm. . . . . **1.25**

**Microscope, Bausch & Lomb New Portable Binocular Type KP**. This is a binocular of the Greenough type exactly as described on page 312 but specially arranged for portability in that the binocular body and stage are completely detachable from the base which is provided with folding arms as in Portable Microscopes APS and BPS. An extraordinary range of working distance up to 155 mm is provided for measuring from the lower edge of the nosepiece to the stage and the entire supporting arm with body tube can be removed and used on Binocular Microscope Stand KB described on page 312, so that with one set of body tubes both a portable and laboratory outfit of this type KB is possible. The stage is of metal with large rectangular aperture provided with two removable plates 80 x 95 mm, one of metal and the other of transparent glass. The metal stage is provided with a metal plate allowing either clear aperture, white opaque, black opaque or ground glass illumination or background. The No. 5 outfit in carrying case weighs 11 lbs., 12 oz. and the case measures 9 x 13 x 3½ inches.

No. 31993

No. 32139

**31993. Comparison Eyepiece, Bausch and Lomb**, as suggested by Dr. Daniel J. Healy, of the Kentucky Agricultural Experiment Station, for the observation of two different objects side by side in the same field. The field is divided horizontally into halves as in the original form after Van Heurck in 1886 for comparing diatoms. Any two Microscopes with regular size draw tubes may be used. . . . . **25.00**

31994. **Pointer Eyepiece**, 10 x, with pointer for indicating special features in the field. Pointer is controlled by a small external lever..... 2.75
31995. **Diaphragm**, with projecting hair, for use with above, as suggested by Dr. W. J. G. Land, of the University of Chicago. May be also inserted in any regular standard eyepiece..... .50
32139. **Vertical Illuminator**, with two small square mirrors in place of the usual plane glass reflector and with a side tube carrying a condensing lens adjusted for focusing at light source. Two sizes of lenses are provided for interchangeable use, one for high and the other for low powers .... 12.00

No. 31835H

No. 24900

**Microscope, Bausch & Lomb New Binocular Type KD**, consisting of binocular body tube KA of the Greenough type with a special prism system added which makes possible the use of any of the achromatic objectives up to 1.9 mm oil immersion. When a single objective is used one image merges with the other and the subject is seen erect and not transposed. Stereoscopic effect is obtained by suitable adjustment of the pupillary distance. The removal of the prism system with nosepiece and regular achromatic objectives as shown in illustration permits the use of the same stand and body tubes with the regular paired objectives as supplied with Binocular Microscope KA. The focusing adjustment is of the side wheel lever type and the stage measures 102 x 102 mm with distance of 85 mm from center of arm at stage surface. Finish and construction otherwise identical with Bausch & Lomb standard. For prices of paired objectives used on this stand see page 312.

No. 31848—Showing base opened

# MICROSCOPE, BAUSCH AND LOMB CHEMICAL TYPE M.

Constructed after the specifications of Dr. E. M. Chamot of Cornell University, and is designed for work in all branches of Micro-Chemistry and in commercial laboratories, being admirably adapted for the examination of foods and drugs as well as chemicals. High power objectives may be used with it, but a small cover glass should be cemented with pure glycerine to the front of even low powers to prevent damaging from contact with reagents. Bausch & Lomb quick changing nosepiece is regularly listed with this instrument, as it is desirable under ordinary conditions to have but one objective on the stand at once. The instrument is of the Handle Arm Type with lever fine adjustment similar in appearance to the BBH except for the revolving stage.

**Stage**—Circular revolving with knurled edge, graduated on circumference in single degrees, with every tenth line numbered, and read by a conveniently placed pointer; measures 88 mm outside and 78 mm inside graduations, with a distance of 58 mm from center to base of arm; has vulcanite top and is provided with spring clips and centering screws.

**Analyzer**—Consists of a Thompson prism mounted in a revolving collar graduated in two-degree divisions with every tenth line numbered; collar revolves smoothly in cylindrical mounting fitting over draw tube and is slotted to engage stud for zero point; can be easily removed for insertion of microscope eyepiece.

**Polarizer**—Consists of a high grade Nicol prism mounted with a revolving ring graduated in two-degree divisions, with every tenth line numbered, and having an indicating pointer; entire mounting securely supported in substage and fixed for zero point by stud which engages corresponding slot.

**Finish**—Entire instrument neatly finished in durable black.

**Case**—Of hard wood with polished finish; fitted with brass lock and key.

# MICROSCOPES, BAUSCH AND LOMB DISSECTING, TYPES U, W AND Y.

These three types of dissecting Microscopes are supplied in varying outfits as given in the price list below or in special outfits as may be required. The specifications of the stands are as follows with a list of regular equipment and prices:—

- Type U.**—**Focusing Adjustment**—By means of sliding post in pillar, with knot; range, 47 mm.  
**Stage**—Glass, 80 x 66 mm, removable, second set of grooves beneath stage for black and white metal plate, supplied for use as opaque background; spring clips attached to stage support; hand rests may be attached to edges of support.  
**Type W.**—**Focusing Adjustment**—By standard rack and pinion, with a knurled head on either side, giving a range of 60 mm.  
**Hand Rests**—Of metal, neatly covered with leatherette, 95 mm in length and detachable.  
**Lens Arm**—Jointed so that the entire field of stage can be covered; maximum distance from center of pillar to center of lens, 90 mm; arm may be removed for substitution of erecting body; extra removable support provided for attachment of Abbe Camera Lucida, which may be raised or lowered to get full field of view.  
**Type Y.**—**Focusing Adjustment**—By standard rack and pinion, with knurled head on either side; range, 60 mm.  
**Stage**—Plate glass, 90 x 80 mm, removable; second set of grooves beneath stage for black and white metal plate, supplied for use as opaque background; extra long, spring clips attached to stage support; holes for hand rests in edges of stage support.  
**Hand Rests**—Mahogany, 160 mm long, attached to edges of support and steadied by metal frames; detachable but included in outfits

No. 32028

**MICROSCOPE ACCESSORIES, BAUSCH AND LOMB.**

**Objectives**—The 4 mm ( $\frac{1}{4}$  in.) objective is supplied in two types of different N. A. The 0.65 N. A. is distinguished by an extraordinarily long working distance, which enables the objective to focus easily through the thickest cover-glass of the Thoma-Zeiss Haemacytometer.

The 4 mm objective of 0.85 N. A., with less working distance and less depth of focus than the 0.65 N. A. type has the advantage of greater resolving power.

	B and L Catalog Number	Equivalent Focus		Numerical Aperture	Working Distance	Micrometer Values with 6.4 × Ocular	Price
		Millimeters	Inches				
31944.	1005	48	2	0.08	53	0.087 = 87 μ	4.00
31948.	1009	32	1 1/2	0.10	38	0.044 = 44 μ	4.00
31952.	1021	16	3	0.25	7.0	0.018 = 18 μ	5.00
31956.	1027	8	6	0.50	1.6	0.0085 = 8.5 μ	8.00
31960.	1029	4L	12	0.65	0.6	0.0040 = 4.0 μ	8.00
31964.	1031	4S	12	0.85	0.3	0.0040 = 4.0 μ	8.00
31968.	1035	3	16	0.85	0.2	0.0029 = 2.9 μ	8.00
31972.	1041	1.9	1 1/8	1.30	0.15	0.0018 = 1.8 μ	27.00

**Oculars**—The Huyghenian Oculars are of 23 mm outside diameter and are interchangeable with all modern European oculars such as Zeiss, Leitz, etc. If oculars are ordered for the old American size, i. e., 25 mm outside diameter, this fact must be stated in ordering.

**Approximate Equivalent Focus**

B and L Catalog Number	Magnifying Power	Equivalent Focus		Price
		Millimeters	Inches	
31976.	1100	5 $\times$	2	1.50
31980.	1101	6.4 $\times$	40	1.50
31984.	1102	7.5 $\times$	33	1.50
31988.	1104	10 $\times$	25	1.50
31992.	1106	12.5 $\times$	20	1.50

**Substage Condensers**—The usual Abbe Condensers are neither chromatically nor spherically corrected, but for all ordinary work serve their purpose very well. Their function is to send light through the object under an angle sufficiently large to fill the aperture of the objective with light. They are furnished in two numerical apertures: 1.20 N. A., containing two lenses, and 1.40 N. A. containing three lenses. The Aplanatic Condenser 1.40 N. A., consists of three lenses—an over hemispherical, a meniscus and a double convex, which has a spheroidal surface for correcting the spherical aberration. The spherical correction obtained in this way is of the highest degree and perfect for all zones of the condenser, a result that has not been reached by any other construction. The lenses are separable, and the condenser, with the upper lens removed, gives a numerical aperture of 0.60; with both lenses removed, one of 0.40. The quality of correction in each case is of the same high order as that of the complete combination.

The Achromatic Condensers are corrected for two colors and spherically corrected for two zones. They are recommended for work where it is essential that a sharp image of the light source, free from color fringes, be projected into the plane of the object. The iris diaphragm is located between the lenses.

B and L Catalog Number	Designation	Numerical Aperture	Equivalent Focus		Slide Thickness	Price
			Millimeters	Inches		
31996.	1740	Abbe Condenser	1.20	12.0	0.80	7.50
32000.	1742	Abbe Condenser	1.40	8.7	1.90	9.00
32004.	1743	Aplanatic Condenser	1.40	12.0	2.00	22.50
32008.	4535	Achromatic Condenser	1.00	12.0	1.90	25.00
32012.	4537	Achromatic Condenser	1.40	13.0	0.90	30.00

**Dark-Field Condensers**—This Condenser is interchangeable with the Abbe Condenser, and can be applied to any Bausch & Lomb Microscopes fitted with either the screw or the complete substage. It consists of a reflector so constructed that the rays are made to strike the object at oblique angles, corresponding to numerical apertures between 1.00 and 1.40, allowing only those rays to reach the eye which are diffracted by the object. The result is that a dark field is produced in which objects appear brilliantly illuminated. Objectives having numerical apertures between 1.00 and 1.40, such as the oil immersion 1.30 N.A., must be provided with a funnel stop, when used with this condenser, in order to reduce the numerical aperture to less than 1.00. For successful operation a powerful light source is required. See discussion under Micro Lamps. Printed directions are enclosed with each illuminator. In centering mount with iris diaphragm... 11.00

32020.	Funnel Stop for oil immersion objective, when used for dark field.	40

32092. **Micro Drawing Apparatus**, a new and convenient arrangement for the use of an ordinary Microscope in drawing; suitable for use with powers from 50 to 430 diameters. The standard image distance of 10 inches being fixed, the pencil is operated with the eye at its normal reading distance, an important feature where much work is to be done. Outfit includes drawing board, mirror, hand feed arc lamp and rheostat for 110 volts, 4 amperes, with plug and cord but without microscope. . . 25.00
32096. **Drawing Board**, only, with support for the microscope, clamp and light shield. . . 3.50
32100. **Mirror**, only, with clamp for draw tube. . . 2.50
32104. **Micro Drawing Apparatus**, similar to above in operation but with adjustable support for the microscope, permitting alterations of the projection distance between mirror and paper. With drawing board, mirror, hand feed arc lamp and rheostat for 110 volts, 4 amperes, but without microscope. . . 27.50
32108. **Adjustable Drawing Board**, only, with support for the microscope, clamp and light shield. . . 6.00
32112. **Polarizer**, for use interchangeably with an Abbe condenser in the substage; with one selenite. . . 12.00
32116. **Polarizer**, same as No. 32112, but with three interchangeable selenites mounted in metal rings. . . 15.00
32120. **Analyzer**, for use with either of the above Polarizers for attaching to the microscope immediately above the objective. . . 10.00
32124. **Analyzer**, for attaching to draw tube above the ocular; with graduated disc to measure angle. . . 15.00
32128. **Turn-Table**, for ringing mounts and making cells. . . 4.00
32132. **Bulls-Eye Condenser**, for the illumination of opaque objects and to secure parallel beam from artificial sources of light. On adjustable stand.  
Diameter of lenses, mm. . . 38 56 75  
Each. . . 3.00 5.00 7.00
32136. **Vertical Illuminator**, for illuminating opaque objects, particularly metal surfaces; for attaching immediately above the objective. . . 6.50
32138. **Vertical Attachment**, new form, with bulls-eye condensing lens and iris diaphragm attachment. . . 15.00

We have found it difficult to comprehensively and clearly present the two makes of Microscopes and Accessories (Bausch & Lomb and Zeiss) in the space at our disposal in this catalogue. We believe those familiar with Microscope equipments will find no difficulty in securing the information necessary to the selection of outfits from the material listed on these pages but we emphasize our desire to send upon application the original catalogues of both Carl Zeiss and Bausch & Lomb Optical Co. with such additional and more specific information as we have gathered in an experience of over twenty years in the sale of Microscopes.

No. 32156—Stand III CA with Triple Nosepiece, Ocular and Objectives

**MICROSCOPE, ZEISS STAND III.** This is the most widely used of the new series of Zeiss Microscopes with handle arm and Berger fine adjustment. It is identical with Stand I with the exception of large body tube and the finish of the base which in Stand III is of crystallized lacquer instead of smooth black. For all ocular observations, therefore, this stand meets the requirements of the most refined investigations but is not recommended for a wide range of use in photo-micrography and micro-projection because of the narrow or standard tube. Special attention is called to the four types of stages furnished as regular equipment with this outfit. With the exceptions above noted this stand is identical in finish and mechanical adjustments to Stand I.

**Fine Adjustment**—By Berger slow motion with side wheel, first introduced by Zeiss in 1898.

**Stages**—The fixed round stage furnished as regular equipment with Stand IIIC is 11 cm in diameter. The simplified mechanical stage furnished as regular equipment with Stand IIICA is a non-revolving stage fitted with a movable plate giving a backward and forward movement by operating two screws jointly and a transverse motion by operating the same screws in opposite directions, with a range of displacement of 10 mm. This has been found a great convenience and for many purposes as satisfactory as the large mechanical stage. This simplified mechanical stage is also arranged as a revolving stage furnished as regular equipment for Stand IIICB. The plain revolving and centering vulcanite stage furnished as regular equipment with Stand IIID is the same as supplied with Stand IA and the large revolving mechanical stage supplied as regular equipment to Stand IIIE is the same as supplied with Stand IB. All of these stages are interchangeable and can be supplied as accessory equipment after the purchase of the regular microscope.

**Illuminating Apparatus**—These Stands are all furnished with the complete Abbe Illuminating Apparatus with Abbe condenser system of 1.40 N.A. as regular equipment. For very refined work we particularly recommend the addition of aplanatic condensing system of 1.40 N.A. or the achromatic centering condenser of 1.00 N.A.

The Stands are all furnished in fine polished mahogany cases and prices do not include oculars, nosepieces or objectives. For price on Complete outfits see page 323.

No. 32170

32170. Swingout Condenser Mounting, for Abbe Condenser of 1.40 N. A. If ordered with Stands IA, IB, IIC, IIIC, IIID, or IIID, extra  
 Duty Free ..... 6.25      Duty Paid ..... 7.75

Note.—The Aplanatic Condenser of 1.40 N. A. as furnished on Stand IC is not adaptable to the swingout mounting.

**REVOLVING STAGES, ZEISS.** The Plain Revolving Vulcanite Stage as well as the Large Revolving Mechanical Stage may be ordered separately at any time for use with both Stands I and III or may be ordered as additional accessories at the prices given below.

32172. Plain Revolving Vulcanite Centering Stage, only  
 Duty Free ..... 6.25      Stock ..... 7.75
32176. Large Mechanical Revolving Stage, with center housing.  
 Duty Free ..... 25.00      Stock ..... 31.00
32180. Center Housing, for use with plain revolving vulcanite stage or large mechanical stage.  
 Duty Free ..... 4.25      Duty Paid ..... 5.27

**SUBSTAGE CONDENSERS, ZEISS.** The following Condensers all fit interchangeably into the upper sleeve of the complete Abbe Illuminating Apparatus. In the series of Stands I and III previously listed we have included Condensers in the price but here list them separately with additional systems for special work for ready reference in making up the prices of special outfits.

32184. Abbe Condenser, three lens system, 1.40 N. A., equivalent focus 8 mm.  
 Duty Free ..... 6.25      Stock ..... 7.75
32188. Aplanatic Condenser, 1.40 N. A., equivalent focus 10 mm, particularly recommended for photomicrography with high power objectives of wide aperture.  
 Duty Free ..... 15.00      Stock ..... 18.60

Note.—The front lens of both the preceding Condensers may be removed and the remaining lenses used as a long focus Condenser of small aperture work. When the complete set is used with objectives of large aperture the Condenser should be used in immersion contact with the slide.

32192. Centering Achromatic Condenser of 1.0 N. A., equivalent focus 14 mm. This condensing system has an iris diaphragm mounted between the lenses and the iris diaphragm of the Abbe Illuminating Apparatus should, therefore, remain opened when this condenser is used. This Condenser is recommended for the most refined investigations in both ocular and microphotographic observations with objectives up to 1.0 N. A. and for best results should be used in immersion contact with the slide.  
 Duty Free ..... 18.75      Stock ..... 23.25
32196. Condenser, Quartz, of 1.30 N. A. with interchangeable upper part reducing the aperture to 0.8. For use in work with the Ultra-Violet as in the Luminescence Microscope.  
 Duty Free ..... 17.50      Stock ..... 21.70
32200. Condenser, Paraboloid, for dark field illumination.  
 Duty Free ..... 10.00      Stock ..... 12.40
32204. Paraboloid Stops, for Zeiss Achromatic Objectives DD, E, F, J and 1/16 inch and Apochromatic Objectives of 4 mm focus and less.  
 Duty Free ..... .25      Stock ..... .31

Note.—For best results in dark field illumination with the Zeiss Paraboloid Condenser, Arc Lamp No. 32848 page 331 or Nernst Lamp are recommended. The Condenser should be used in immersion contact with the slide, care being taken to avoid air bubbles. With all dry objectives of moderate power dark field illumination is obtained by total reflection at the cover glass. With dry objectives of high power and all oil immersion objectives a stop must be introduced into the objective mount in order to reduce the aperture of the objective to about 0.8. This stop is indispensable with immersion objectives of over 1.0 N. A. since dark ground illumination is produced in them not by total reflection at the surface of the cover glass but exclusively from the illumination of apertures above 1.0 N. A. The very considerable reduction of aperture of immersion objectives which is thus necessary to secure proper dark field illumination reduces their resolving power to such an extent as to make it advisable to use the higher power dry objectives wherever possible. The Paraboloid stops for the objectives are furnished without charge when both condenser and objective are ordered at the same time.

**OCULARS, ZEISS.** Huyghenian or Orthoscopic Oculars should never be used with Apochromatic Objectives as they are computed only for use in connection with the achromatic systems. The Compensating Oculars, on the other hand, may be satisfactorily used with Achromatic Objectives of considerable aperture, i.e., 0.5 N. A. and upwards or, in other words, with Achromatic Objectives DD, E, F and 1/16 inch Oil Immersion. The two new Orthoscopic Oculars are recommended for use with Achromatic Objectives where high magnification with large field of view is required. As in the case of Compensating Oculars they permit the use of the eye at a very comfortable distance above the eye lens with the entire field in view.

# COMPLETE ZEISS MICROSCOPE OUTFITS

With the preceding information as to Zeiss stands, stages and condensers and the optical data and prices of oculars and objectives, complete Zeiss outfits can be made up to meet all requirements. For the convenience of customers we list below commendable outfits on the basis of Stands I and III with both achromatic and apochromatic equipment.

## 32348. Apochromatic Outfit on the basis of Stand IA, i. e., with plain revolving vulcanite stage.

	Duty Free	Stock
Stand IA, with Abbe condenser of 1.40 N. A. and plain revolving vulcanite stage.....	81.25	100.75
Triple Revolving Nosepiece.....	5.00	6.20
Compensating Ocular 6.....	5.00	6.20
12.....	7.50	9.30
Apochromatic Objective, 16 mm.....	20.00	24.80
4 mm.....	35.00	43.40
2 mm.....	75.00	93.00
1.30 N. A.....	228.75	283.65

## 32352. Apochromatic Outfit on the basis of Stand IC

	Duty Free	Stock
Stand IC with aplanatic condenser of 1.40 N. A. and special stage and accessories for micro-photography.....	112.50	139.50
Tube Slide for interchanging objectives.....	2.00	2.48
3 Objective slides.....	6.00	7.44
Compensating Ocular 6.....	5.00	6.20
12.....	7.50	9.30
Apochromatic Objective, 16 mm.....	20.00	24.80
4 mm.....	35.00	43.40
2 mm.....	75.00	93.00
1.30 N. A.....	263.00	326.12

## 32356. Achromatic Outfit on the basis of Stand III-CA.

	Duty Free	Stock
Stand III-CA, with simplified mechanical stage and Abbe condenser of 1.40 N. A.....	66.25	82.15
Triple Revolving Nosepiece.....	5.00	6.20
Huyghenian Ocular 2.....	1.50	1.86
4.....	1.50	1.86
Achromatic Objective A.....	5.00	6.20
D.....	8.75	10.85
1-12" Oil.....	25.00	31.00
Immersion 1.25 N. A.....	113.00	140.12

## 32360. Apochromatic Outfit on the basis of Stand IB, i. e., with large revolving mechanical stage

	Duty Free	Stock
Stand IB, with Abbe condenser of 1.40 N. A. and large revolving mechanical stage.....	100.00	124.00
Triple Revolving Nosepiece.....	5.00	6.20
Compensating Ocular 6.....	5.00	6.20
12.....	7.50	9.30
Apochromatic Objective, 16 mm.....	20.00	24.80
4 mm.....	35.00	43.40
2 mm.....	75.00	93.00
1.30 N. A.....	247.50	306.90

## 32364. Apochromatic Outfit on the basis of Stand III-CA

	Duty Free	Stock
Stand III-CA with simplified mechanical stage and Abbe condenser of 1.40 N. A.....	66.25	82.15
Triple Revolving Nosepiece.....	5.00	6.20
Compensating Ocular 6.....	5.00	6.20
12.....	7.50	9.30
Apochromatic Objective, 16 mm.....	20.00	24.80
4 mm.....	35.00	43.40
2 mm.....	75.00	93.00
1.30 N. A.....	213.75	265.05

## 32368. Apochromatic Outfit on the basis of Stand III-E with large revolving mechanical stage.

	Duty Free	Stock
Stand III-E with large revolving mechanical stage and Abbe condenser of 1.40 N. A.....	91.25	113.15
Triple Revolving Nosepiece.....	5.00	6.20
Compensating Ocular 6.....	5.00	6.20
12.....	7.50	9.30
Apochromatic Objective, 16 mm.....	20.00	24.80
4 mm.....	35.00	43.40
2 mm.....	75.00	93.00
1.30 N. A.....	238.75	296.05

No. 32120

## 32380. Microscope, Zeiss Traveling Stand IV, a new and compact Microscope with 80 mm rectangular stage, substage condenser of 1.0 N. A. in a strong, well protected canvas carrying case designed especially for use in the tropics, but without oculars, nosepiece, objectives or accessories shown in illustration.

Duty Free.....	42.50	Duty Paid.....	52.70
32384. Accessories, as shown in illustration, consisting of forceps, scalpel, scissors, dissecting needles, etc.			
Duty Free.....	2.25	Duty Paid.....	2.79

## 32372. Portable Outfit, on the basis of Stand IV.

	Duty Free	Duty Paid
Zeiss Traveling Stand IV, as above.....	42.50	52.70
Double Nosepiece.....	3.75	4.65
Huyghenian Ocular 2.....	1.50	1.86
Achromatic Objective A.....	5.00	6.20
D.....	8.75	10.85
	61.50	76.26

## 32376. Portable Outfit, on the basis of Stand IV, complete for bacteriological work.

	Duty Free	Duty Paid
Zeiss Traveling Stand IV, as above.....	42.50	52.70
Triple Revolving Nosepiece.....	5.00	6.20
Huyghenian Ocular 2.....	1.50	1.86
Achromatic Objective A.....	5.00	6.20
D.....	8.75	10.85
1-12 inch.....		
1.25 N. A.....	25.00	31.00
	89.25	110.67

No. 32396 with No. 32400

No. 32416

No. 32404

No. 32452

Zeiss Microscope Accessories

		Duty Free	Stock
32388.	Triple Revolving Nosepiece.....	5.00	6.20
32392.	Double Revolving Nosepiece.....	3.75	4.65
32396.	Sliding Objective Changer, Tube Slide recommended for microphotographic work on account of accurate centering.....	2.00	2.48
32400.	Sliding Objective Changer, Objective Slide. One for each Objective.....	2.00	2.48
32404.	Large Abbe Drawing Camera, in case.....	15.00	18.60
32408.	Vertical Illuminator, prism form.....	4.50	5.58
32412.	" " " " with iris diaphragm.....	9.50	11.78
32416.	Drawing Table, Bernhard.....	13.00	16.12
32420.	Ocular Micrometer, 10 to 100.....	1.88	2.33
32424.	" Contrast Micrometer, 5 mm, consisting of 50 squares in 0.1 and .05 mm.....	2.50	3.10
32428.	" " " " 10 mm " " 25 " in .4 and .2 mm.....	2.50	3.10
32432.	" Screw Micrometer with Ramsden ocular for use with achromatic objectives.....	22.50	27.90
32436.	Ocular Screw Micrometer with compensating ocular No. 6, for use with apochromatic objectives.....	26.25	32.55
32440.	Stage Micrometer, consisting of 3 mm divided into $\frac{1}{10}$ mm and $\frac{1}{50}$ mm divided into $\frac{1}{100}$ mm.....	2.13	2.64
32444.	Abbe Apertometer for measuring the numerical aperture of micro objectives.....	17.50	21.70
32448.	Microspectral Objective, Engelmann. See <i>Bol. Zeit.</i> 40, 419-426, 1882 and <i>Pflüger's Arch. f. d. ges. Physiol.</i> 27, 485-490, 1882.....	42.50	52.70
32452.	Spectral Ocular, Abbe (Microspectroscope).....	50.00	62.00
32456.	Maltwood Finder.....	5.00	6.20
32460.	Ocular, Abbe Stereoscopic, by the use of which any of the Zeiss Stands may be converted into a binocular microscope for use with any powers. The attachment is adjustable for the inter-pupillary distance of the observer and should be used with achromatic objectives only. Its use with a revolving nosepiece or with apochromatic objectives is not recommended.		
	Duty Free.....	45.00	
	Duty Paid.....		55.80

No. 32464

No. 32468

# **MICROSCOPE, ZEISS BINOCULAR STAND X, with image erecting prisms, paired oculars and objectives.**

This is the original Binocular Microscope giving true stereoscopic vision and which has not only come into wide use of recent years but has been widely copied by other makers. The regular outfit includes the stage and base and the vulcanite fork for attaching when the Microscope is used with the stage and base as a Dermatoscope, as shown in upper right hand corner of illustration. It is also furnished as Stand XB, with rack and pinion elevating motion with extension arm with joint, which arrangement has found much favor with geologists, mineralogists, botanists and zoologists. A lower priced form of this stand is now offered for the first time as Stand XB, Simplified Model. Where one pair of binocular tubes is to be used on both Stand XA and XB, the tubes should be ordered as a part of the Stand XB outfit after which they can be used on the stage and base of Stand XA by means of the Straight Support No. 32476. This Support is also necessary when the Drüner Stereoscopic Camera is used in connection with Stand XA.

		Duty Free	Stock
32464.	<b>Zeiss Binocular Stand XA</b> , with base, stage, hand rests for dissecting and vulcanite fork for use with the body tube as Dermatoscope, without objectives or oculars, in mahogany case.....	48.75	60.45
32468.	<b>Dermatoscope</b> , consisting of the upper part of Stand XA with the vulcanite fork but without stage and base and also without objectives and oculars, in case.....	33.25	41.23
32472.	<b>Vulcanite Fork</b> , only, for Dermatoscope.....	1.50	1.86
32476.	<b>Straight Support</b> , for use when the Drüner Stereoscopic Camera is to be used with Stand XA and also when the binocular body of Stand XB is to be used interchangeably on stage and base of Stand XA.....	2.50	3.10
32480.	<b>Zeiss Binocular Stand XB</b> , on heavy base, with rack and pinion vertical motion and extension jointed arm, without objectives or oculars, in mahogany case.....	65.00	80.60
32484.	<b>Zeiss Binocular Stand XB</b> , simplified model, as shown in illustration, without objectives or oculars, in mahogany case.....	40.00	49.60
32486.	<b>Adapter</b> , necessary for occasional use because it is impossible in either form of Stand XB to lower the tube sufficiently to focus on the plane of the table top or desk on which the base of the stand rests. If this feature is unnecessary this adapter need not be ordered.....	3.75	4.65

No. 32480

No. 32484

No. 32496

No. 32500

**Note**—Outfits involving the use of Stands XA and XB may be made up by ordering the paired oculars and objectives listed below. For the convenience of those wishing either a simple or a complete outfit we list two outfits on the basis of Stand XA as follows:—

32488. **Binocular Outfit**, on the basis of **Stand XA** giving a range of magnification from 9 to 40 diameters, with fields from 13 to 3.3 mm in diameter.

	Duty Free	Stock
Zeiss Binocular Stand XA .....	48.75	60.45

No. 32512—with 32516 and Brucke Combination 31024

No. 32512 with 32536

**MICROSCOPE, DISSECTING, MEYER-ZEISS**, a large dissecting microscope of almost universal application with the great variety of accessories offered; particularly recommended for use with the Binocular body, but may be fitted with simpler magnifiers such as the Anastigmatic No. 31024, the Brucke dissecting combination or with either the monocular or binocular compound microscopes, as on Zeiss stands XA, XB, XC or XI.

		Duty Free	Duty Paid
32512.	<b>Dissecting Stand</b> with adjustable mirror and light modifying device, stage measuring 3 x 6 inches, round stage opening $4\frac{1}{4}$ inches in diameter, brass disc and plate glass disc to fit the stage opening, two arm rests, and holder fitted with rack and pinion for magnifiers and composite dissecting lenses.....	24.50	30.38
32516.	<b>Idlto</b> , with simple sliding lens holder.....	17.50	21.70
32620.	<b>Cabinet</b> for the stand, of alderwood.....	3.00	3.72
32524.	<b>Round Foot</b> rendering the lens holders available for use as lens stands independently of the dissecting microscope.....	1.75	2.17
<b>Note</b> —The stand of the new dissecting microscope may be use in conjunction with the body of the binocular microscope X b, the Drüner camera, the body of the erecting microscope X 1, as well as a single tube similar to that of Stand IX. For this purpose we supply a yoke attachment of two patterns:			
32528.	<b>Yoke with Slide Carriage</b> for giving a traversing motion of the microscope body, with two fixing screws.....	6.75	8.37
32532.	<b>Yoke</b> without Traversing Slide Carriage, with two fixing screws.....	2.75	3.41
<b>Note</b> —The various Bodies which may be attached to the yoke are subject to the following prices:—			
32536.	<b>Body of the Binocular Microscope Xb</b> .....	27.50	34.10
32540.	<b>Drüner Stereoscope Camera</b> .....	35.00	43.40
32544.	<b>Pillar Bracket</b> for the attachment to the yoke of the camera or the body of Stand Xb.....	2.50	3.10
32548.	<b>Pillar Bracket</b> for the attachment of the body of Stand Xb in an inclined position.....	2.00	2.48
32552.	<b>Body of the Single-tube Erecting Microscope X1</b> with exceptionally large radial extension.....	18.75	23.25
32556.	<b>Body</b> similar to that of the Single-tube Stand X1.....	7.50	9.30
<b>Note</b> —The following parts are required to render the stand available for use as a ball stage microscope:			
32560.	<b>Ball Stage</b> to drop into the stage opening.....	3.75	4.66
32564.	<b>Raising Block</b> for attachment between the yoke and the pillar bracket, with two long fixing screws.....	1.88	2.33
32568.	<b>Drawing Apparatus</b> for use with the Mayer Dissecting Microscope.....	31.25	38.75

No. 32674—Luminescence Microscope

**MICROSCOPE, LUMINESCENCE, ZEISS.** This apparatus consists of an ordinary Microscope Stand as used for other work, with Achromatic or Apochromatic Objectives and either Huyghenian or Compensating Oculars, and differs only in the illuminating apparatus and source of light. In order that the illuminating apparatus permit the radiation of the object with ultra-violet light, which causes the luminescence, it is essential that the object slide as well as the condenser system be of quartz, which is permeable for the ultra-violet ray, exactly as is required in the micro-photographic outfit for ultra-violet light. The source of light may be either an arc lamp with specially prepared carbons or a Quartz Mercury Vapor Lamp, both of which are rich in ultra-violet rays. A collector condensing system of quartz lenses is also necessary. Light, particularly of wavelength visible to the eye, must be cut out by means of ultra-violet filters in order that the object may be examined solely in the fluorescent light originating from it under the action of the ultra-violet ray. The Lehmann filter with the additional filters of blue Uviol glass provides this feature. The illustration shows the outfit complete with Zeiss Microscope Stand III in position and the hand regulating arc lamp, but with the diaphragm removed to better display the remaining parts. For more detailed description send for a copy of Zeiss *Micro 325*. The component parts of the equipment with individual prices are as follows:

	Duty Free	Duty Paid
32572. Base Board, with optical bench 70 cm long.....	8.75	10.85
32576. Diaphragm Arrangement.....	5.00	6.20
32580. Blue Uviol Glass Disc, 6 cm diameter, on support.....	7.00	8.68
32584. UV Filter, 6 cm diameter, on support.....	17.00	21.08
32588. Wash Bottle, for filling and emptying the UV Filter.....	.69	.85
32592. Quartz Condensing Lens, plano-convex, 6 cm in diameter, on support.....	13.25	16.43
32596. Support for microscope with quartz prism.....	12.50	15.50
32600. Quartz Substage Condenser with iris diaphragm.....	17.50	21.70
32604. Centering Device for above.....	3.00	3.72
32608. Uranium Glass Plate, with circular ring for centering.....	2.00	2.48
32612. Plane mirror in mounting, for the convenient observation of the uranium glass centering plate.....	.38	.47
32616. Micro Slide of Quartz, 0.5 mm thick, 25 x 30 mm.....	1.13	1.40
32620. Cover Glass, of Euphos glass, 0.17 to 0.20 mm thick, 12 mm in diameter.....	.25	.31
32624. Object Carrier, Heidenhain, for the convenient manipulation of the quartz slides.....	.50	.62
32628. Hand Regulating Arc Lamp, for 10 amperes.....	13.50	16.74
32632. Carbons, special, impregnated with nickel, per 50 pairs.....	1.75	2.17
32636. Quartz Condensing Lens, consisting of two plano-convex lenses of quartz, 4 cm in diameter, on support.....	10.75	13.33
32640. Rheostat, for 110 volts, alternating or direct current, for either 5 or 10 amperes.....	8.00	9.92
32644. Rheostat, for 220 volts, alternating or direct current, for either 5 or 10 amperes.....	10.63	13.18
Note—As an alternative to the Arc Lamp above listed the Quartz Mercury Vapor Lamp may be used as a source of light as follows:—		
32648. Quartz Mercury Vapor Lamp.....	32.50	40.30
32652. Light Box for above.....	27.50	34.10
32656. Quartz Condensing Lens, similar to above, but consisting of a meniscus and plano-convex lens of 4 cm diameter, on support.....	12.00	14.88
32660. Rheostat for 110 volts direct current.....	10.00	12.40
32664. Additional Rheostat making above available for 220 volts direct current.....	6.25	7.75
32668. Extra Quartz Lamp, only, for replacement.....	11.25	13.95
32672. Microscope, Zeiss Stand IIIDQ as shown in illustration and specially designed for this outfit.....	60.00	74.40
32674. Complete Luminescence Outfit with Arc Lamp as above with rheostat for 110 volts.....	282.45	350.23
32675. Complete Luminescence Outfit with Arc Lamp as above with rheostat for 220 volts.....	285.08	353.49

**ULTRA-MICROSCOPE, ZEISS CARDIOID CONDENSER TYPE.** The Cardioid Microscope as devised by Siedentopf is designed for bringing into view ultra-microscopic particles by means of a simplified attachment (the cardioid condenser) providing a remarkable light concentrating power. By this arrangement the rays of high aperture are employed to illuminate the object, while those of low aperture reach the eye. The difficulty occasioned by the presence of surface impurities, the maintenance of a stratum of the correct thickness and the absorbing properties of the ultra-microscopic particles have been avoided by the use of a suitably designed chamber. The Cardioid Ultra-Microscope is primarily adapted for the examination of colloid solutions, diluted precipitates and for the observation of micro-chemical and photo-chemical reactions. Where a suitable microscope and source of light are already available it is only necessary to provide the Special Equipment. In the illustration the Cardioid Condenser is shown in position on Zeiss Stand III equipped with the special apochromatic 3 mm objective with centering appliance, Cardioid Condenser in position on substage and quartz chamber in position in its holder on the stage, with the water cooling cell and arc lamp in position. *For more detailed description send for Zeiss Mikro 306.*

| 32688. | Cardioid Condenser, only. <b>Duty Free</b> .....   | 10.00  | <b>Duty Paid</b> ..... | 12.40  |

**ULTRA-MICROSCOPE, ZEISS SLIT TYPE,** an improved arrangement of the Siedentopf and Zsigmondy apparatus originally announced in 1904 and which by the orthogonal arrangement of the direction of illumination and observation and the micrometrically alterable thickness of the illuminating beam in relation to the depth of definition of the objective, entirely removes the powerful absorptive effect of the upper surface of the slide and the lower surface of the cover glass. This arrangement is specially recommended for the investigation of all colloidal substances, serum solutions, drinking water, etc. With some additions as listed in separate outfit this arrangement is the only practical one for the investigation of ultra-micros inside solid bodies, glasses and crystals. *For more detailed description send for Zeiss Mikro 239.* Suitable outfits for both liquid colloids and solid colloids are offered as follows:—

- |        |   |        |                        |        |
|--------|---|--------|------------------------|--------|
| 32700. | Complete Slit Type Ultra-Microscope Outfit for Liquid Colloids, consisting of table top with optical bench; objective $f = 120$ mm in disc-stop on saddle stand; precision slit on saddle stand capable of being rotated by $90^\circ$ ; objective $f = 55$ mm in disc-stop on saddle stand; sole-plate with cross slide for the optical bench with intermediate-plate; achromatic objective AA for the cross slide; immersion objective D <sup>+</sup> with trough holder and screw-ring in case, trough with fixed sleeve with conical adapter and hose-clamp; Stand V without mirror, stage or case; Huyghenian ocular 4, cross ruled, with sliding eyelens; Weule's automatically regulating arc lamp for direct current, 5 amperes, with diaphragm for the casing and rheostat for 110 volts. <b>Duty Free</b> ..... | 172.65 | <b>Duty Paid</b> ..... | 214.09 |
| 32704. | Complete Slit Type Ultra-Microscope Outfit, as above, with rheostat for 220 volts. <b>Duty Free</b> .....   | 177.38 | <b>Duty Paid</b> ..... | 219.95 |
| 32708. | Additional Equipment to above for Solid Colloids, consisting of achromatic objective C, polarizer on saddle stand, Analyzer I and Zeiss Microscope Stand IV with stage to raise and lower, without Abbe illuminating apparatus, and with case. <b>Duty Free</b> .....   | 120.75 | <b>Duty Paid</b> ..... | 149.73 |

No. 32732

32732. Microscope, Zeiss, for the Observation of Liquid Crystals, consisting of Stand IV, with large mechanical stage divided in degrees with index, but without condenser system, diaphragm holder and iris diaphragm; with gas heating condenser with air cooling apparatus; preparation stage for the large mechanical stage; rotatory and adjustable analyser with selenite film for red of the first order; objectives A and D, each with water cooling arrangement; cross line oculars 2 and 4; micrometer ocular H3 and compressed air cylinder.
- |                |        |
|----------------|--------|
| Duty Free..... | 221.25 |
| Duty Paid..... | 274.35 |

32736. Microscope, Zeiss, same as above, but with analyzer, to be put on the ocular instead of the rotatory and adjustable analyser.
- |                |        |
|----------------|--------|
| Duty Free..... | 207.50 |
| Duty Paid..... | 257.30 |

No. 32740

32740. Microscope, Binocular, Chun, with image erecting prisms, as used for dissecting and observing small animals in trays or on plates of large dimensions. The legs of the stand are jointed and may be extended or brought together to suit the size of the vessel. With paired oculars Nos. 2 and 4 and paired objectives of 77 mm and 40 mm focus, giving a range of magnifications from about 10 diameters to 50 diameters.
- |                |       |                |        |

No. 32956

- 32936. Micro Object Marking Apparatus.** This device is mounted in a society screw and can be inserted in place of the objective or carried on the nosepiece for use when occasion demands. After the field to be marked is found the diamond point is set to engrave a circle around same, the smallest circle possible being  $\frac{1}{2}$  mm. After the circle is made, the field can always be easily located by the use of a low power objective at first. This apparatus is intended for use only on preparations mounted under a cover glass.  
 Duty Free ..... 10.50      Stock ..... 14.00
- 32940. Micro Object Marking Apparatus,** in objective mounting for screwing into nosepiece. This arrangement marks by means of a colored ring on the cover glass. The apparatus is filled with coloring matter and when brought gently in contact with the slide leaves a small ring. .... 4.50
- 32944. Microscope Oven, Plehn-Nuttall,** for constant temperatures, improved construction, with metal parts of Nickelin, a non-corrodible alloy. With micro burner and metallic thermoregulator, but without thermometer or microscope  
 Duty Free ..... 61.05      Duty Paid ..... 81.40
- 32948. Micro Warm Stage, Pfeiffer,** with three concavities for hanging drop, tubulations for inflow and outflow of water and thermometer graduated from  $33^{\circ}$  to  $44^{\circ}$  C. in  $\frac{1}{2}$ ths. .... 7.50
- 32952. Micro Warm Stage, Schultze,** consisting of a "U" shaped metal stage to which heat is applied by means of an alcohol lamp or small burner. The stage is fitted with a condenser which renders it available for observations under a high power, and has a thermometer reading to  $100^{\circ}$  C. .... 12.00
- 32956. Micro Warm Stage, Stricker,** consisting of a flat metal chamber through which a constant stream of warm water may be passed; with a lens at the center making it available for use with high powers. A thermometer is provided with bulb within the chamber and scale on the outside of stage. .... 14.00
- 32960. Ocular, Double Demonstrating,** for use with two observers, with pointer in the common field of view, with power of 6x.  
 Duty Free ..... 17.60      Duty Paid ..... 22.00

33020.	Culture Slide, consisting of heavy polished plate glass slide with cell, 15 mm in diameter 3 mm deep, fused on in electric furnace. The advantage of this slide is that the bottom of the cell consists of the plate glass slide free from inequalities.	.35
33024.	Culture Slides, for cultures, electrolysis, etc., with side tubes and cover glass.	1.00
33028.	Glass Rings for Micro Slides, with edges finely ground, for cementing on ordinary slides to make cells

No. 33034 with Microscope in Horizontal Position

**MICRO-PHOTOGRAPHIC APPARATUS, BAUSCH AND LOMB, MODEL G, for Horizontal and Vertical Work, with and without Microscope.** Designed especially for general laboratory and research work in college, commercial institution or wherever photomicrographic work of the highest grade is desired. The new models presented here are the outgrowth of many years experience in developing and constructing apparatus of this general type with a view of obtaining the greatest possible stability and efficiency. Not only will this apparatus accommodate a wide range of magnifications, producing photomicrographs up to 8 x 10 inches in size, but it can also be used to advantage in photographing gross objects, in enlarging and reducing work and is thus an excellent laboratory camera. Its distinctive features are:

**Extreme rigidity.**

Constantly accurate alignment of parts, due to construction on single supporting stand with accurately planed optical beds, free from spring and vibration.

**Superior illuminating system.**

Convenient and effective adjustments. Swing-out of microscope plate, permitting direct observation of object to be photographed through eyepiece.

Long range vertical adjustment of microscope plate, permitting use of any standard microscope.

Special camera box, providing for focusing on opaque screen in place of ground glass if desired.

Removable plate holder adapter, permitting long side of plate to be placed in either vertical or horizontal position.

**Wide scope of adjustability and usefulness.**

**Supporting Stand**—Of cast iron, massive construction, having base of four feet cast in one piece with heavy connecting rib, base has spread of 54 x 24 in., and is fitted with both castors and leveling screws; two upright supports carry main optical bed at height of 42 in., wooden shelf for accessories measuring 37 x 18 in. is mounted between upright supports.

**Optical Beds**—Three in number, of lathe type, carefully planed and accommodating supports for the different parts, which may be adjusted as desired and rigidly clamped; main bed, 78 in. (198.5 cm) long and 4 1/2 in. (11.8 cm) wide, carries two supplementary beds—one adjustable carrying camera, and one stationary, bearing illuminating apparatus; adjustable bed 49 in. (124 cm) long and 4 1/2 in. (11.8 cm) wide, can be set at any position from the horizontal to the vertical and rendered absolutely rigid by its supporting braces; both main and adjustable beds graduated in centimeters and millimeters with every fifth centimeter numbered; stationary bed is mounted on heavy casting which may be clamped to main bed at any desired point or removed without difficulty.

**Illuminant**—Two different electric illuminants are regularly listed with outfit—90° arc lamp, provided with long extension feeding device for adjusting from rear of camera box, or single-glower Nernst lamp for 110 or 230 volts; both lamps mounted either in large light-tight lamp house with observation windows and spring door or in smaller lamp house without door; both lamp houses, when furnished with arc lamp, provided with small mirror mounted near one of observation windows to serve as guide in feeding lamp from rear of camera box; 5-ampere, 110 volt rheostat mounted on base of stand, when arc lamp is furnished.

**Condensing System**—Apparatus is listed with two different condensing systems—complete and simple; complete consists of regular triple system, 4 1/2 inch diameter, in Bausch & Lomb patent ventilated mount with water cell, bellows and standards mounted on stationary optical bed, front standard of bellows has special mounting carrying a 2 1/2 inch diameter, 12 inch focus plano convex condensing lens for use with front lens of triple system removed, an iris diaphragm with 2 1/2 inch opening and a trough for carrying yellow glass ray filter or cell for liquid filter, both of which are furnished with outfit; simple system consists only of this front standard with plano-convex lens, iris diaphragm and ray filters as described.

**Camera**—Consists of supports carrying tapering bellows with draw of approximately 40 in., having wire support in center; rear support carries box of neatly finished hard wood with door in side for use in focusing image on opaque white screen if desired; supplied with reversible adapter carrying laboratory plate holder for 8 x 10 plates and kits for smaller sizes, also with two focusing screens—one ground glass with clear center and one clear glass with graduated cross lines in center; hinged cover with two springs at rear of adapter permits plate holder to be placed in exact position without jarring apparatus; plate holder of special book form construction, ensuring exact registration.

**Shutter**—Bausch & Lomb automatic shutter, No. 4570, with steel leaves, having a maximum opening of 40 mm; may be set for instantaneous, bulb or time exposure; supplied with tube for making light-tight connection with microscope eyepiece.

**Microscope Plate**—Of metal, 7 1/2 x 5 1/2 in., provided with three leveling screws to serve in bringing any microscope into exact alignment with optical axis of camera; fitted to main optical bed by clamping block and provided with vertical screw of 9 inch range, operated by hand wheel, for accommodation of varying center distances on different microscopes; so constructed that plate may be turned out 90° for locating field to be photographed by direct observation, and provided with a stop which brings it at once into alignment with optical axis of camera when turned back; support attached to plate carries universal joint and pulley with extension rod, by means of which fine adjustment of microscope, whether level, prism or side adjustment, can be controlled from rear of camera box.

Prices on following page.

No. 33084 with Microscope in Vertical Position

No. 33084 Arranged for Macro-Photography

33084. **Large Micro-Photographic Apparatus**, as above described, complete with adjustable and stationary beds, arc lamp with adjusting rod, large light-tight lamp house, 5 ampere, 110 volt rheostat, complete condensing system, adjustable microscope plate with adjusting rod for microscope, camera and shutter as described. .... 300.00
33088. **Large Micro-Photographic Apparatus**. Same as No. 33084 but with Single-Glowler Nernst lamp in place of arc, rheostat and adjusting rod. .... 287.50
33092. **Large Micro-Photographic Apparatus**. Same as No. 33084 but with small lamp house and simple condensing system in place of complete. .... 280.00
33096. **Large Micro-Photographic Apparatus**. Same as No. 33092 but with Single-Glowler Nernst lamp in place of arc, rheostat and adjusting rod. .... 267.50
33100. **Automatic Arc Lamp**, will be furnished with any of the above outfits, in place of the hand-feed arc and adjusting rod, at an additional cost of. .... 57.50
33104. **Regular Double Plate Holder** for 8 x 10 plates, without reducing kits. .... 2.00
33108. **Regular Double Plate Holder**. Same as No. 33104, with reducing kits. .... 4.00
33112. **Special Single Laboratory Plate Holder**, bookform, for 8 x 10 plates, with reducing kits. .... 5.50

*Note.*—Special descriptive pamphlet sent on application. Because of the many possible combinations and arrangements of this outfit we suggest the sending of information as to requirements so that we may submit detailed estimate on specific outfit.

No. 33116

33116. **Micro-Photographic Camera, Bausch and Lomb, Model H.** The Camera is the same as furnished with the combined apparatus and is mounted on a similar optical bed, graduated to 640 mm. The bed is mounted by a strong hinge joint on a heavy metal base, 13 x 9½ in.; may be adjusted in any position between the vertical and horizontal and secured by a clamp. The adjustments on the plate will accommodate any standard microscope. The outfit does not include an illuminating apparatus or shutter. .... 45.00

No. 33120

33120. **Micro-photographic Camera, Bausch & Lomb Model K**, a simplified outfit for quick operation. The plate holder will take 3½ x 4½ inch plates. The camera may be rotated in and out of the axis of the microscope as shown in illustration and the base may be utilized on the work table as a regular support for the microscope at all times so that the vertical rod and camera need only be added when photographs are to be made. .... 20.00
33124. **Automatic Shutter**, with maximum opening of 40 mm, for use with instantaneous, bulb or time exposure, and ready to attach to either Model H or Model K cameras as listed above. .... 10.00

No. 33128—Arranged for Drawing

No. 33128—Arranged for Drawing

No. 33128—Arranged for Micro-Photography

# **COMBINED DRAWING, MICRO-PHOTOGRAPHIC AND PROJECTION APPARATUS, BAUSCH AND LOMB,** for use with any regular microscope as used for ordinary work and providing for the following:—

Drawing with apparatus in horizontal position.

Drawing with apparatus in vertical position.

Photo-micrography with camera horizontal.

Photo-micrography with camera vertical.

Gross photography of solid objects with regular photographic objectives.

Gross photography of solid objects with regular photographic objectives.

Microscopic projection.

Lantern slide projection.

Drawing of large opaque objects by addition of opaque attachment.

Photo-micrography of opaque objects by addition of vertical illuminator.

**Supporting Stand**—Of cast iron, provided with both castors and leveling screws.

**Optical Beds**—Two in number, of lathe type, accommodating supports for different parts which may be adjusted as desired and rigidly clamped; one bed, graduated to 570 mm., carries illuminating accessories, microscope plate, and mirror, the other, graduated to 640 mm., carries camera; both are attached to base plate by strong hinge joints, permitting them to be adjusted in either horizontal or vertical position.

**Illuminant**—Either a hand-fed arc or single-arc, lower Nernst electric lamp, as ordered, for use on direct or alternating current, enclosed in a small cylindrical hood with observation windows, attached to rear of condensing system mount; a rheostat is mounted on lower base of outfit equipped with the arc lamp.

**Condensing System**—Regular 4½ in. diam. triple condensing system in patent ventilated mount, which in turn is mounted in a cylindrical shaped metal hood, in which the condensers may be easily adjusted to and fro with reference to the lamp; a conical shaped extension slips on the front of the cylindrical shaped hood and helps to render the apparatus more nearly light-tight; diaphragms of three different apertures are furnished to cut off superfluous light and heat when desired; entire illuminating apparatus is carried by a special fork and standard, adjustable for height and also to and fro on the optical bed, and provided with coarse and fine adjustment screws for shifting its direction vertically or laterally.

**Camera**—Regularly supplied with camera for 4 x 5 in. plates, having a maximum bellows draw of 24 in., equipped with a double plate holder with reducing kits for 3½ x 4½ in. plates and a ground glass focusing screen with clear center; in adjustable mounting on two supports clamped to optical bed; front standard fitted with sliding light-tight tube to connect with microscope. A similar camera to take 5 x 7 in. plates can be supplied at an extra cost.

**Shutter**—Automatic with steel leaves, having a maximum opening of 40 mm.; may be set for instantaneous, bulb or time exposure.

**Drawing Board**—Of wood, neatly finished, 14 in. square, adjustable on front standard of supporting stand, which is graduated so that one can readily reset board at any particular position; supplied with velvet hood on adjustable standard to shield board from light.

33128.	Combined Drawing and Micro-photographic Apparatus, as described, with hand-feed arc lamp and 5 ampere rheostat for 110 volts without microscope .....	155.00
33132.	Combined Drawing and Micro-photographic Apparatus, but with 5 ampere rheostat for 220 volts. ....	157.50
33136.	Combined Drawing and Micro-photographic Apparatus, but with single-glower Nernst lamp in place of arc. Please to specify voltage when ordering .....	150.00

**MICRO-PHOTOGRAPHIC APPARATUS, ZEISS.** We list below two typical micro-photographic outfits, one on the basis of the Zeiss Combined Horizontal and Vertical Camera with Nernst light and one on the basis of the Large Micro-photographic Camera with Mercury Vapor Lamp. Equipment for micro-photography should be selected in every case with special reference to the sources of light available and the kind of work to be accomplished and we recommend that we be permitted to make specific quotation wherever possible. Zeiss *Mikro-264*, a 50 pp. catalogue devoted exclusively to micro-photographic equipment, will be sent upon request. Modern research has shown that the large sources of light of great current consumption are unnecessary if a proper condensing system be used, and where electric current is available we recommend for alternating current the Nernst lamp with iris diaphragm and where direct current is available the Weule arc lamp requiring only 5 amperes of current as compared with the 20 and 30 ampere lamps formerly used, or the new Mercury Vapor Lamp as shown in lower illustration. This Lamp furnishes an extraordinarily uniform and bright light, which with the aid of simple light filters is rendered monochromatic to a very perfect degree. The Zeiss Weule arc lamp with rheostat and condensing lens is applicable to either of the outfits listed below at the following prices:—

33140.	Weule Direct Current Arc Lamp, 5 amperes; with casing.		
	Duty Free	50.00	Duty Paid..... 66.00
33144.	Condensing Lens IC, on saddle stand with iris diaphragm	15.00	Duty Paid..... 19.80
33148.	Adjustable Resistance for 110 volts direct current.		
	Duty Free	4.65	Duty Paid..... 6.14
<b>Micro-photographic Outfit, Zeiss, on basis of Combined Horizontal and Vertical Camera (illustration shows Camera in horizontal position). Without Microscope or equipment for same.</b>			
33156.	Combined Horizontal and Vertical Camera, for plates 7 x 9 inches.	45.00	59.40
33160.	Two sets of kits for smaller plates	1.50	1.98
33164.	Focussing Glass.	5.00	6.60
33168.	Remote Focussing Gear for attachment to Zeiss Stands with Berger fine adjustment	14.50	19.14
33172.	Optical Bench.	5.00	6.60
33176.	Nernst Lamp on saddle stand, with Aplanatic Condenser and iris diaphragm	28.25	34.65
33180.	Rheostat for above, for 110 volts alternating or direct current	2.50	3.30
33184.	Ray Filter, for attachment to the lamp, with glass cell.	2.50	3.30
33188.	Complete Outfit, as above.	102.25	134.97
<b>Micro-Photographic Outfit, Zeiss on basis of Large Camera with Mercury Vapor Lamp, for direct current only Without Microscope or equipment for same.</b>			
33192.	Large Camera, with cast iron stand for raising and lowering. For plates 10 x 12 inches	77.50	102.30
33196.	Three sets of kits for smaller plates	2.25	2.97
33200.	Focussing Lens	6.50	8.58
33204.	Projection Table, with optical bench mounted on rigid cast iron stand.	25.00	33.00
33208.	Elevating Support for the microscope when it is to be used in upright position.	13.00	17.16
33212.	Reflecting Prism, with sleeve for attachment to the camera when Microscope is to be used in vertical position	5.00	6.60
33216.	Remote Focussing Gear	12.75	16.83
33220.	Mercury Vapor Quartz Lamp, for 4 amperes direct current.	32.50	42.90
33224.	Light-proof Lamp Casing, for above, on saddle stand so arranged that no injury can result from ultra-violet radiation.	27.50	36.30
33228.	Rheostat for 110 volts	6.25	8.25
33232.	Condenser IB on saddle stand with screen disc.	7.50	9.90
33236.	Iris Diaphragm, on saddle stand.	7.50	9.90
33240.	Ray Filter, on saddle stand, with two cells	5.00	7.32
33244.	Complete Outfit, as above.	229.25	302.61

No. 33336

**MICRO-PHOTOGRAPHIC OUTFIT FOR ULTRA-VIOLET LIGHT, ZEISS.** The special effects obtainable by the application of ultra-violet light to micro-photography are mainly as follows:—

**Resolving power.** In a microscope objective this increases in direct proportion to any decrease in the wavelength of the light used. With the quartz objective in this arrangement the resolving power is about doubled as compared with an objective of identical numerical aperture when made of glass and operated with daylight.

**Permeability.** Many colored organic objects, both in the fresh and preserved state, display considerable variation in their degree of permeability under ultra-violet light when they show no sign of color in white light.

**Physiological effects.** These are sometimes very pronounced upon living organic objects.

The objectives employed are the monochromats of quartz, corrected for wavelength  $275 \mu$  and with a numerical aperture of the high power 1.25. The entire optical system including slides, cover glasses, etc., must be of fused quartz or of glass permeable to the ultra-violet ray. The monochromatic objectives of quartz cannot be used with light of a different wavelength, such as daylight, nor can they be used with an immersion fluid differing in composition or having a refractive index other than that as supplied with each objective. The outfit consists essentially of a Cadmium arc as a source of light which is actuated by the secondary circuit from an induction coil. The beam of wavelength  $275 \mu$  from this sort of light is made available by quartz prisms and this beam, after passing through a quartz condenser lens, is used as a source of illumination for the microscope. As the ultra-violet of this wavelength is totally invisible to the eye, fluorescence screens must be used in order to find suitable field, etc. A list (*Zeiss Mikro 237*) of the complete literature referring to the use of this interesting method, and also *Mikro 170* giving more detailed information as to the outfit is sent upon request. The outfit listed below is the latest arrangement offered by the firm of Carl Zeiss.

	Duty Free	Duty Paid.
33348. Cast Iron Base Plate, with slides for the microscope	9.00	11.88
33352. Vertical Camera	23.75	31.35
33356. Adapter, with time shutter	1.00	1.32
33360. 2 Sheets for 9 x 12 cm plates	.75	.99
33364. Dark Slide, for two 9 x 12 cm plates, with diaphragm to insert into the register of the camera	8.75	11.55
33368. Searcher, with quartz objective, fluorescent screen and 12 x magnifier for direct observation	12.50	16.50
33372. Carrier for the Searcher, with sleeve and clamping screw to fix it on the rod of the vertical camera	1.25	1.65
33376. Totally Reflecting Prism of quartz, in sliding sleeve	6.25	8.25
33380. Monochromatic Objective 6 mm, 0.35 N.A.	50.00	62.00
33384. " 2.5 mm, 0.85 N.A.	100.00	124.00
33388. " 1.7 mm, 2.50 N.A.	150.00	186.00
33392. Achromatic Objective A	5.00	6.20
33396. Quartz Eyepieces 5, 7, 10, 14 and 20	37.50	46.50
33400. Huyghenian Eyepiece 2	1.50	1.86
33404. Sliding Objective Changer for the three Monochromatic and the Achromatic Objective A	10.00	12.40
33408. Mahogany Case, with lock and key, for 6 objective slides and objectives attached	3.75	4.65

(Outfit continued on following page.)

**Micro-Photographic Outfit for Ultra-Violet Light, Zeiss (continued)**

	Duty Free	Duty Paid
33112. Quartz Condenser, with iris diaphragm and with a single front and a duplex front, interchangeable.....	17.50	23.10
33116. Centering Appliance for the quartz condenser, or for objectives which are to be used as condensers.....	3.00	3.96
33120. Screen, of Uranium Glass, to insert into the diaphragm carrier of the Abbe illuminating apparatus, with ruled circle.....	2.00	2.64
33121. Rectangular Plane Mirror, to place on the foot of the microscope stand.....	.33	.49
33128. 4 Object Slides of quartz, ground vertical to the optical axis, 0.3 mm thick, size 25 x 30 mm each.....	4.50	5.58
33132. 10 Object Slides of U V Glass, about 0.2 to 0.3 mm thick, size 20 x 30 mm.....	5.00	6.20
33136. 5 Aluminum Slides, as desired by Heidenhain.....	2.50	3.10
33140. 5 Cover Glasses, of fused quartz.....	3.75	4.65
33441. Stage Micrometer, 1 mm divided into 100 parts, on quartz slide under a cover glass of fused quartz with one Heidenhain aluminum slide.....	5.00	6.20
33148. Stand III E with one mechanical stage, 1.40 N.A.....	91.25	113.15
33152. Horse shoe cast iron Base Plate.....	2.50	3.10
33156. Short Optical Bench, with three set screws and column for the collector.....	5.00	6.60
33160. Spark Stand, for horizontal electrodes.....	20.00	26.40
33164. Projection Lens Carrier, with slide for the collimator, on saddle stand, without micrometrical movement.....	3.50	4.62
33168. Collimator of quartz, of long focus.....	6.25	8.25
33172. Prism Platform with two prism mounts screwed upon it, on saddle stand.....	5.75	7.59
33176. 2 Prisms of quartz, refractive angle 60°, with refractive surface about 3 cm high and 5 cm wide, inclined by 60° to the optical axis of the crystal.....	25.00	33.00
33480. 10 meters Cadmium Wire.....	2.50	3.30
33484. 10 meters Magnesium Tape.....	.75	.99
33188. Induction Coil, series III, without condenser.....	45.00	59.40
33192. Electrolytic Contact Breaker, Simon, with porcelain nozzle.....	11.25	14.85
33196. Resistance Coil.....	12.00	15.84
33500. Amperemeter, Type AG, for 1 to 5 amperes, aperiodic.....	9.98	13.17
33504. Switch, for cut-off.....	1.75	2.31
33508. Fluorescent Screen, 3 x 9 cm.....	.38	.50
33512. Condenser, consisting of two Leyden jars.....	11.25	14.85
33516. Burner.....	6.25	8.25
33520. Table top and case for the illuminating apparatus.....	12.50	16.50
33524. Switch-board.....	35.00	46.20
33528. Wire and montage.....	12.50	16.50
33532. Support for the camera.....	1.25	5.61
33536. Complete Micro-photographic Outfit for Ultra-violet Light, as above listed.....	785.73	1037.15

**ACCESSORIES FOR USE WITH MICRO-PHOTOGRAPHIC OUTFITS.**

33540. Micro-Tessar Objective, Bausch & Lomb, Zeiss, constructed after the formulae of the large photographic lenses of the same name and particularly well adapted to photo-micrography. The angle of view is 55°, the illumination is uniform and the definition remarkably sharp. Each is mounted with a metal iris diaphragm and provided with a society screw. 72 mm equivalent focus.....		32.00
33544. Micro Tessar Objective. Same as above, but with 48 mm equivalent focus.....		26.00
33548. Micro Tessar Objective. Same as above, but with 32 mm equivalent focus.....		26.00
33552. Doublet Focusing Glass.....		4.00
33556. Achromatic Focusing Glass.....		8.00
33560. Light Filters, Wratten and Wainwright, Set of 9, etc., for micro-photography, cemented between glass, 2 inches square.		
Duty Free.....	8.10	Duty Paid..... 11.10

View in Salesroom Showing Microscopes, and Accessories, Apparatus for Cement and Asphalt Testing, etc.

No. 33612

No. 33560

No. 33624

No. 33636

# MICROTOME, STUDENT, BAUSCH AND LOMB, suitable for individual and elementary laboratory use.

**Feeding Mechanism**—Operated by hand; consists of accurately cut micrometer screw of 0.5 mm pitch, provided with a disc graduated into 100 parts each equal to 5 microns, the edge having 100 teeth which engage with a click and secure perfect control of the feed; whole supported in a metal stirrup, permanently attached to front of stand.

**Object Clamp**—Of one piece, extremely rigid; when fully extended will accommodate objects measuring 30 x 22 mm; adjustable vertically and orienting in one plane; may be attached at either side of vertical slide for paraffin or celloidin works.

**Dimensions**—Length, 240 mm; width, 127 mm; height, 146 mm.

**Possible Attachments**—Microtome regularly furnished without knife; plain knife No. 33744, 90 mm, with holder No. 33772 or shanked knife No. 33752 are recommended; CO: Freezing attachment can be fitted to this instrument.

33600.	Student Microtome, without knife and holder, as described	22.00
33604.	Plain Microtome Knife, 90 mm, without handle, in case, but with No. 33772 Knife Holder	5.00
33752.	Shanked Microtome Knife, 90 mm, in case	5.00

# MICROTOME, MEDIUM LABORATORY, BAUSCH AND LOMB, as widely used in hospital laboratories.

**Feeding Mechanism**—Operated by convenient hand lever; can be set by simple movement of the quadrant to feed any thickness from 2 to 60 microns, in steps of 2 microns; provided with split nut which releases carriage at any point of feed, enabling it to be returned to any point at once; whole supported in metal stirrup permanently attached to front of stand.

**Object Clamp**—Of one piece, extremely rigid; when fully extended will accommodate objects measuring 35 x 32 mm, adjustable vertically and orienting in one plane; can be set at either side of the vertical slide for paraffin or celloidin works.

**Dimensions**—Length, 300 mm; width, 143 mm; height, 188 mm.

**Case**—Microtome supplied in strong wooden box with handle.

**Possible Attachments**—Microtome regularly furnished without knife; plain knife No. 33744, 125 mm, with holder No. 33772 or shanked knife No. 33752, 125 mm, are recommended; CO: Freezing attachment can be fitted to this instrument, as can the Naples Universal Clamp.

33612.	Medium Laboratory Microtome, without knife and holder, as described	45.00
33616.	Plain Microtome Knife, 125 mm, without handle, in case, but with No. 33772 Knife Holder	6.50
33752.	Shanked Microtome Knife, 125 mm, in case	6.75

# MICROTOME, AUTOMATIC LABORATORY, BAUSCH AND LOMB, a most satisfactory form of the sledge type of Microtome for general use. A special feature is the lateral adjustability of the feeding mechanism along the entire front of the stand, providing for different cutting angles and stroke lengths. The feeding is either automatic or by hand as desired.

**Feeding Mechanism**—Automatically operated with stroke of knife by arm extending from rear of knife block—also provided with lever for hand feeding; controlled by adjustable cam with graduated knurled button and spring click, giving feed of 2 to 36 microns in steps of 2 microns; provided with split nut having convenient handles and with releasing lever, enabling carriage to be released at any point of feed and to be set at any desired position on the feed instantaneously; whole supported in a metal stirrup adjustable laterally along front of stand and secured in any position by clamping screws.

**Object Clamp**—Of one piece, extremely rigid; engages rigidly with slide; when fully extended will accommodate objects measuring 35 x 32 mm; adjustable vertically and orienting in one plane; can be set at either side of the vertical slide for paraffin or celloidin works.

**Dimensions**—Length, 344 mm; width, 158 mm; height, 218 mm.

**Possible Attachments**—Microtome regularly furnished with knife; plain knife No. 33744, 165 mm, with holder No. 33772 or shanked knife No. 33752, 165 mm, are recommended; Ether Freezing attachment can be fitted to this instrument, as can the Naples Universal Clamp.

33624.	Automatic Laboratory Microtome, without knife, as described	65.00
33628.	Plain Microtome Knife, 165 mm, without handle, in case and No. 33772 Knife Holder	8.00
33752.	Shanked Microtome Knife, 165 mm	8.00

No. 33644

No. 33652

**MICROTOME, MINOT ROTARY, BAUSCH AND LOMB**, as designed by Dr. Charles S. Minot of Harvard University and improved from time to time during the past twelve years. The most widely used and satisfactory instrument for paraffine cutting. (See illustration on preceding page.)

**Feeding Mechanism**—Consists of a micrometer screw revolved by a large ratchet wheel which engages a pawl; amount of feed controlled by a cam; wheel provided with knurled head which permits fine adjustment of object in relation to knife with pawl disengaged and held off wheel by spring catch; cam disc graduated in single microns, numbered from 0 to 25, and operated by knurled head; micrometer screw fitted with split nut provided with handles and releasing lever, by means of which feed can be instantly brought to beginning, or any intermediate position, and held; feed wheel protected by strong iron guard of neat design.

**Object Holder**—Consists of disc 25 mm in diameter, adjustable in mounting which permits of orientation to give any desired cutting angle; securely held in position by convenient screws; moves on a vertical slide actuated by a crank operated by a heavy balance drive wheel with handle and stopped when desired by convenient locking device.

**Knife Block**—Consists of heavy iron casting which is attached to base and holds knife in fixed position; adjustable to and from object and from side to side to permit use of entire cutting edge; knife clamp may also be tilted in its support to set angle of cutting edge as desired.

**Dimensions**—Length, 196 mm; width, 212 mm; height, 214 mm.

**Case**—Supplied in strong wooden box with handle.

**Possible Attachments**—Regularly without knife, unless otherwise specified; knife No. 33744, 125 mm blade, without handle is recommended and can be included at its additional cost; rotary object clamp, No. 33732 or No. 33728, can also be attached, and the ribbon carrier, No. 33720.

33636. **Minot Automatic Rotary Microtome**, without knife, as described with three object discs. . . . . 75.00  
33744. **Knife**, 125 mm blade, without handle in case. . . . . 4.75

**MICROTOME, MINOT SIMPLIFIED ROTARY, BAUSCH AND LOMB**, designed to meet the demand for a Rotary Microtome at less expense than the original Rotary No. 33636.

**Feeding Mechanism**—Consists of a micrometer screw revolved by a ratchet wheel which engages a pawl; amount of feed controlled by a cam; wheel provided with a small handle, permitting fine adjustment of object in relation to knife with pawl disengaged and held off wheel by spring catch; cam disc graduated in steps of 2½ microns, up to 25 microns, and operated by large knurled head.

**Object Holder**—Consists of disc 25 mm in diameter, having fixed ball on stem universally adjustable in socket holder; can be oriented to give any desired cutting angle and securely clamped in place by convenient screw; stem of disc projects through holder permitting convenient adjustment from the rear, holder moves on a vertical slide actuated by a crank which is operated by a heavy balanced drive wheel with handle and stopped by a convenient locking device. Object holder on Minot Automatic Rotary Microtome No. 33636 can be substituted for that above if desired.

**Knife Block**—Consists of heavy iron casting which is attached to base and holds knife in fixed position; adjustable to and from object and from side to side to permit use of entire cutting edge; knife clamp may also be tilted in its support to set angle of cutting edge as desired.

**Dimensions**—Length, 196 mm; width, 212 mm; height, 208 mm.

**Case**—Supplied in strong wooden box with handle.

**Possible Attachments**—Regularly furnished without knife, unless otherwise specified; knife No. 33744, 90 mm blade without handle is recommended; rotary object clamp, No. 33732 or No. 33728 can be attached, as can also the adjustable knife holder.

33644. **Minot Simplified Automatic Rotary Microtome** as described, without knife and with three object discs. . . . . 40.00

33744. **Knife**, 90 mm blade, without handle, in case. . . . . 3.50

**MICROTOME, MINOT AUTOMATIC PRECISION, BAUSCH AND LOMB**. This microtome, designed and recently improved under the supervision of Dr. Minot is unexcelled, we believe, for all around work of the most accurate nature. It is intended for very precise section cutting of large specimens, either paraffin or celloidin, but can be used for serial work as well and has given eminent satisfaction in some of the most exacting laboratories of the world.

**FEEDING MECHANISM**—Consists of a micrometer screw with an available feeding length of 38 mm, turned by a large ratchet wheel which engages a pawl and is controlled by a cam; cam disc graduated in single microns, numbered from 0 to 25, and operated by knurled head, micrometer screw fitted with our split nut provided with handles and releasing lever, by means of which feed can be instantly brought to beginning, or any intermediate position, and held; feed wheel protected by metal cover of neat design. With rack and pinion device for raising and lowering object clamp.

**KNIFE SUPPORT**—Consists of oblong frame, carefully machined, with T-slot on all four sides and having two knife clamps movable in slots to place knife at any horizontal angle with relation to object.

**DIMENSIONS**—Length, 405 mm; width, 194 mm; height, 345 mm.

**POSSIBLE ATTACHMENTS**—Micrometer regularly furnished without knife; Minot knife, No. 33660 is listed for use with this model; adjustable knife clamps No. 33664 for tilting; Zabriskie object clamp No. 33656, can also be attached, as can the ribbon carrier, No. 33724.

33652. **Minot Automatic Precision Microtome**, without knife, as described. . . . . 125.00

33656. **Zabriskie Clamp** for large objects, for use with above Microtome only. . . . . 15.00

33660. **Minot Knife**, length 315 mm, in case. . . . . 15.00

33664. **Tilting Knife Clamps** for Precision Microtome. . . . . 7.50

33668. **Minot Automatic Precision Microtome**, with **Zabriskie Clamp** for objects 100 x 80 mm and less and with special clamps for elevating and tilting knife, as used at Rockefeller Institute for Medical Research, Neurological Institute and College of Physicians and Surgeons of New York City, etc. Complete 147.50

No. 33672

- 33672. Microtome, Large Brain, Sartorius,** for cutting whole brain sections to a thickness of 15 microns. As used in leading neuropathological laboratories in both the United States and Europe. Will take a preparation 210 x 210 mm. The sectioning is done by the celloidin method and the knife operates under the surface of the alcohol. Special CO<sub>2</sub> freezing device may be used in connection with this microtome for freezing whole brain sections at extra price. Price includes one knife 45 cm long and wooden table for the microtome.

No. 33692

No. 33692—Attached to CO<sub>2</sub> Cylinder No. 29548

- 33692. Microtome, Freezing, Sartorius,** suitable for both paraffin and celloidin cutting but widely used as the most convenient form of microtome for quick sectioning of specimens frozen by means of CO<sub>2</sub>. With automatic adjustment for sections down to 5 microns in thickness. Including object clamp, two knives with box and springback for honing, embedding disc, and CO<sub>2</sub> freezing attachment but without CO<sub>2</sub> Cylinder.
- |           |       |       |       |

Note:—Because of the U. S. law requiring registration of cylinders in which CO<sub>2</sub> is sold we recommend the use of U. S. Standard Cylinders. See p. 232.

No. 33696

No. 33700

No. 33704

No. 33720

No. 33712

No. 33728

No. 33732

No. 33736

No. 33740

33696. **Microtome, Hand, Bausch & Lomb.** This convenient little microtome is carefully made and neatly finished. While designed primarily for cutting sections of stems and roots, it can be used for both animal and vegetable tissues. The feed is accurate and effected by means of a micrometer screw, the collar of which is graduated in steps of 25 microns each. Without knife. . . . . 6.00
33700. **Microtome, Table, Bausch & Lomb.** This model attaches securely to a table edge or similar support and is adapted to all kinds of sectioning for thicknesses of 5 microns and over. It is used largely in work preliminary to surgical operations and by students in ordinary laboratory work. Without knife. . . . . 12.50
33704. **Microtome Bardeen CO<sub>2</sub> Freezing, Bausch & Lomb.** This instrument was originally designed by Prof. C. R. Bardeen, formerly of Johns Hopkins University, now of the University of Wisconsin. It is indispensable for clinical work where sections of morbid tissues are required during an operation. The knife slides on glass guides. The finest feed is 20 microns. The object disc is scored concentrically and measures 36 mm in diameter. The microtome may be attached directly to a CO<sub>2</sub> cylinder. We recommend for use with this microtome a special knife No. 33708 with handle to fit the hand. Without knife. . . . . 16.00
33708. **Special Knife.** . . . . 4.00
33712. **CO<sub>2</sub> Freezing Attachment.** The freezing device in this attachment consists of a small metal cylinder. The object is placed on the flat disc top of the cylinder, which measures 36 mm in diameter, and is frozen by the expansion of the CO<sub>2</sub>. This device is connected with the gas cylinder by a flexible copper tube, provided with a connecting nut for joining to the cylinder and the necessary adapter for fitting to the microtome. We furnish it also with an extra valve, which can be placed at either end of the tube. This attachment may be used with Students, Medium Laboratory, Automatic Laboratory or Table Microtomes. Complete with valve, but without cylinder of CO<sub>2</sub>. . . . . 9.00
33716. **CO<sub>2</sub> Freezing Attachment** as above but without valve. . . . . 7.50
33720. **Ribbon Carrier,** for attaching to the knife block of either of the Minot Rotary Microtomes as shown in the illustration and is very useful in serial sectioning. The ribbon is of silk 40 mm wide, mounted on rollers and is easily operated by a knurled head. . . . . 7.50
33724. **Ribbon Carrier,** same as above, for attaching to Precision Microtome. . . . . 7.50
33728. **Object Clamp,** for Rotary Microtomes, to replace embedding disc. With closed back and open sides. Will take an object 26 mm thick. . . . . 3.00
33732. **Object Clamp,** as above, but with closed sides. Will take an object 28 x 26 mm. . . . . 3.00
33736. **" Coplin,** for Rotary Microtomes. Provides extreme rigidity and will take a block 32 x 29 mm. . . . . 4.00
33740. **Object Clamp, Naples Universal** for the Automatic and Medium Laboratory Microtomes. Will accommodate a block 35 x 32 mm. . . . . 15.00

40400.	Goniometer, Grinding, Goldschmidt, complete as described in <i>Zeitschr. für Krystallogr.</i> 1912, Bd. 51, Seite 359.....	690.00	920.00
40404.	Goniometer, Two-Circle type, Goldschmidt, Model 1910, complete as described in <i>Zeitschrift für Krystallogr.</i> , 1898, Bd. 29, Seite 333.....	360.00	480.00
40408.	Goniometer, Two-Circle type, Goldschmidt, as above, simplified model.....	240.00	320.00
40412.	Accessory to the above for the photography of oriented specimens.....	21.00	28.00
40416.	Application Goniometer, Penfield, pocket form, from stock.....		1.25
40420.	Crystal Modeling Apparatus, Goldschmidt, as described in <i>Zeitschrift für Krystallogr.</i> 1908, Bd. 45, Seite 573.....	120.00	160.00
40424.	Mineral Sectioning Apparatus, Wulffing.....	11.40	15.20

No. 40432

No. 40440

No. 40448

40428.	Goniometer, Goldschmidt, large model, for the measuring of very large crystals, complete as described in <i>Zeitschrift für Krystallogr.</i> 1910, Bd. 47, Seite 50.....	Duty Free 540.00	Duty Paid 720.00
40432.	Application Goniometer, Two-Circle type Goldschmidt, an improvement of the 1896 model, as described in <i>Zeitschrift für Krystallogr.</i> 1896, Bd. 25, Seite 321.....	11.40	15.20
40436.	Axial-Angle Apparatus, Wülfing, complete in accordance with <i>Neues Jahrbuch für Mineralogie</i> , 1899, Beil. Bd. 12, Seite 343.....	150.00	200.00
40440.	Tourmaline Tongs, with condensing lens. Price varies in accordance with the perfection of the tourmaline plates. A good specimen may be had for.....	7.50	10.00
40444.	Tourmaline Specimens, mounted in cork mounts, 48 x 28 mm, for demonstration of optical properties of crystals in polariscope, dichroscope, etc., and very suitable for use with tourmaline tongs, and illustrating all of the six crystal systems, are to be had at prices varying in accordance with the perfection of the specimens. On this account it is difficult to list these specimens but complete lists of the best European preparers will be sent on application.		
40448.	Grinding and Polishing Machine, Gasser, designed especially for the preparation of micro sections of bones and teeth. The table is rigidly constructed and is 1 meter in height, and is provided with a zinc dish in which the revolving lap operates, so that grinding may be done under water if necessary. The electric motor drives the lap at a speed of 1500 r.p.m. while above the table a heavy support carries the specimen spindle, provided with knob for hand guidance and adjustable ring for regulating the thickness of the specimen. The specimen discs are 5 cm in diameter. Bone sections may be ground and polished completely in ten minutes and teeth sections in 20 minutes. Outfit consists of apparatus with motor (Voltage must be specified in ordering), starting rheostat, connecting plug, two 15 cm grinding discs of different degrees of fineness, one 15 cm metal disc for polishing and four specimen discs.....	Duty Free 66.00	Duty Paid 80.00
40452.	Extra Grinding Discs, 15 cm, each.....	1.65	2.00
40456.	“ Polishing Discs, 15 cm, each.....	3.00	3.60
40460.	“ Specimen Discs, 5 cm, each.....	.70	.80
40464.	Grinding and Polishing Machine, for minerals and metals, identical in construction with above but with gear providing a speed of 2000 r.p.m. to the grinding disc and with disc 20 cm in diameter. With automatic gear for rotating the spindle carrying the specimen disc during the process. Removable lead weights provide means of regulating the pressure upon the specimen disc when automatic gear is used. An adjustment ring upon the spindle automatically ends the grinding when the desired thickness of specimen is reached. Outfit consists of motor (Voltage must be specified in ordering). With rheostat and connecting plug, two 20 cm grinding discs of silica-carborundum compound of different cutting capacities and 20 cm disc of metal for polishing and two specimen discs 5 cm diameter.....	Duty Free 92.40	Duty Paid 112.00
40468.	Grinding and Polishing Machine, as above, with two specimen spindles for simultaneously grinding two specimens and with four discs.....	118.80	144.00
40472.	Grinding and Polishing Machine, as above, with four specimen spindles for simultaneously grinding four specimens and with eight discs.....	151.80	184.00
40476.	Extra Grinding Discs, of Silica-Carborundum, 20 cm diameter, each....	6.60	8.00
40480.	“ Polishing Discs, of metal, 20 cm diameter, each.....	4.00	4.80
40484.	“ Specimen Discs, each.....	.70	.80

**GONIOMETER, HUTCHINSON UNIVERSAL**, for use as an ordinary goniometer for the measurement of angles, as an axial-angle apparatus, as a Kohlrusch total-reflectometer and for determining refractive indices by the prism method. It is intended primarily for the examination of small crystals and by its aid all the usual crystallographic and optical determinations can be readily carried out. In its design the attempt has been made to combine efficiency with simplicity and strength of construction, together with adaptability to a great variety of purposes.

A circle *D*, five inches in diameter, graduated to  $\frac{1}{2}$  degrees and reading by a vernier to minutes, is supported by a stout bracket *S*, at a height of ten inches above a flat base-plate *P*, eleven inches square. The circle is provided with a slow-motion attachment, and can be clamped by the screw *E*. A steel rod, which can be clamped at any convenient position by the screw *F*, passes through the centre of the circle and carries, at its lower end, the ordinary centring and adjusting arrangements shown at *G*. A loose collar, which can be clamped to the rod by the screw *R*, gives the means of raising the adjusting head and of again lowering it to its former position.

A telescope *A*, and a collimator *C*, are securely clamped to the base-plate in the manner shown at *K*, a number of holes being provided for this purpose at convenient positions. The object-glasses of the telescope and collimator are  $\frac{1}{2}$  inch in diameter and about 4 inches in focal length. Their tubes are carried by collars, provided with adjusting screws. An additional lens of 2½ inches focus is also supplied. This can be slipped into position in front of the objective of the telescope, thereby converting the latter into a microscope of low power with which the crystal can be examined.

The telescope and collimator are placed at any convenient angle to one another (some angle between  $60^\circ$  and  $90^\circ$  will be found suitable), and the microscope *B* is arranged so that its optical axis bisects the angle between them. The microscope tube, which is eight inches long, is moved by an ordinary coarse adjustment actuated by a pair of milled heads, one of which is seen in the figure just below the telescope. At one end it carries the fitting of an objective changer of the Zeiss pattern which enables different objectives to be rapidly slipped into position and provides a means of adjusting them to the axis of the microscope. Objectives of  $\frac{1}{4}$  inch and of 2 inches focal length will be found the most generally useful, but others can be employed if desired. At the other end a nicol *N* slips on over the eye-piece; the latter and the nicol-holder are slotted to admit of the insertion of a quartz-wedge or mica-plate. A Bertrand lens *L* slides into the body of the microscope.

An adjustable table *T*, which can be levelled by the screws *W*, is carried by a steel rod which can be clamped by the screw *Q*; a loose collar clamped to the rod by a screw enables the table to be rotated when supported at any convenient height. On this table can be placed a tank, when it is desired to observe the crystal immersed in a liquid.

Two extra fittings, not shown in the figure, are also provided. One enables a short tube containing a nicol and a condensing lens to be placed opposite the objective of the microscope. The other can be clamped to the graduated circle: at its lower end it carries a collar into which the telescope *A* can be screwed, thus enabling the latter to be supported at the same height above the base-plate ( $\frac{3}{4}$  inch) as the collimator and microscope.

40488.	Universal Goniometer, as above, with 2 inch and $\frac{1}{4}$ inch microscope objectives and centering objective changes.....	Duty Free 210.00	Duty Paid 280.00
40492.	Special Objective, with centering changes and webbed eyepiece for using microscope as a telescope.....	15.00	20.00
40496.	Glass Tank, with optically plane face and Centigrade thermometer.....	5.60	7.50
40500.	Sliding tank holder.....	6.00	8.00
40504.	Case, for complete outfit.....	12.00	16.00

40512.	Dichroscope, von Lang, improved form, in case.....	Duty Free 4.20	Duty Paid 5.60
40516.	Dichroscope, with revolving stage and graduated circle, with spectroscopic attachment.....	12.00	16.00

No. 40520

**MICROSCOPE, BAUSCH & LOMB PETROGRAPHICAL RESEARCH MODEL LD.** This microscope, except for certain mechanical details, is patterned after the microscope described by *F. E. Wright in Amer. Jour. of Science*, (4) 29, 407-414, 1910; also in "The Methods of Petrographic Microscope Research," Carnegie Institution of Washington Publication 158, 1911.

The special features of this research model are:—

**Large Abbe Aplanatic Condenser**, N. A. 1.40, which, together with an Ahrens prism of 20 mm aperture, can be used both with high power and low power objectives.

**Special Mounting for Polarizer**, which can be swung in and out of axis of microscope at will.

**Large Sensitive Tint Plate mounted in rotating carrier below condenser.** This arrangement is superior in two respects to the usual method of inserting the plate above the objective: the optical system is not disturbed on insertion of the plate; the mounting enables the observer to rotate the sensitive tint plate and thus to vary at will the intensity of field illumination produced by the plate, also to pass from one quadrant to another. In very weakly birefracting minerals it is essential that the field illumination from the sensitive tint plate be very weak; otherwise the faint interference colors from the fine mineral grains, either in parallel or in convergent polarized light, will be veiled and lost to view in the intense illumination of the field produced by the sensitive tint plate in the usual diagonal direction.

**Large Mechanical Stage**, simple in design and construction and practically dust-proof, with a play of 24 mm in two directions at right angles, the divisions on the screw heads reading to 0.01 mm.

## MICROSCOPE, PETROGRAPHICAL (continued)

**Large space between stage and arm,** necessary for manipulation of universal stage and other accessories; also for opaque mineral investigations in reflected light.

**Objective Clamp and rings of case-hardened steel.**

**Device for simultaneous rotation of Nicols.**

**Wide Draw Tube** useful for photomicrographic work.

**Entire analyzer carrier included within body tube** and thus protected from dust. Even when the analyzer is withdrawn from axis of microscope, it is still within the tube.

**Bertrand lens slide accurately constructed** to insure exact centering. Below the Bertrand lens is an iris diaphragm and above it a small lens on an arm, which, together with eyepiece, forms a microscope focused on the plane of the iris diaphragm and enables the observer to bring the image of the object on the stage to coincidence with the plane of the iris diaphragm and thus to insure elimination of stray light from adjacent mineral grains in the case of the measurement of the optic axial angle of a mineral grain or plate in a specimen.

**Rack and Pinion movement for Bertrand lens,** permitting one to raise or lower it and thus change the magnification of an interference figure from one to two diameters.

**Specifications of Stand**

**Arm**—Curved type, providing ample vertical distance from stage to arm of 60 mm; horizontal distance from center of stage to base of arm, 80 mm.

**Tube**—Body tube, 55 mm outside diameter, with inner tube adjustable by rack and pinion (two heads) through a range of 25 mm; inner tube contains a Bertrand lens, with an auxiliary lens above it and an iris diaphragm below it, each adjustable from the right hand side of the body tube; draw tube slides in metal fitting graduated in single millimeters and numbered 100, 170 and 180, taking standard sized (23 mm) eyepieces, which are supplied here with cross-hairs and the eye-lens adjustable for focusing upon them; notch in the upper edge of draw tube fixes azimuth of the eyepiece; within the lower portion of the body tube the analyzer is mounted to slide in and out of the optical axis on the rotating arm; 45° slot in body tube with dust-proof shutter placed just beneath the analyzer for accessories; provided with non-detachable nose-piece, centering by means of two screws working at right angles in N and E positions.

**Focusing Adjustments**—Coarse adjustment by standard rack and pinion; fine adjustment of Bausch-Lomb lever type with micrometer screw head graduated in 100 parts, each equal to .0023 mm in vertical movement, and provided with a vernier screw very fine to follow rise and fall of micrometer head for reading to .0005 mm; mechanism ceases to act when objective touches slide.

**Stage**—Revolving, with clamping device to set in any desired position; circumference graduated in single degrees with each tenth line numbered, the two verniers reading to 0.1°; two additional verniers, also reading to 0.1°, are attached to the support of bar connecting nicols; outside diameter of graduated circle, 112 mm; mounted on the revolving stage is an adjustable stage plate, 95 mm in diameter, with mechanical cross movements actuated by graduated heads set 90° apart, the graduations reading to 0.01 mm; stage aperture, 32 mm, with reducing disc having an aperture of 19 mm.

**Substage**—Adjustable by rack and pinion; carries condenser, iris diaphragm, selenite plate and polarizer.

**Illuminating Apparatus**—Aplanatic condenser, 1.40 N.A., with upper two lenses removable, giving 0.40 N.A. with lower lens alone; placed in fixed substage arm with small set-screw and is easily removable; iris diaphragm below condenser; mirror, plane and concave, 50 mm in diameter, with fork in socket adjustable along substage support.

**Polarizer**—An Ahrens prism in revolving mount attached to swinging arm, permitting complete removal from optical axis; above the polarizer, attached to the iris diaphragm mount, is a revolvable carrier for sensitive tint plate (30 mm outside diameter), either carried in sliding mount allowing withdrawal from, and return to, optical axis.

**Analyzer**—A Thompson prism, revolvable a quarter turn, insliding prism-box, allowing withdrawal from, and return to optical axis entirely within the body tube.

**Simultaneous Rotation of Nicols**—Rigid bar is supported at plane of stage by arms moving through 90°, with two verniers to provide for reading angle of rotation; connection arms, with broad bearing surfaces, extending from analyzer and polarizer carriers engage bar in such a way as to permit free movement of body tube and substage when focusing and to eliminate lost motion; bar is movable in its support for instant release of arms, allowing independent rotation of polarizer or analyzer; a clamping device with milled head on one of the verniers sets the bar support against rotation, to permit the principal nicol planes to be set parallel with cross-hairs of eyepiece and to provide for rotating specimen on stage rather than rotating connected nicols.

**Changing Nosepiece**—Consists of two parts:—the upper one with clamp permanently attached to centering nosepiece, the lower, a ring threaded to take objective; ring and socket in which it fits made of steel for long term service; with ring for each objective quick interchange is provided for.

**Accessories Included**—Bertrand lens, mounted; one selenite plate, mounted, to fit substage; one slide-plate to carry blue glass and ground glass for insertion below condenser iris diaphragm when sensitive tint plate is withdrawn from optical axis.

**Finish**—Principal parts in alcohol-proof black; smaller adjusting heads and bar nickel-plated; graduated circles in German silver.

**Case**—Of hard wood with polished finish, fitted with brass lock and key.

	Outfit	Objectives	Cross-Hair Eyepieces	Quick Changing Nosepiece	Price
40520.	LD	16 mm, 4 mm	7.5X, 10X,	With two rings	\$311.75
40524.	LD	32 mm, 16 mm, 4 mm	7.5X, 10X, 12.5X	With three rings	320.00

For the measurement of the optical constants of mineral grains and plates, the following accessories are essential:

40528.	<b>Universal Holder and Positive Eyepiece</b> to be used with the following accessories.....	15.50
40532.	(a) <b>Graduated Quartz Compensator</b> for the measurement of birefringence.....	17.25
40536.	(b) <b>Bi-Quartz-Wedge Plate</b> for the measurement of extinction angles.....	19.50
40540.	(c) <b>Co-ordinate Grating</b> , 0.1 mm divisions, for the measurement of optic axial angles and for statistical mineral volume analysis after the Rosiwal method or the percentage area method.....	10.00
40544.	(d) <b>Cap Analyzer</b> with 2° graduations for use above positive eyepiece, fitting into recessed plate with means for a sufficient rotary adjustment to permit accurate setting of the index point with zero of the analyzer.....	8.00
40548.	<b>Sliding Stop Eyepiece</b> for the observation of interference figures from fine mineral grains; substituted for regular eyepiece; consists essentially of two adjustable slits at right angles with special eyepiece for focusing on the same.....	12.50
40552.	<b>Adjustable Support</b> for opaque objects; replaces condenser in substage; two adjustable screws set at right angles tilt the table in any direction desired; the object table revolves.....	10.00
40556.	<b>New Model Vertical Illuminator</b> .....	12.00
40560.	<b>Petrographical Objective</b> , 0.95 N. A., 4.5 mm E. F.....	8.00

No. 40564

No. 40572

**MICROSCOPE, BAUSCH AND LOMB PETROGRAPHICAL TYPE LCH.** The features of this new model are the unusually large space provided for manipulation of objects and super-stage accessories; the mounting of rotatable analyzer; the arrangement of the substage parts for quick change from polarized to ordinary and from parallel to convergent light. It is a high-grade instrument combining the efficiency and simplicity of adjustment which are commensurate with the requirements of laboratory work. In designing this instrument the Bausch & Lomb Optical Co., have had the kind assistance of Dr. Wright, of the Carnegie Institution of Washington, D. C.

**Tube**—Body tube, 35 mm outside diameter; draw-tube, sliding in metal fitting, graduated in single millimeters and numbered 160, 170 and 180; having slot for Bertrand lens, with an iris diaphragm above it; taking standard size (23 mm diameter) eyepieces, which are supplied here with cross-hairs and the eye-lens adjustable for focusing upon them; having two notches in upper edge for fixing the azimuth of the eyepiece; analyzer box slides in and out of body tube; slot in body tube with dust proof shutter placed just beneath analyzer for accessories; nosepiece with society screw thread, non-detachable, centering by means of two screws working at right angles in N and E positions.

**Focusing Devices**—Coarse adjustment by standard rack and pinion; fine adjustment of Bausch & Lomb lever type with micrometer screw head graduated in 100 parts, each equal to .0025 mm in vertical movement, and provided with a hinged vernier for reading to .0005 mm, mechanism ceases to act when objective touches slide.

**Stage**—Revolvable; circumference graduated in single degrees with each tenth line numbered, the double vernier reading to one-tenth degree in both directions; diameter of stage outside of graduations 102 mm, inside 90 mm; stage plate, vulcanite-covered, having insaid for orientation two millimeter scales at right angles, 30 mm long, with each tenth line numbered.

**Substage**—Adjustable by long-range quick-acting screw, turning to the left completely clear of the optical axis when screw reaches limit of downward movement; carrying condenser, iris diaphragm and polarizer.

**Illuminating Apparatus**—Three-lens condenser, 1.10 N.A.; upper lenses in swinging arm operated by knurled head at the side, providing for quick change from convergent to parallel light without disturbing any of the other sub-stage parts; iris diaphragm below condenser; mirror plane and concave, 50 mm diameter, on swinging arm with spring clip for central position.

**Polarizer**—A Nicol prism (angular field 19°) in revolving mount graduated in 15 degree parts, each alternate line numbered—0, 30, 60, 90 and so on up to 330; entire mounting with prism removable from optical axis by a double-swing movement to one side.

**Analyzer**—A Thompson prism, revolvable a quarter turn, in sliding-prism-box which carries graduations and indicator allowing withdrawal and return to optical axis without disturbing the reading on scale. Graduations in 5 degree parts, numbered 0, 30, 60 and 90.

**Changing Nosepiece**—As shown in illustration, consists of two parts, the upper one with clamp screwing into centering nosepiece—the lower, a ring threaded to take objective. The ring and the socket in which it fits are made of steel for long service. With a ring for each objective, quick interchange is provided for.

**Accessories Included**—One selenite plate, mounted, one quartz wedge, mounted, one Quarter Undulation plate, mounted, and Bertrand lens, mounted; pinhole cap fitting draw-tube for observation of interference figures after Laskau's method.

**Finish**—Main parts including body-tube in alcohol-proof black, pinion heads and adjacent parts in natural brass color, adjusting heads nickel plated; all graduations in German silver.

**Case**—Of hardwood with polished finish; fitted with brass lock and key.

	Outfit	Objectives	Cross Hair Eyepieces	Quick Changing Nosepieces	Price
40564.	LCH2	16 mm 4 mm	7.5 × 10 ×	With Two Rings	153.65

40572.	Glass Model of Nicol Prism, Vrba, on adjustable support, 30 cm in height, for lecture table use, duty free.				7.35

No. 40576

No. 40580

40576. **Polarization Model, Vrba**, consisting of four metallic rods with crosspieces of various lengths set at right angles thereto and representing:  
 1. The ether vibrations in an ordinary beam of light, i.e. vibrations in various planes.  
 2. " " " " a plain polarized beam of light, i.e. vibrations all in one plane.  
 3. " " " " a circular polarized beam of light, i.e. vibrations in a spiral plane, laevo-rotary.  
 4. " " " " a circular polarized beam of light, i.e. vibrations in a spiral plane, dextro-rotary.  
 Set of 4 models ..... 6.50  
 40580. **Glass Rhombohedron, Busz**, for demonstration of double refraction in calc spar, on adjustable support with base, duty free ..... 6.75

No. 40584

40584. **Models of Crystal Axes**, a set of six wooden axes showing the axial arrangement of each of the six crystal systems, 15 cm size. When ordered with models, duty free ..... 4.50  
 40588. **Models of Crystal Axes**, as above, 25 cm size, duty free ..... 6.30

No. 40592

40592. **Models of Crystal Axes**, consisting of a set of six metal supports with colored silk threads to indicate positions of surfaces. The models are 38 cm in size, with supports and are very well suited for lecture table demonstrations, duty free ..... 24.00  
 40596. **Models of Crystal Axes**, as above, 50 cm size, duty free ..... 30.00

No. 40600

40600. **Crystal Models, Pear Wood**, consisting of a set of 30 models demonstrating the simpler fundamental forms of the six crystal systems as follows:—

I. Regular, Nos. 1 to 13.

II. Hexagonal, Nos. 14 to 19.

III. Tetragonal, Nos. 20 to 23.

IV. Rhombic, Nos. 24 to 27.

V. Monosymmetrical, Nos. 28 and 29.

VI. Asymmetrical, No. 30.

Models, as above, with 5 cm models, in polished compartment case, **from stock** ..... 10.00

“ “ “ “ 10 cm “ “ “ “ **duty free**..... 18.75

40604. **Crystal Models, Pear Wood**, consisting of a set of 20 models supplementing the preceding set of 30 and which add some of the more ordinary combinations and twin developments.

Models, as above, 5 cm size, in polished compartment case, **from stock**..... 12.00

“ “ “ “ 10 cm “ “ “ “ **duty free**..... 17.40

40608. **Crystal Models, Pear Wood**, lecture table set of 30 models, each of 20 to 25 cm size, with blackened surfaces for marking with crayons. The arrangement of the models is exactly the same as in set No. 40600. Imported to order only, **duty free**..... 24.60

40612. **Crystal Models, Pear Wood, Hintze**, consisting of a set of 80 models including the holohedral, hemihedral and tetartohedral forms, to which are added the designations of the new arrangement by Groth, *Physikal. Krystallographie*, 4. Aufl. and Liebisch, *Grundriss der physikal. Krystallographie* 1896.

Models, as above, 5 cm size, in polished compartment case, **duty free**..... 21.60

“ “ “ “ 10 “ “ “ “ **duty free**..... 60.00

No. 40616

40616. **Crystal Models, Glass**, with colored silk axes, consisting of a set of six models representing the six crystal systems with a typical form of large size, i.e., 20 to 25 cm, from each system; specially adapted for lecture table use. In case without supports, **from stock** ..... 9.00

No. 40620

No. 40652

No. 40660

40620. Crystal Models, Glass, consisting of a set of 15 models of the same size and execution as the above but representing the more important fundamental forms of the six systems. In polished wood case; duty free..... 14.40

Crystal Models, Glass, consisting of a set of 98 of the same size as above, i.e., 20 to 25 cm, and same execution as the preceding sets, composed of six separate collections which may, if desired be ordered separately as follows:

40624. Crystal Models, Set B, 14 models showing the simpler pyramidal and prismatic forms of the six crystal systems and their relative position to each other. In polished wood case. Duty free.... 13.20
40628. Crystal Models, Set D, 30 models showing the simpler fundamental forms, with colored axes in polished wood case. Duty free..... 34.20
40632. Crystal Models, Set E, 10 models showing the simpler hemihedral forms, the holohedral form being made of cardboard and enclosed in the former. In polished wooden case. Duty free.... 16.80
40636. Crystal Models, Set F, 18 models showing the simpler combinations; in polished wooden case. Duty free..... 30.00
40640. Crystal Models, Set G, 16 models showing the complex crystals of holohedral and hemihedral forms. The combination is made of cardboard and is shown inside the glass model which corresponds to the faces of the simpler form of the combination. In polished wooden case. Duty free..... 26.70
40644. Crystal Models, Set H, 10 models of twin crystals arranged so that each part may be rotated about the twinning axis. In polished wooden case. Duty free..... 20.40
40648. Complete Set of 98 Models, consisting of six collections as above, without boxes and if ordered at one time, duty free..... 108.00
40652. Crystal Models, Cardboard, Vrba. These models are of the large lecture table size, i.e., 16 to 25 cm. and are stoutly made of sized cardboard with yellow faces and black binding. Complete arrangement of 60 models, duty free..... 40.50
40656. Crystal Models, Cardboard, Vrba, as above, but a smaller set consisting of 30 representative models, duty free..... 21.00
- Note—For large collections of 520 models arranged by Vrba, send for Krantz special catalogue No. 11.
40660. Supports for Crystal Models, Vrba, a three-arm support for simultaneously displaying three large glass or cardboard models. When ordered with models, duty free..... 3.60
40664. Supports for Crystal Models, Krantz, a new set of ten holders on individual bases, suitable for demonstrating all ordinary forms; duty free..... 13.50
40668. Supports for Crystal Models, a simplified set to support the six principal forms, on adjustable support with base, duty free..... 9.00

40908.	Needle, Inoculating, a glass rod with 1½ inches of No. 26 platinum wire fused in end.	.50
40912.	Needle, Inoculating, same as above but with 3½ inches of No. 24 platinum wire.	1.00
40916.	Needle, Inoculating, Kolle, consisting of a holder entirely of aluminum with a non-conducting inset to prevent extreme end from heating, without platinum loop.	.80
40920.	Needle, Inoculating, Kolle, new form, with demountable hard rubber handle, without platinum loop.	1.20
40924.	Needles, Inoculating, Ravenel, consisting of No. 24 platinum wire securely mounted in an aluminum rod with protecting cover made of a glass tube with one end closed. Furnished either with a straight needle or twisted loop. Style.....	Straight Twisted
	Each.....	.80 1.50
40928.	Needle, Inoculating, Rosenberger, consisting of a rosewood handle with clamp for conveniently inserting platinum wire.	.50
40932.	Needle, Inoculating, same as above, but with 1½ inches of No. 26 platinum wire.	.75
40936.	"Platinid" Wire, as recommended by Neisser for use in inoculating needles because of the present high price of platinum. Per foot.....	.10

# APPARATUS FOR THE DETERMINATION OF NITROGEN

No. 40960

No. 40968

40960.	Kjeldahl Distilling Apparatus, complete, consisting of No. 40964 Condenser with block tin tubes and Burner Shelf No. 40968. With burners but without glass flasks or connecting tubes.	
	Number of burners.....	6 10
	Each.....	42.00 60.00
40964.	Kjeldahl Condenser, only, of copper, with coils of block tin, as shown in Kjeldahl outfit No. 40960.	
	Number of coils.....	6 10
	Each.....	28.00 42.50
40968.	Kjeldahl Digesting Shelf with burners, with iron support for the necks of the flasks when used for digestions. This is identical with the distilling shelf used in outfit No. 40960.	
	Number of burners.....	6 10
	Each.....	17.50 24.00

No. 40972

No. 40976

No. 40982

No. 40984

No. 40988

40972.	Kjeldahl Digesting Shelf, Electric, same as No. 40963 but with individual electric heaters. Voltage must be stated in ordering. Number of heaters.....	6	10	
	Each.....	40.00		64.00
40976.	Kjeldahl Distilling Apparatus, improved form, made to hang on the wall. A very convenient apparatus for food chemists in the determination of ammonia and nitrogen. The burners, flasks and receivers are handled from the front and without interference. The burners are adjustable and may be used with natural, illuminating or gasoline gas. Condenser of heavy copper with block tin tubes. With six burners, but without glassware.....			60.00
40980.	Kjeldahl Distilling Apparatus, same as above but with support to stand on table. With six burners.			63.00
40984.	Kjeldahl Distilling Apparatus, Folin Modification, of heavy tinned copper, with quickly removable, adjustable and interchangeable ring supports of both 4 and 5 inch diameter. The copper still proper is bolted between cast iron end brackets by which the entire apparatus is fastened to the wall. Number of burners.....	6	12	
	Each.....	35.00		60.00
	Extra Rings 5 inch, Each.....			.30
	" 4 " Each.....			.25
40988.	Kjeldahl Digesting Rack, Folin Modification, which obviates the use of a shelf as the burners and bulb rack are a self-contained unit. Supports for the necks of the flasks are not regularly included because it is better to allow the necks to rest directly in the lead pipe connected with ventilating tube. Individual supports are furnished extra if desired. Number of burners.....	6	12	
	Each.....	15.00		25.00
40989.	Individual Rack Supports for necks of flasks, each.....			.20
40992.	Kjeldahl Digesting Shelf, Johnson, as used in the Connecticut Agricultural Experiment Station. Of heavy cast iron. The flask heaters are 4 1/2 inches apart from center to center and the flasks are supported by placing their necks within the openings in the large lead pipe which should be connected with the ventilating system. Each burner is furnished with stopcock and the price includes the lead pipe, 4 inches in diameter, on separate stand. Number of burners.....	6	10	13
	Each.....	34.00	44.00	50.00
40996.	Kjeldahl Digesting Shelf only as listed in above outfit, without lead pipe or glassware. Number of burners.....	6	10	13
	Each.....	24.00	30.00	33.50

No. 41048

No. 41080

No. 41084

No. 41092

41048. Nitrometer, Dupont, latest modification. For original description see *Journal of the Society of Chemical Industry*, 1900, p. 182. As used by the manufacturers of explosives. Glass parts only, without support..... 18.75

41052. B. Compensating Tube, only.....	1.75
41056. C. Large Measuring Tube, only.....	4.00
41060. D. Nitrogen Bulb, only.....	5.00
41064. E. Levelling Reservoir, only.....	.75
41068. J. Reaction Bulb, only.....	6.00
41072. K. Three-way Tube, only.....	.50

41076. L. Large Iron Support with six uprights fitted with rings. Rack and pinion movement for leveling bulb, etc. Made to order only.....	50.00
--	-------

Note—For suitable tubing for use with above see our No. 46225.

41080. Nitrometer, Lunge, with rubber tubing, but without support. Capacity, .50 cc in  $\frac{1}{10}$ ths. 100 cc in  $\frac{1}{10}$ ths. Each..... 4.00 4.50

41084. Nitrometer, Lunge, as used in the determination of nitrogen in gun powder, nitro-glycerine, dynamite etc. Graduated from 100 to 140 cc in  $\frac{1}{10}$ ths. With rubber connection but without support. 6.00

41088. Nitrometer, Lunge, same as No. 41084 but complete with support and clamps..... 10.00

41092. " Schiff, graduated to 100 cc in  $\frac{1}{10}$ ths, on support, with reservoir, special clamp and rubber tubing..... 7.00

41096. Apparatus for the Gasometric Determination of Aliphatic Amino Groups, Van Slyke. See *Journal of Biological Chemistry* XII, p. 275, 1911, and XVI, p. 121, 1913, also *Abderhalden's Handbuch der biochemischen Arbeitsmethoden*, V, p. 395, and VI, p. 278. The nitrogen gas evolved from amino groups and nitrous acid in the reaction  $\text{RNH}_2 + \text{HNO}_2 = \text{ROH} + \text{H}_2\text{O} + \text{N}_2$  is purified and accurately measured in a gas burette. A complete determination of the  $\text{NH}_2$  nitrogen of amino acids requires but six to ten minutes, and the accuracy is equal to that of a Kjeldahl determination. An indefinite number of successive determinations can be performed without disconnecting any of the parts. The apparatus permits analysis of any volume of solution up to 10 cc and give results with an accuracy of  $\frac{1}{10}$ th mg. of nitrogen. This method has been applied to varied problems, among which are study of protein digestion, both *in vitro* and *in vivo*; the determination of the nature of the amino acids yielded by hydrolysis of small amounts of protein, determination of free amino groups in fixing the constitution of various organic substances; and the determination of amino acid nitrogen in urine, blood and tissues. Complete with glass parts and supports, pulley, shaking device, etc., but without motor..... 25.00

Extra glass parts

41100. Reaction Vessel with filling funnel, burette and three glass stop-cocks..... 8.75

41104. Gas Burette, Schellbach, with three-way cock, levelling bulb and tubing..... 4.50

41108. Gas Pipette, new form, for shaking..... 1.50

Note—We recommend our Motor No. 40884 suitable for connection to house circuit instead of that shown in the illustration which is intended to work on accumulators.

No. 41096

# OIL TESTING APPARATUS

41200.	Fire Tester, Elliott, for the flashing point of illuminating oil, only. With thermometer.....	11.70
41204.	Fire Tester Foster, for the flashing point of illuminating oil only. With thermometer.....	13.50
41208.	Fire Tester, open form, for the flash point of illuminating oil, with thermometer.....	5.85
41212.	Fire Tester, Cleveland open form, small size, complete with thermometer.....	9.00
41216.	" " " " large model, a most substantial tester. Complete with thermometer 50° to 640° F., alcohol lamp and Bunsen burner.....	13.50

No. 41220

41220.	Flash Point Tester, Abel-Pensky, for petroleum, latest model, with clockwork for opening cover and for depressing the test flame, with certificate of the Kaiserlichen Normal-Eichungs-Kommission; with one standard thermometer 10-55° C. and one 50-75° C. and aneroid barometer 65.00	
41224.	Standard Thermometer only for above, 10-55° C., with metal fitting and P. T. R. certificate .....	4.50
41228.	Standard Thermometer only for above, 50-75° C., with metal fitting and P. T. R. certificate.....	4.50
41232.	Flash Point Tester, Abel-Pensky, for both high and low temperatures. This outfit is identical with No. 41220 except that the joints of the heating bath are hard brazed and it is supplied with an additional pair of thermometers for high temperatures, i. e. one from 50-160° C. for the oil bath and one from 70-200° C. for the water bath, and is arranged for both gas heating and gas ignition, with certificate of the Kaiserlichen Normal-Eichungs-Kommission .....	80.00
41236.	Thermometer, only, for above, 50-160° C.....	4.00
41240.	" " " " 70-200° C.....	4.00
41244.	Flash Point Tester, Abel-Pensky, for benzene, benzole, etc., with oil cup, similar in arrangement to No. 41220 and with two thermometers - 30 to + 40°C.....	40.00
41248.	Thermometer only for above - 30 to + 40° C.....	3.50

No. 41252

No. 41268

No. 41272

41252. Flash Point Tester, Pensky-Martens, for heavy oils, latest model, for gas heating, with thermometer from 80-250° C. .... 45.00
41256. Thermometer, only, for above, 80-250° C., with P. T. R. certificate. .... 6.50
41260. " " " " 40-160° C., " " " " for low temperatures. .... 5.00
41264. " " " " 200-400° C., " " " " " high " .... 8.00
41268. Flash Point Tester, Pensky-Martens, for heavy oils, exactly the same as No. 41252 but with electric heating and ignition; for either 110 or 220 volt circuit. Voltage must be specified in ordering. With adjustable resistance, connecting cord, socket and switch and one certified thermometer 80-250° C. With this electric heating device the crucible may be heated to 100° C. in seven minutes and to 400° C. in twenty-five minutes. .... 110.00
41272. Flash Point Tester, open crucible form, for gas heating and gas ignition; with one thermometer from 80 to 280° C., porcelain crucible and adjustable burner. .... 22.50

No. 41276

No. 41280

41276. Flash Point Tester, U. S. Bureau of Mines Model, for low burning oils, complete with three thermometers, aneroid barometer, instructions and portable carrying case. .... 135.00
41280. Flash Point Tester, U. S. Bureau of Mines Model, for high burning oil, with two thermometers and instructions, in portable case. .... 120.00

No. 41321

No. 41300

No. 41284

No. 41328

No. 41312

No. 41316

41284. Flash Point Tester, same as No. 41280 but with electric heating, for either 110 or 220 volts. Voltage must be specified in ordering; with adjustable resistance, switch, socket and cord. . . . . 65.00
41288. Thermometer only for either No. 41280 or No. 41284, 80-280° C. . . . . 4.50
41292. " " " " " " " " 180-400° C. . . . . 5.00
41296. Porcelain Crucible only for either of above. . . . . .45
41300. Viscosimeter, Scott. Each instrument is standardized and has stamped upon the handle the time in seconds and fractions of seconds required for 50 cc of distilled water at 70° F. to be discharged. Complete with thermometer to 212° F. in single degrees and 50 cc graduated cylinder. . . . . 15.00
41304. Thermometer for above, 212° F. in single degrees. . . . . 1.50
41308. Thermometer for lubricating oils, 50° to 120° F. in 1/10th degrees. . . . . 5.00
41312. Viscosity Pipette, Dudley, delivering 100 cc of distilled water in 35 seconds at a temperature of 100° F. . . . . 1.25
41316. Viscosimeter, Redwood, original English make, for testing the viscosity of oils and as adopted by the British Mineral Oil Association. With certificate of verification by Mr. J. A. Hicks, assistant to Sir Boverton Redwood. Complete with thermometers. . . . . 45.00
41320. Thermometers for No. 41316, 340 to 300° F. Per pair. . . . . 6.00
41324. Leptometer, for the direct comparison of the viscosity of two oils simultaneously and under equal conditions. . . . . 40.00
41328. Viscosimeter, Stormer, new model. This instrument is constructed upon the principle of rotating a cylinder in the liquid under examination with a constant weight and at a known temperature. A revolution counter is connected and the time required for the cylinder to make a specified number of revolutions in distilled water and the substance under examination form the basis of comparison, or in other words, give a means for determining the viscosity of a liquid, with directions for use. . . . . 30.00

No. 41332

No. 41340

No. 41356

No. 41352

41332. Viscosimeter, Doolittle Torsion, improved, for measuring the viscosity or fluidity of oils, varnish, starch, glucose, glue, or any fluid whether containing solid particles in suspension or not. See *Journal of the American Chemical Society*, Vol. XV, 1893, pp. 172 and 145. Complete..... 75.00
41336. Viscosimeter, Saybolt Universal, original make and design..... 60.00
41340. Viscosimeter, Saybolt Universal, Improved Model, for testing cylinder, valve and similar oils with bath at 212° F and the oil at 210° F, for reduced black oils with oil at 130° F and for testing neutral, spindle, paraffine, red and other distilled oils with oil at 100° F or with oil at any temperature from 70° F to 212° F. The Viscosimeter is now furnished with an electric heating element for either 110 or 220 volt lighting circuit with cord and plug for lamp socket (voltage must be specified in ordering) and is also furnished with the usual gas heating arrangement as shown in illustration and also with a U-tube steam heater ..... 75.00
41344. Extra Flask, graduated, 60 cc capacity..... 1.25
41348. Extra Thermometers, each..... 1.75
41352. Viscosimeter, Engler, with gold plated oil cup and platinum outlet tube, two certified thermometers, 10-50° C. and 10-150° C., ring burner, tripod and 200 cc certified flask with one mark; with certificate of the Kaiserlichen Normal-Eichungs-Kommission..... 38.00

No. 41360

41356. Viscosimeter, Engler, for High Temperatures, similar to No. 41352 but with hand brazed bath and enclosed steam jacket; with two certified thermometers, 180-300° C and 200 cc certified flask with one mark, tripod and ring burner; with certificate of the Kaiserlichen Normal-Eichungs-Kommission ..... 55.00
41360. Viscosimeter, Engler, Improved Model, according to the specifications of the Petroleum Congress. This instrument differs from No. 41352 in that the oil bath is totally immersed in the water bath and the lid of the oil bath is doubled walled. The water bath is also provided with a stirrer D. The water bath is wider, permitting a more constant temperature and the special device F is provided to control the opening of the outlet tubulation; with two certified thermometers, 10-50° C and 10-150° C, 200 cc certified flask with two marks, tripod and ring burner; with certificate of the Kaiserlichen Normal-Eichungs-Kommission. .... 46.50

No. 41364

No. 41368

No. 41372

41364. **Viscosimeter, Engler, Improved Model for Electric Heating.** With two certified thermometers, 10-50° C and 10-150° C, adjustable resistance for maintenance of constant temperature, 200 cc certified flask with two marks, tripod; and certificate of the Kaiserlichen Normal-Eichungs Kommission. *Voltage must be specified in ordering.* 86.25
41368. **Viscosimeter, Engler, Improved Model for High Temperatures, for Electric Heating,** with enclosed bath in asbestos jacket, deflator and outlet stopcock, with two certified thermometers, 100-300° C and 100-350° C, tripod, 200 cc certified flask with two marks and adjustable resistance. With certificate of the Kaiserlichen Normal Eichungs Kommission. *Voltage must be specified in ordering.* 101.50
41372. **Viscosimeter, Engler, Improved Model, for Small Quantities.** 20 cc of oil is required for the test instead of 200 cc. By this arrangement much time is saved in the testing of thick oils by diminishing the time of outflow. Otherwise the instrument is similar to No. 41360. With 2 certified flasks, one of 200 cc with two marks and one of 20 cc with one mark; with support, tripod, gas burner and 2 certified thermometers. 10-50° C and 10-150° C. With certificate of the Kaiserlichen Normal-Eichungs Kommission. 70.00
41376. **Viscosimeter, Engler, for Electric Heating.** Otherwise as above, with adjustable resistance, and certificate of the Kaiserlichen Normal-Eichungs Kommission. *Voltage must be specified in ordering.* 109.50

No. 41388

41380. **Viscosimeter, Ubbelohde, for Illuminating Oils,** for the testing of which the regular Engler Viscosimeter is not well adapted. The oil cup is wider and the same is provided with an overflow tube for bringing the oil to the correct height and the outlet tube is of greater length and of smaller diameter than for lubricating oils; with two certified thermometers 50° and 100° C, 100 cc certified flask with one mark, gas burner and tripod. 34.50
41384. **Viscosimeter, Ubbelohde, for Illuminating Oils, for Electric Heating.** Otherwise as above. With adjustable resistance. *Voltage must be specified in ordering.* 74.25
41388. **Viscosimeter, Ubbelohde, for Cylinder Oils.** This is similar in construction to the Petroleum Viscosimeter No. 41380 but the joints are hard brazed for high temperatures and the water jacket is enclosed in asbestos and furnished with cover and stirring device. With two certified thermometers, 100-300° C and 180-300° C, measuring flask 100 cc with one mark, tripod and ring burner. 47.50
41392. **Viscosimeter, Ubbelohde, for Cylinder Oils, for Electric Heating.** Otherwise as above. With adjustable resistance. *Voltage must be specified in ordering.* 86.75

No. 41681

No. 41688

- 41684. Oven, Electric,** with automatic expanding disc temperature regulator and magnetic circuit breaker. Of heavy asbestos board mounted in solid brass frame, giving a durable and rigid construction. Heating units are wound on hard porcelain and are easily replaceable, as is the expanding disc. The temperature control will regulate within 1° or 2° C. over long periods of time and is recommended as a thoroughly practical and satisfactory utensil which we have supplied to many important laboratories. Works equally well on direct or alternating current. Inside dimensions 16 x 10 x 9 inches. As regularly sent out the expanding disc will regulate from 75° C. to 160° C. Special windings of heating units and special capsules for other ranges of temperature, when desired. With diagram of connections and full information for operating.
- |                   |       |       |

| Each .....        | 70.00 | 72.00 |

**OVENS, FREAS PATENT ELECTRIC,** with temperature control, as approved by the National Board of Fire Underwriters. May be set for any temperature desired from a degree or so above room temperatures to 175° C. Made of heavy, fire-proof asbestos wood which is not attacked by acids or alkalis. The temperature indicator is set at the temperature desired by turning the milled head as shown in illustration. The metal fittings of door, base, etc., are of aluminum. When ordering please state voltage and current of circuit on which oven is to be operated.

- 41688. Oven, Freas Patent Electric No. 100.** Size of chamber 12 x 12 x 12 inches. Mounted on cast iron base for placing on table. Complete with flexible cord and plug to attach to regular lighting circuit. .... 75.00
- 41692. Oven, Freas Patent Electric No. 110.** Inside dimensions 14 x 17 x 18 inches. Mounted on heavy iron base with legs, total height 5 ft. Complete with flexible cord and plug. .... 165.00
- 41696. Oven, Freas Patent Electric No. 114,** same as No. 110 but graduated for temperatures up to 500° F. as used in the evaporating tests of asphalt, etc. .... 175.00

No. 41700

- 41700. Oven, Hearson Electric,** specially designed for rapidly ascertaining the percentage of moisture in flour, tobacco, seeds and similar material. The oven is regularly sent out for operation at 115° C. but may be adjusted from 15° C. to 150° C. The air in the inner compartment is uniformly heated and passes over the trays containing the samples to be tested, taking up in its passage the moisture which is driven off, the whole being discharged through outlets at the back of the apparatus; with Hearson's Patent Capsule by means of which temperature variation may be kept to within 1° C. Inside dimensions 6 x 11 x 11 inches. Complete with thermostat, capsule, thermometer, two shelves, eight trays, wall plug and 3 ft. of flexible cord. Please specify voltage in ordering.

**OVENS, DESPATCH, ELECTRIC.** This series of Ovens is constructed of polished steel with nickel plated angle iron corner fittings and walls of asbestos from 1 to 2 inches apart, depending upon the size of the oven, packed with mineral wool. They have open wire heating units guaranteed not to burn out or crack. The alloy from which this wire is made does not oxidize at high temperatures or become brittle with repeated heating and cooling. These Ovens are provided with ventilators at both top and bottom designed especially for the carrying off of moisture, as in drying out of samples, thus expediting the drying process and enabling a very accurate temperature control without the use of a thermostat or other regulating device. The ovens are all provided with a three-heat switch and by adjustment of the ventilator the temperature can be maintained from 90° to 100° C. on the low point, 100° to 108° C. on the middle point and 140° to 150° C. on the high point, 150° C. being the highest temperature for which they are regularly built. The current consumption is exceedingly small, as will be noted from the data given below. These Ovens are widely used in the moisture test of soils, etc., Pekar slick tests in flour and baking laboratories and for testing sulphite in pulp mills as to moisture. The Ovens operate equally well on direct or alternating current but voltage must be specified in ordering.

41708. **Oven, Despatch, Electric**, as above described, with glass window for observation of the material during drying, with drying space 16 x 7 x 8 inches; current consumption 75-150-300 Watts.... 32.00

41712. **Ovens, Despatch, Electric**, as above, with removable shelves and thermometer.

41772. **Oven, Double Wall, for Vacuum, cylindrical form, with heavy plate glass at each end and door fastened by clamps.** With thermometer in metal mounting, manometer, reflux condenser and two removable shelves. For gas heating. Size 180 x 410 mm.  
 Duty Free..... 66.00      Duty Paid..... 88.00
41776. **Oven, Double Wall, for Vacuum, of the same general construction as No. 41772 but extra large size, i.e., 600 x 300 mm inside dimensions.** Massive construction with heavy plate glass at each end. May be fitted for direct steam heating without extra cost. With gauge and reflux condenser.  
 Duty Free..... 125.25      Duty Paid..... 155.00

No. 41780

#### 41780. Oven, Vacuum, Hearson Electric.

This apparatus consists of an inner cylindrical chamber, the exposed end of which is furnished with a loose cover which can be clamped to this end of it in order to hermetically close it when it is desired to exhaust the air.

The inner cylinder is surrounded by another cylinder of larger capacity, which is filled with paraffine (not oil). In the space between the two vessels there is also, coiled around the inner cylinder, a long fine copper tube one end of which terminates in the inner cylinder, whilst the other end is furnished with a small valve which will be found on the left-hand side below the apparatus. Another small tube connected with and terminating in the inner cylinder will be found on the right-hand side also below the apparatus.

The regulator and the thermometer both dip into the vessel of molten paraffine in which the inner vessel and copper tube are both also submerged. It will be found in practice that the inside temperature indicated by self-registering thermometers, is about

3 degrees above that shown on the scale of the thermometer outside when the inside is at 248 degrees Fah., allowance can be made accordingly if considered necessary.

The asbestos gaskets which serve to lute the cover should be painted frequently with black-lead mixed with turpentine. Air admitted to the inner cylinder through the small valve on the left is compelled to traverse the long length of copper tube before reaching the cylinder into which it is admitted at the back at practically the same temperature as that already in the interior. When the desired temperature is reached the electrical energy required to maintain it is only 60 Watts.

# PHYSICAL-CHEMISTRY APPARATUS

Apparatus for the Determination of Molecular Weight

Apparatus for the Determination of the Conductivity of Electrolytes (Dielectric Constant)

Apparatus for the Determination of Electro-Motive Force by the Potentiometer Method

Ostwald Viscosity Outfits, etc., etc.

No. 42300

No. 42308

42300. Molecular Weight Determination Apparatus, Beckmann, by Depression of the Freezing Point. See *Zeitschrift für Physikalische Chemie*, Band II, Seite 638 und Band VII, Seite 323-330. Complete outfit consisting of the following:—

Cooling Jar, with nickel plated cover, stirrer, four air jackets, four freezing tubes with corks, three filling pipettes, one freezing rod and one rubber stopper.

Zinc Trough, with glass syphon to draw off cooling mixture.

Thermometer for the cooling mixture from  $-20$  to  $+40^{\circ}\text{C}$ . in single degrees.

Stirrer, for the solution, of glass with platinum ring (approximately 2.1 grams of platinum).

Sulphuric Acid Tube. When hygroscopic solutions are investigated the stirrer passes through this tube which should then be filled with sulphuric acid and attached to a filter pump with drying cylinders in order to obtain a current of dry air for the determination.

Thermometer, Beckmann Differential, with auxiliary scale, range  $5$  to  $6^{\circ}\text{C}$ . in  $\frac{1}{100}$ ths. (No. 48276.)

Reading Device for Beckmann Thermometer. (No. 48276.)

Duty Free..... 23.00

Duty Paid..... 31.50

42301. Molecular Weight Determination Apparatus, complete as above, but without Beckmann Differential Thermometer.

Duty Free..... 12.10

Duty Paid..... 16.50

42308. Molecular Weight Determination Apparatus, Beckmann, by the Depression of the Freezing Point, for Hygroscopic Solutions, with freezing tube hermetically closed against the moisture of the air and the stirrer operated by electromagnet. See *Zeitschrift für Physikalische Chemie* Band XXI Seite 240 und Band XLIV Seite 169-184. The outfit consists of the following:

Cooling Vessel, with nickel cover, stirrer, four air jackets, four freezing tubes with corks, three filling pipettes, one freezing rod and two rubber stoppers.

Thermometer, for the cooling mixture, from  $-20$  to  $+40^{\circ}\text{C}$ . in single degrees.

Stirrer, of platinum, mounted on enamelled iron ring for operation by electromagnet. Approximately 3.20 grams of platinum.

Electromagnet, for operating stirrer.

Thermometer, Beckmann Differential, with auxiliary scale, range  $5$  to  $6^{\circ}\text{C}$ . in  $\frac{1}{100}$ ths. (No. 48288.)

Accumulator.

Metronome Contact Break, with clock-work running 40 minutes and platinum contact.

Spark Conductor, to suppress the first spark at the metronome break in order to protect the contact.

Duty Free..... 33.60

Duty Paid..... 45.80

42312. Molecular Weight Determination Apparatus, outfit complete as above but without Beckmann Differential Thermometer.

Duty Free..... 22.75

Duty Paid..... 30.95

No. 42364

42364. Apparatus for the Determination of the Conductivity of Electrolytes (Dielectric Constant), Kohlrausch-Ostwald, as used in the Leipzig laboratories. See *Phys.-chem. Mess.*, 3 Auflage, Seite 461. Outfit consists of the following:-

Conductivity Vessel, Ostwald, of Jena glass, with electrodes 15 mm diameter; platinum weight approximately 2.2 grams.  
 Constant Temperature Bath, Ostwald, 25 cm diameter and 25 cm high; with felt jacket, micro burner, two toluol regulators with supports and thermometer.  
 Support for conductivity vessels, with removable base and clamp for hanging in thermostat.  
 Thermometer, 0-60° C. in  $\frac{1}{10}$ ths.  
 Induction Coil, simple form, with felt insulation under base.  
 Condenser for use with above induction coil.  
 Storage Battery, without solution, capacity 10 ampere hours.  
 Contact Key, with three binding posts, on polished wood base.  
 Slide Wire Bridge, with scale 1 meter long divided into millimeters, model of the Phys.-chemischen Institute, Leipzig.  
 Telephone, for use with slide wire bridge.  
 Resistance Box, from 0.1 to 500 ohms, with 17 coils, giving a total resistance of 1111.1 ohms, quality A, in accordance with the requirements of the Physikalisch-Technische Reichsanstalt.

**42476. Constant Temperature Bath, Freas, Sensitive Water**, designed to furnish a continuous constant temperature for the range of temperature on the lower limit of the available hydrant water supply and on the upper limit of about 50° C. in a room of ordinary temperature. The extreme accuracy and small variation, which does not exceed .002° makes the thermostat especially suitable for the refined measurements of Physical Chemistry, botanical investigations, exact specific gravity determinations, etc. The apparatus consists of a well insulated tank of 340 liters water capacity, provided with spacious glass windows for observations and perforated shelf on which the experimental work can be placed. The tank is equipped with a stirring device and a mercury regulator which controls the heat through a thermal relay; long cylindrical filament lamps with low thermal capacity and motor suspended on adjustable springs to eliminate vibratory noise and vibration; device for maintaining constant water level and device for cooling the water in the tank when the room temperature is too great. Complete with regulator (without mercury) motor, etc., ready for connection with water supply, drain and current. Further description, price and illustration on application.

**42480. Thermometers, Ostwald**, specially made for use in constant temperature baths, as used in Physical Chemistry, etc. With enclosed milk glass scale.

Range..... +10° to +30° C. 0 to +60° C. +50 to +105° C. +100 to +150° C.

- 42524. Inductium** " " " "..... 12.00
- 42528. Set of Pure Resistances, Leeds & Northrup**, with four coils, 1-5000 ohms, 1-10000 ohms and 2-20000 ohms. These coils are wound according to the specifications of the U. S. Bureau of Standards for pure resistances, i.e. resistances without any appreciable capacity or induction effect. See *Bulletin of the U. S. Bureau of Standards*, Vol. 8, p. 495. Bifilar winding gives very good results in coils of 1000 ohms or less, but in electrolytic work errors due to capacity and inductance become appreciable when using coils of higher values wound in that manner. Therefore, it is recommended that, when high resistances are required, this box be used in conjunction with one or the other of those previously listed. Each coil is connected to two small binding posts on the top rubber plate in order to keep the capacity of the connections at a minimum..... 50.00

No. 42532

No. 42560A

No. 42560B

No. 42560C

42532. **Slide Wire Bridge, Kohlrausch, Leeds & Northrup**, with extension coils specially designed for use in the measurement of electrolytic resistances. The slide wire resistance is about 25 ohms and end coils are provided to increase the effective length of the slide wire. These coils are exactly  $4\frac{1}{2}$  times the resistance of the slide wire so that the slide wire is  $\frac{1}{50}$ th of the total resistance. The position of the contact is read by means of the vertical glass scale which reads complete turns and also by the scale on the periphery of the hood, which latter is divided into 100 parts, each division being about 6 mm. These divisions are further subdivided into halves so that it is possible to estimate to  $\frac{1}{1000}$ th of a complete revolution or to  $\frac{1}{10000}$ th of the total motion of the contact point. Used and recommended by many leading Physical Chemists. .... 68.00
42536. **Standard Resistance Box, Leeds & Northrup**, with coils .5, 1, 2, 3, 4, 10, 20, 30, 40, 100, 200, 300, 400, 1000 ohms. An infinity plug is also provided. The coils are arranged on the plug out plan and are guaranteed to be accurate to within  $\frac{1}{2}\%$ . The coils are bifilar wound and are practically free from capacity and inductance, and are particularly recommended for use in the measurement of electrolytic resistances. The wire used is of manganin which has a very low temperature coefficient. The accuracy of the coils is, therefore, practically unaffected by ordinary changes in temperature. The blocks and plugs are large, insuring good plug contacts. .... 85.00
42540. **Standard Resistance Box, Leeds & Northrup**, similar to No. 42536 but containing the following coils; .5, 1, 2, 3, 4, 10, 20, 30, 40, 100, 200, 300, 400, 1000, 2000, 3000, 4000, 10000 ohms, and an infinity plug. .... 100.00
42544. **Induction Coil for Electrolytic Measurements, Leeds & Northrup**, with extreme rigidity of the vibrator so that it will operate in spite of mechanical vibrations and short circuiting of the secondary coil. The vibrator is provided with a slow motion set screw so that fine adjustments are possible. Operates on a single cell of storage battery and is enclosed in a felt lined case, and consequently makes very little noise. .... 20.00
42548. **Head Band Telephone Receiver, Leeds & Northrup**, specially made for laboratory work, unusually sensitive and with strong permanent magnets. The receiver is thoroughly insulated from the head bands which are strong and light in weight. With 6 ft. of flexible cord. .... 5.00

No. 42552

42552. **Resistance Box, Otto Wolff**, in decades with plug connection. Decades 10 x 1000 with a total resistance of 100,000 ohms. Of manganin wire.  
Duty Free ..... 49.50  
Duty Paid ..... 66.00
42556. **Platinizing Solution**, according to Kohlrausch and Holborn, consisting of a 3% solution of platonic chloride and  $\frac{1}{10}$ th of 1% solution of lead acetate. In 50 cc bottles, per bottle. .... 2.50
42560. **Binding Posts, Ostwald**. Sheet or wire can be held equally tight.

No. 42564

42564. Apparatus for the Determination of Electro-motive Force by the Potentiometer Method, arranged according to Ostwald and as used in the Leipzig laboratories. See *Phy.-chem. Mess.*, 3, *Aufgabe*, Seite 426. Outfit consists of the following:—

Capillary Electrometer with microscope of 30 and 60 diameters and ocular micrometer divided into  $\frac{1}{10}$  mm, with movable mirror and horizontal fine adjustment on the microscope.

Electrometer Key, with platinum contact, on wooden base. See *Phys.-chem. Mess.* 398.

Cadmium Normal Element, mounted on board, with binding posts.

Slide Wire Bridge, with scale 1 meter long divided into millimeters, model of the Phys.-Chemischen Institute, Leipzig.

Accumulator.

Contact Key for one circuit, with three posts, on polished wooden base.

1 pair of Half Elements No. 42625 with Cylinder No. 42532, Stand and Clamp No. 42636 and with two each of No. 42640

Electrodes.

Mercury Commutator with six binding posts.

In the preceding section on Physical Chemistry and in the following section on Physiological Apparatus no effort has been made to list all of the apparatus offered by the leading European manufacturers. In the section on Physical Chemistry we have selected typical apparatus for routine and teaching work in the most important subjects under this heading.

In the section on Physiological and Clinical Apparatus the apparatus has been selected with special reference to laboratories of Experimental Pathology, Experimental and Clinical Medicine, Pharmacology and Experimental Therapeutics. We have made no attempt to list a complete section of apparatus for both teaching and research in Physiology as such.

We keep on hand a supply of European manufacturers' catalogues covering very completely the latest developments in apparatus for both Physical Chemistry and Physiology and these catalogues are sent to customers where wider choice of apparatus seems advisable.

## PHYSIOLOGICAL AND CLINICAL APPARATUS

No. 42800

**42800. Kymograph, Hürthle,** mounted on heavy oak table, with two cylinders of 20 cm diameter and 25 cm high adjustable as to distance apart so that papers of from 60 to 330 cm in length can be used. With new reducing gear so that speeds can be obtained from 0.2 to 120 cm per second. As supplied by us to Rockefeller Institute for Medical Research, Harvard University, University of Wisconsin, University of Pennsylvania, University of California, Drs. Mayo, Graham, Plummer & Judd, U. S. Public Health & Marine Hospital Service, etc.

Duty Free..... 282.00

Duty Paid..... 338.40

**42804. Apparatus for smoking paper** with gas flame, after Hürthle.

Duty Free..... 25.50

Duty Paid..... 30.60

**42808. Special glazed paper,** 50 cm wide, in rolls of 10 meters. Per roll, from stock..... 1.00

**42812. Kymograph, Brodie,** mounted on strong table with top 51x24 inches. The recording drum is 9 inches in diameter and 10 inches high and will take papers of varying length from 6 ft. 3 in. to 9 ft. 6 in. A fine adjustment is provided on the small drum for tightening the paper. The time marker and signal are conveniently placed under the drum so as not to interfere with the manometer. Price includes separate pair of drums for smoking and varnishing, mounted on wall brackets. A recent improvement is a two speed gear so that the speed may, at any moment, be increased from  $1\frac{1}{2}$  to 24 times.

Duty Free..... 330.00

Duty Paid..... 400.00

**42816. Special glazed paper,** 10 inches wide, in rolls of 200 yards, Per roll..... 4.00

No. 42812

No. 42820-21

No. 42832

No. 42844

No. 42818

No. 42860

**KYMOGRAPH, ZUNTZ**, for practical class work in the laboratory. The drum is 18 cm high and is immediately detachable for the purpose of attaching the paper which may be readily smoked on the drum with the apparatus in the horizontal position. With variable speeds as noted in the descriptions below.

42820.	Kymograph, as above, with clock-work, for use either vertically or horizontally, surface speed of cylinder varying from 5 to 40 mm per second. By the use of the fan governor No. 42840 the speed may be reduced to one revolution per hour equal to a surface speed of 500 mm per hour.	Duty Free	30.00	Duty Paid	36.00
42824.	Kymograph, as above, but with Fühner's slow motion modification consisting of a supplementary lever by the use of which the speed may be reduced to one rotation in 24 hours. In addition to this slow motion the instrument will give all the speeds attainable with No. 42820.	Duty Free	43.50	Duty Paid	52.25
42828.	Kymograph, same as No. 42820 but with a special quick motion providing a surface speed of 200 mm per second, in addition to the regular speeds of No. 42820.	Duty Free	40.50	Duty Paid	48.60
42832.	Kymograph, same as 42820, but without clock-work, with pulley wheel for driving by independent motor.		21.00		25.20
42836.	Support, Adjustable, for kymographs listed above (see St of No. 42844). This support provides a convenient means of attaching the writing levers, etc.		4.50		5.40
42840.	Fan Governors, for above kymographs in three sizes, each		.90		1.10
42844.	Attachment for Supporting a Continuous Ink Record. Price does not include adjustable support No. 42836 which must be added.		7.50		9.00
42848.	Support, Extension, for use with endless papers by the Heering method.		18.00		21.60
42852.	Carrying Case, with handle and lock.		7.50		9.00
42856.	Glazed Paper, 510 x 180 mm, gummed. Per 100 sheets.		1.15		1.35
42860.	Recording Drum, Sherrington-Starling, with drum 6 x 6 inches adjustable up and down the shaft. Two electric contact springs are provided by which contact at any two points in the revolution can be made. There are two driving gears within the base, a worm and wheel for the slow motion and a volute gear for the fast, with friction-clutch for stopping and starting. A change speed gear permits a range of speeds from 1 to 870 revolutions in a given time depending on the speed of the driving motor. Without driving motor.	Duty Free	35.25	Duty Paid	42.30
42864.	Recording Drum, as above, with screw lifting device.	Duty Free	38.25	Duty Paid	45.90
42868.	Extra Cylinder, 12 inches in diameter.		18.00		21.60
42872.	Glazed Paper, per roll of 200 yards.		2.25		2.70

43052. **Spirometer, Jaquet**, for the investigation of the products of respiration. The analysis of the air from the Spirometer is best conducted by the exact method of Petersen and Palmquist (See No. 29338). See Prof. Jaquet—"Über die Nachwirkung einer anstrengenden Muskelarbeit auf den Stoffwechsel." *Archiv für experimentelle Pathologie und Pharmakologie*. Bd. 62, pag. 341; and Gigon—"Über einige Fragen des Stoffwechsels und der Ernährung." *Münchener Mediz. Wochenschrift* Nr. 25. 1911.
- Duty Free..... 200.00      Duty Paid..... 260.00
43056. **Respiration Apparatus, Jaquet**, for the convenient securing and the accurate measurement of the products of respiration, consisting of a large ventilating chamber constructed to order of any size for animals, children or adults. This illustration shows an instrument furnished the Pediatric Clinic at Strassburg with the respiration chamber of sufficient size for small children. The chamber is connected as shown by dotted lines to the large gas meter "G" which is driven by an electric motor. With a controlling rheostat the speed of the motor is changed to vary the ventilation of the chamber. The determination of the oxygen and carbon dioxide content of the tested air with the total volume passing through the meter makes it possible to estimate the total oxygen requirement as well as the carbon dioxide output of the individual under experiment. Price, depending upon the size of the respiration chamber, on application.

No. 43076

- MACKENZIE INK POLYGRAPH, English make. This instrument records two simultaneous tracings only, i. e. radial pulse and one other, such as carotid, jugular, apex beat, etc., the great advantage being the avoidance of smoked paper and the convenience and permanency of the ink tracings which may be continued almost to any length from the long roll of paper supplied with the instrument. The instrument is not attached to the patient's wrist and by many is preferred because of this feature. The clock work operates at variable speeds permitting the taking of protracted records at different speeds.
43076. Mackenzie Ink Polygraph including a wrist cuff with tambour for the radial pulse, metallic receiving capsules, two sets of pens, one dozen rolls of paper, bottle of ink, brush for loading pens and necessary rubber tubes for connection.

**JAQUET SPHYGMOCARDIOGRAPH.** In these instruments one tracing must always be that from the radial artery, over which the instrument is fixed in place, either by means of a cuff as in the older forms, or by means of the arm rest No. 43136 as shown in above illustrations. In the single tambour type, therefore, two simultaneous tracings are made in addition to the chronograph record, i. e. the radial pulse from the pelotte attached to the instrument and one other tracing through the single tambour and which may be taken from the jugular, carotid, apex beat, respiratory movements, etc. In the double tambour type two tracings may be made simultaneously in addition to that from the radial pulse and the chronograph record. The double tambour type is the most widely used form of Jaquet instrument. Both types are provided with two speeds so that tracings may be greatly magnified by the use of a high speed.

43092.	Jaquet Sphygmocardiograph, Single Tambour type, with cuff for attaching to wrist and 100 glazed paper recording strips, but without arm rest, cardiograph attachment or receiving tambour.	Duty Free..... 55.00	Duty Paid..... 71.50
43096.	Jaquet Sphygmocardiograph, Single Tambour type, with arm rest No. 43136, cardiograph attachment for apex beat No. 43108, receiving tambour, 30 mm in diameter, for jugular, carotid, etc., cylinder for smoking papers No. 43132, 100 paper recording strips and bath for fixing records in varnish No. 43128.	Duty Free..... 84.65	Duty Paid..... 110.00
43100.	Jaquet Sphygmocardiograph, Double Tambour type (the most widely used form) with cuff to attach to wrist and 100 paper recording strips, but without arm rest, cardiograph attachment or receiving tambour.	Duty Free..... 76.00	Duty Paid..... 100.00
43104.	Jaquet Sphygmocardiograph, Double Tambour type, with arm rest No. 43136, cardiograph attachment for apex beat No. 43108, receiving tambour, 30 mm in diameter, for jugular, carotid, etc., No. 43120, cylinder for smoking paper No. 43132, bath for fixing records in varnish No. 43128 and 100 paper recording strips.	Duty Free..... 105.75	Duty Paid..... 137.50

**Accessories.**

		Duty Free	Stock
43108.	Cardiograph Attachment only for taking apex beat, with girdle, etc.....	13.75	18.00
43112.	Pneumograph after Marey for taking respiratory movements.....	17.50	22.75
43116.	Glycerine Pelotte for taking tracings from any superficially located arteries and as particularly recommended for use on children.....	6.25	8.15
43120.	Receiving Tambour for jugular, etc., 30 mm in diameter.....	1.15	1.50
43124.	“ “ of special shape for the liver.....	1.65	2.25
43128.	Bath for varnishing the tracings.....	1.25	1.75
43132.	Cylinder for smoking papers.....	3.00	4.00
43136.	Arm Rest new model as shown in illustrations.....	10.50	13.75
43140.	Glazed Paper Recording Strips for single tambour instrument per 100 strips....	.40	.50
43144.	Glazed Paper Recording Strips for double tambour instrument per 100 strips....	1.00	1.30

No. 43156

No. 43148

**PORTABLE POLYGRAPH**, with continuous roll (20 meters) of smoked paper. This instrument consists of an accurate clock movement imparting two speeds to the paper, a time marker recording in  $\frac{1}{10}$ th seconds and three recording tambours, each of which may receive impulses from three different parts of the body for simultaneous tracing. The instrument thus answers the purpose of a kymograph and is valuable for many purposes because of its extreme portability. The same instrument is furnished with a mercurial sphygmomanometer (No. 43156) indicating blood pressure and a cuff writing attachment. In this arrangement of the instrument one of the tambours must of necessity be used for recording the tracings of the brachial pulse under various pressures, while the other two tambours may be used to record any other two tracings such as the radial, jugular or carotid pulse, apex beat, respiratory movements, etc., under an accurately determinable blood pressure as is read in a manometer. The pressure applied to the cuff is transmitted to the manometer, and at the same time, to the writing tambour by means of a rubber bulb enclosed within a glass bulb, or Erlanger capsule.

43148. **Portable Polygraph**, with three tambours, continuous roll attachment and one roll of prepared smoked paper strips 20 meters long, in polished wood case, but without other attachments.

Duty Free..... 65.75

Duty Paid..... 85.00

43152. **Portable Polygraph**, as above, with Sphygmograph No. 43164 for taking radial pulse, Cardiograph No. 43168 for taking apex beat, receiving tambour for carotid with zero pressure valve, set of four glass receiving tambours for jugular and other venous pulses, and two rolls of prepared smoked paper strips, 20 meters long.

Duty Free..... 80.00

Duty Paid..... 102.00

43156. **Portable Polygraph**, similar to No. 43148 but with the addition of a sphygmomanometer and cuff for recording brachial pulse under varying pressures, with two recording tambours for use with the two remaining writing tambours (one being in connection with the brachial pulse) and two rolls of smoked paper, 20 meters long.

Duty Free..... 100.00

Duty Paid..... 128.00

43160. **Prepared Smoked Paper**, in rolls 20 meters long..... Duty Free .75 Duty Paid 1.00

43164. **Sphygmograph, Lehmann**, for taking the radial pulse..... 4.00 5.00

43168. **Cardiograph, Lehmann**, for apex beat..... 4.65 6.00

43172. **Pneumograph, Lehmann**..... 4.00 5.00

43174. **Portable Polygraph, Jaquet**, new model, with interchangeable writing points for both ink and smoked paper. Adjustable for speeds from 1 cm to 5 cm per second and for continuous tracing with time marker for  $\frac{1}{10}$ th seconds. With three receiving tambours. In box without attachments.

Duty Free..... 84.50 Duty Paid..... 109.85

43176. **Portable Polygraph, Jaquet**, complete outfit consisting of Polygraph as above with sphygmograph for radial pulse, cardiograph for apex beat, receiving tambour for carotid and two rolls of prepared paper.

Duty Free..... 96.25 Duty Paid..... 125.15

No. 43176

No. 43180

**USKOFF SPHYGMOTONOGRAPH.** The unique feature of this instrument is the simultaneous recording of blood pressure in millimeters of mercury, together with the brachial pulse at varying pressures, and one other tracing (jugular, carotid, apex beat, etc.) In other words, there are four tracings upon the paper, three of which are fixed by the limits of the apparatus, i. e. blood pressure in millimeters of mercury, arterial pulsations at various pressures and time tracing, while the fourth tracing may be taken at will from such sources as carotid, jugular, apex beat, etc. The instrument has been recently remodeled and improved, particularly by the addition of a continuous paper roll attachment, carrying 20 meters of prepared smoked paper, which is now recommended for use with the instrument. The instrument is now also provided with two speeds at the suggestion of Dr. Geo. W. Norris, of Philadelphia. See *Kraus und Hirsch, Krankheiten des Zirkulationsweges, in Fortschritte der gesamten Medizin*, 43, Jahrgang II f. 121 and *Dr. Lindemann Münchener Medizin. Wochenschrift* Nr. 45, 1908 f. 2538.

43180. **Uskoff Sphygmotonomograph**, new model with two speeds and continuous paper roll attachment, including von Recklinghausen's arm cuff and polished mahogany case and one box containing 20 meters of smoked paper recording strips ready for use.  
 Duty Free ..... 110.75      Duty Paid ..... 145.00
43182. **Uskoff Sphygmotonomograph** as above, but with the addition of a receiving tambour with zero pressure valve, four glass receiving tambours for jugular and other venous pulses, cardiograph attachment for taking apex beat and two boxes smoked recording paper strips, 20 meters each.  
 Duty Free ..... 120.00      Duty Paid ..... 155.00
43184. Continuous roll of smoked recording papers, 20 meters long ..... 1.00  
 43188. Glazed Paper Recording Strips, 510 mm long, for use with instruments not provided with continuous roll attachment and which must be smoked before using ..... .75

No. 43192

43192. **Curve Analyzer, Jaquet**, for the accurate measuring and analysis of tracings as taken in Physiological or other work. See *Jaquet, Studien über graphische Zeitregistrierung. Zeitschrift für Biologie*, Bd. XXVIII.  
 Duty Free ..... 68.75  
 Duty Paid ..... 90.00

Einthoven String Galvanometer with Illuminating System, Electrical Resistances, etc.

**EDELMANN LARGE ELECTRO-CARDIOGRAPHIC OUTFIT.** It is impossible in the brief space at our disposal in this catalogue to properly describe the component parts of a complete installation on the basis of the large Edelmann outfit. Complete German literature will be sent upon request to those interested and we give below a summary of the equipment. In the illustrations above **L** represents the Arc Lamp, **W** the cooling cell, **G** the Einthoven String Galvanometer with optical system, **R**, the Photographic Registering Apparatus and **A** and **B** the Wheatstone Bridge, electrical resistances, etc. The equipment is divided into five principal parts, as follows:

#### I. Thread Galvanometer with accessories.

	Duty Free	Duty Paid
43196. Large String Galvanometer, Einthoven	\$245.00	300.00
43200. Zeiss Apochromatic Objective, 4mm.	35.00	43.40
43204. " Achromatic Objective, DD.	12.50	15.50
43208. " Projection Ocular, No. 4.	10.00	12.40

#### II. Illuminating Apparatus.

43212. Hand Regulating Arc Lamp	21.00	25.50
43216. Lamp Box, with condensing system	18.00	21.45
43220. Rheostat, for 220 volts.	20.25	24.75
43224. " " 110 "	19.00	23.25
43228. Water Cooling Cell	2.75	3.30

#### III. Electrodes.

43232. Electrode Chair, consisting of a hospital chair with arm and leg baths of zinc, stands for arm baths, etc.	85.00	100.00
---	-------	--------

#### IV. Electrical Equipment.

43236. Outfit B, consisting of a Weston Normal Element, resistance of about 100,000 ohms, induction coil with telephone, various keys and commutators, slide wire, rheostat, etc.	155.00	188.25
---	--------	--------

#### V. Photographic Registering Apparatus.

43240. Outfit C. Photographic Register for variable lengths of exposure and interchangeable box for records from 6 to 12 cm wide complete.	285.00	351.50
43244. Jaquet Graphic Chronometer.	32.50	46.00
43248. Negative Paper, 75 meters long, 21 cm wide, per roll.	15.00	18.00
43252. " " " " 6 cm " " "	7.25	9.00

No. 43256

**43256. Photographic Register, Dodge, for falling plates, taking regular stock plates 13 x 18 cm.** Recommended for use with String Galvanometers and similar records or as a recording apparatus for smoked paper. Furnished with an adjustable slit and cylindrical lens with a vertical screen of fine platinum wire 2 mm apart, which projects abscissae of a directly photographed coordinate system. The slit and cylindrical lens may be removed when the apparatus is to be used as a smoked paper recorder. The speed of the plate may be varied instantly from 18 cm per hour to 18 cm per second and records with the latter speed may be correctly read to  $\frac{1}{1000}$  second.

Duty Free ..... 112.50 Duty Paid. .... 150.00

Cambridge Electro Cardiographic Apparatus in Position for Operation

**ELECTRO CARDIOGRAPHIC OUTFIT, Cambridge Scientific Instrument Company Outfit No. 2**, recommended as a most complete installation for research laboratories and hospitals. Prices given are in English currency and are f. o. b. Cambridge, England. Duty free and duty paid prices, f. o. b. Philadelphia, are quoted on request. Component parts are supplied at separate prices given. Numbers in text refer to original C. S. I. Co. Catalogue which is sent upon request.

		£	s.	d.
43260.	<b>Einthoven String Galvanometer</b> , consisting of No. 53112 field wound for 10 and 20 volts; No. 53151 Fibre Case with silvered glass fibre; optical system consisting of Zeiss No. 12 compensating eye-piece No. 34633 and two small diameter Zeiss objectives, i. e., 16 mm apochromat No. 34613 and AA achromat No. 34623.....	66	0	0

- Each. .... .75 1.10

**PIPETTES, PRECISION**, graduated by weighing at 20° C. in accordance with the specifications of the **Physikalisch-Technische Reichsanstalt** with individual control number, etc. These pipettes are offered with our unofficial factory certificate and, in addition, with the **Physikalisch-Technische Reichsanstalt** certificate and control stamp, i.e., the official certificate of the German government.

#### Precision Pipettes with Unofficial Factory Certificate.

These certificates are made out in the factory in exact accordance with the methods used by the **Physikalisch-Technische Reichsanstalt** and no pipette is certified unless the error falls within the limit permitted by the P. T. R. The data on these certificates may be used as a check where pipettes are calibrated in the laboratory or with entire reliance upon the accuracy of the figures given.

43552. **Pipettes, Mohr, Precision**, with unofficial factory certificate.

**PIPETTES, PRECISION**, as used in the Hygienic Laboratory of the U. S. Public Health Service for determining the immunity unit in the standardization of diphtheria antitoxin. See *Hygienic Laboratory Bulletin No. 21*. These pipettes are standardized at 20° C. in accordance with the requirements of the Bureau of Standards but are regularly furnished without certificate. They are furnished with certificates of either the Bureau of Standards or the Physikalisch-Technische Reichsanstalt on special order only. Outside diameter of the bulbs is in no case greater than 10 mm in order to permit use with special graduated cylinders used in the same technique. See illustration on preceding page.

43372.	Pipette Volumetric, Precision, graduated to deliver 1 cc. For purpose of easy manipulation this pipette is supplied with two etched bands near top.									
43376.	Pipettes, Volumetric, Precision, as above, graduated to contain.									
	Capacity, cc.	1	2	3	4	5	6	7	8	9
	Each.	.75	.75	.75	.75	.75	.85	.90	.95	1.00
43580.	Pipettes, Graduated, Precision, so-called "Ehrlich" pipettes, graduated in $\frac{1}{10}$ cc.									
	Graduated from.						.01 to 1 cc	.07 to 2 cc	1.5 to 3 cc	
	Each.						2.50	2.50	2.50	

43384.	Pipette Box, for sterilizing pipettes, cylindrical form, of polished copper, with tightly fitting lid, 2½ inches in diameter by 16 inches high. Will take about 75 graduated pipettes, 1 cc in $\frac{1}{10}$ ths or about 15 of the same 10 cc in $\frac{1}{10}$ ths.		
43588.	Pipette Box, same as above but of sheet iron.		
43592.	" " rectangular form, for sterilizing pipettes in bacteriological work, of copper.		
	Size, inches.	1½ x 2½ x 10	1½ x 2½ x 16
	Each.	1.75	2.50
43596.	Pipette Box, same as above but of sheet iron.		
	Size, inches.	1½ x 2½ x 10	1½ x 2½ x 16
	Each.	1.25	1.50
43600.	Pipette Box, for sterilizing and transporting pipettes, with lid and removable end; of brass, nickel plated, with asbestos lining; 2 inches deep by 4 inches wide by 16 inches long.		
43604.	Pipette Support, of brass, nickel plated.		
43608.	Pipette Rest, with ground glass surface for writing.		
43612.	" " of porcelain, for pipettes, stirrers, etc., 75 x 65 mm.		
43616.	Pipette Support, of polished hardwood, revolving.		
43620.	Pipette Support, for 24 pipettes, perforated discs are of polished wood, upright support of brass and base of glazed porcelain.		
			5.50

**PLANT PHYSIOLOGY APPARATUS, GANONG.** The apparatus here listed has been developed during a period of ten years by Prof. W. F. Ganong, of Smith College, and manufactured by the Bausch & Lomb Optical Company. A special catalogue entitled, "*Ganong Botanical Apparatus for use in Plant Physiology*," 53 pp. with introduction and descriptions of the apparatus with method of use, by Prof. Ganong, is sent on application. The use of the apparatus finds fuller descriptions in Ganong, "*A Laboratory Course in Plant Physiology*," Henry Holt & Co., New York and Ganong, "*The Teaching Botanist*," the Macmillan Co., New York.

43700.	Aluminum Shells, for transpiration experiments, consisting of shell with band and screw as shown in illustration, but without rubber roof. Diameter, inches.....	3	4	5
	Each.....	1.25	1.75	2.75
43704.	Rubber Tissue, medium thickness, for use as roofs. Per ounce.....			.30
43708.	Anoxyscope, Demonstration, for showing the necessity for oxygen in plant growth. Complete with 5 oz. of caustic potash and 1 oz. of pyrogallie acid.....			4.25
43712.	Auxograph, Demonstration, for recording the rate and amount of growth. Complete with chain attachment for plant.....			25.00
43716.	Extra Recording Cylinder.....			1.50
43720.	Bell Jar Support, with split glass plate but without bell jar and Potometer as shown in illustration.....			10.00
43724.	Bell Jar, only, for above, complete with two hole rubber stopper and glass tubes.....			3.25
43728.	Caloriscopes and Calorimeter, for demonstrating the release of heat in respiration. Complete with two silvered Dewar bulbs, 500 cc, with thermometers and wooden support.....			18.00
43732.	Clamp Stand, portable, for use with Demonstration Clinostat, complete with two rods.....			8.00
43736.	Clinostat, Demonstration, for use either obliquely or horizontally in connection with the Clamp Stand above listed. Will take a 4 inch pot but operates with greater accuracy with a pot 3 inches in diameter. Complete with clockwork with disc, screw rods, spindle arm and extensible support, but without Clamp Stand.....			22.50
43740.	Gas Analysis Tubes, for demonstration of the percentage of carbon dioxide contained in a sample of gas. With two reagent tubes, suitable rubber connections and graduated stopcock gas tube.....			2.00
43744.	Leaf Area Cutter, for demonstrating the increase of organic substances through photosynthesis. With two cups, test tube and holder for same.....			12.00
43748.	Leaf Clasp, for applying special treatment to two exactly corresponding areas on the leaf surface as, for instance, Stahl's cobalt chloride method in the study of transpiration. Without support.....			6.50
43752.	Support, for above.....			.35

43756. **Light Screen**, whole leaf form, with screen box with adjustable clamp, 7 x 7 clear glass plate with ground edges, two half plates with ground edges and 1 sq. ft. of tin foil, but without color screen bottles and support..... 9.00
43760. **Support**, for above..... .35
43764. **Light Screen**, part leaf form, as shown in illustration, with  $\frac{1}{2}$  sq. ft. of thin tin foil..... 1.25
43768. **Manometer, Demonstration Root-pressure**, showing the force with which roots start the sap up the stems. With clamp and vertical support, 2 inches of rubber tubing, two feet of tire tape, 1 oz of stopcock wax and 10 cc of mercury..... 4.75
43772. **Manometer, Normal**, for measuring liquid pressure, particularly osmotic pressure, etc. With two glass sleeves, rubber tubing and tire tape for connections, 2 cc of mercury and 1 oz. of shellac for sealing..... 1.50
43776. **Osmoscope, Demonstration**, to show osmotic absorption before the class. With support and clamps, storage bottle and two extra lengths of parchment paper tubing..... 4.25
43780. **Photosynthometer**, for accurate measurement of the absorption of carbon dioxide by green plants in light with the equivolumetric release of oxygen. Complete with reagent tubes, rubber connections, clamps and cylinder and tire tape for connections, 2 cc of mercury and 1 oz. of shellac for sealing..... 5.25
43784. **Potometer**, for the quantitative determination of transpiration by the measurement of water absorption by a cut shoot. With split rubber stopper, 1 oz. of stopcock wax, vial and slide piece..... 3.75
43788. **Respirometer**, for demonstrating and measuring the gas exchanges in typical respiring material as, for instance, in germinating seeds. With rubber connection, two clamps and support..... 8.25
43792. **Respiroscope, Demonstration**, for showing the elimination of carbon dioxide to large classes. With 1 oz. of calcic oxide and 1 liter bottle for limewater..... 4.50
43796. **Space Marker, Root and Stem**..... 1.00
43800. **" " Leaf**..... 2.00

43964.	Plate, Streak, Royal Berlin Porcelain, unglazed, as used for arsenic test and by mineralogists; 100 x 65 mm.....								.45

## PLATINUM WARE

The Platinum Ware listed below is genuine hammered ware from selected factories in both Europe and America. Our relations with the leading manufacturers enable us to offer it at the current daily quotations observed in the platinum trade. Most of the items listed can be furnished immediately from our own stock and when this is impossible delivery usually requires only three or four days. Approximate weights are given without price. The current prices per gram for the different classifications of ware used in the platinum trade are inserted from time to time on colored slips as our catalogues are sent out.

## The Care of Platinum Ware.

W. C. Heraeus, in the *Zeitschrift für angewandte Chemie*, 1932, *Heft 37*—and 1937, *Heft 41*, explains the causes of the destruction of platinum crucibles in the making of phosphate analyses and refers to the fact that the destruction of platinum ware (which is always only a chemical change of its properties) might in many cases be prevented if the crucibles or dishes were not exposed to unnecessarily high temperatures during the process of annealing.

The uniting of platinum with carbon, silica, boron, phosphorus, etc., takes place only when the different salts are reduced at comparatively high temperatures.

The susceptibility of platinum toward hydrogen and hydrocarbon while annealing accelerates the reductions considerably. When the combustion is made in a gas furnace, Bunsen burner, etc., care should be taken for obvious reasons, that there is no reducing atmosphere in the furnace. The use of acetylene gas for the annealing of platinum ware is also harmful to the platinum.

The combustion of organic substances should be done at low temperatures and the annealing over a blowpipe or in a furnace only when all the carbon has been volatilized. At high temperatures platinum is very readily attacked when the melting of alkaline or alkali carbonate is done in the presence of sulphur or cyanide of potassium.

Metals of a low melting point and easily reducing oxides of metals should, of course, not be annealed in platinum; the same may be said of all reagents which give up chlorine, boron, iodine, sulphur or phosphorus.

Frequent cleaning of platinum ware with sea-sand removes alloys formed on the surface.

**44000. Platinum Foil.** This is carried in stock 8 inches wide and can be furnished in any length up to 24 inches.

	Light	Medium	Heavy

# POLARISCOPES

For Urine Analysis

For General Purposes

For Sugar Analysis

No. 44312

## Polariscopes for Urine Analysis.

- |        |   |       |
|--------|---|-------|
| 44300. | Polariscope, Ultzmann, for urine analysis by means of either day or lamp light. With a tube of special length so that the angular rotation in degrees is equivalent to 1% glucose content. By means of verniers readings are made to $\frac{1}{10}$ %. Complete with support as shown in illustration.  |       |
|        | Duty Free .....   | 28.50 |
|        | Stock .....   | 38.00 |
| 44304. | Extra Glass Tube for urine work.  |       |
|        | Duty Free .....   | 2.10  |
|        | Stock .....   | 3.50  |
| 44308. | Extra Glass Tube of 200 mm length by the use of which this instrument may be used for purposes other than urine analysis for substances where the specific rotary power is within the limits of the rotary scale.   |       |
|        | Duty Free .....   | 2.10  |
|        | Stock .....   | 3.50  |
| 44312. | Polariscope, Schmidt & Haensch, Mitscherlich, with Laurent Polarizer. With circular scale reading to 1° of arc and by means of verniers to $\frac{1}{10}$ °, equal respectively to 1% and $\frac{1}{10}$ % of glucose in urine when the special tube of 189.4 mm is used. For use only with monochromatic light from a sodium flame. With one patent tube of 189.4 mm and one tube of 94.7 mm and gas sodium lamp with platinum ring, but without case. |       |
|        | Duty Free .....   | 56.55 |
|        | Stock .....   | 75.40 |
| 44316. | Case, for above, of polished wood, with lock and key, taking polariscope tubes and vertical pillar but not providing for the lamp or tripod base.   |       |
|        | Duty Free .....   | 10.50 |
|        | Stock .....   | 14.00 |

## Explanation of the Use of Mitscherlich Polariscopes in Urine Analysis.

For urine analysis tubes of special length, i.e., 189.4 and 94.7 mm, enable the user to determine the percentage by volume of glucose in the urine without special calculation. When the longer tube, i.e., 189.4 mm, is used the rotation obtained in degrees of arc is directly equal to the amount in grams of glucose contained in 100 cc of the solution. When the tube of 94.7 mm is used for darkly colored specimens, the result must, therefore, be multiplied by two. As the specific rotary power of albumen is the same as that of glucose except that the latter is laevo rotatory while that of glucose is dextro rotatory, this fact enables the investigator to determine the percentage of albumen when same is present. The usual method of procedure is as follows:—

If the urine is not clear, i.e., if it is clouded, it must be filtered quickly through a soft filter paper. If it is so strongly colored that the dividing line cannot be clearly defined through the long tube, the shorter tube must be used. If this does not give a better result the urine must be slightly discolored by being poured into a flask containing pure dry animal carbon or by being mixed with  $\frac{1}{10}$  part of lead acetate and then filtered. In this case the reading of the rotation must be multiplied by 1.1. The temperature should be within 15 and 20° C.

The tube is then filled and placed into the instrument and the reading in  $\frac{1}{10}$  degrees will give the percentage of glucose. If the urine contains albumen, two readings will be necessary. As albumen gives a rotation in the opposite direction to glucose, the total reading in presence of albumen will be equal to the number of degrees for glucose less than that for albumen. Before effecting the second examination the albumen must be removed. 100 cc is boiled in an evaporating dish and a few drops of acetic acid are added until the solution reacts as acid. The solution is then filtered and the filtrate washed and diluted to 100 cc at 15° C. The second polarizing test will now give the percentage of glucose and the difference between this reading and the former gives the percentage of albumen.

# Illustrations.

1. Almost colorless urine without albumen; clear. Observation tube 159.4 mm. Equal intensity in both halves of the field obtained after a turn of 2° to the right. Vernier mark 9 coincides with the circular division, i.e., 2.9°. Percentage of sugar = 2.9%.
2. Urine without albumen, clear, but of an intense color. Observation tube 94.7 mm. Equal intensities at 1.5°. Percentage of sugar =  $2 \times 1.5 = 3.0\%$ .
3. Brown urine, no albumen, 100 cc mixed with 10 cc lead acetate. Tube = 159.4. Equal intensities at 2.9°. Percentage of sugar  $2.9 \times 1.1 = 3.19\%$ .
4. Brown urine, no albumen. Tube = 94.7 mm. 100 cc mixed with 10 cc lead acetate. Equal intensities at 1.3°. Percentage of sugar  $1.3 \times 1.1 = 2.86\%$ .
5. Clear, almost colorless urine with albumen, tube 159.4 mm. a. Determination of the first rotation. Equal intensities after turning to left at 3°. b. Separation of the albumen; equal intensities without turning analyzer, i.e., at 0°.
6. Clear urine with albumen. a. First rotation, equal intensities at 2.7°. b. After removal of albumen; equal intensities at 3.1°. Percentage of sugar = 3.1%; of albumen  $3.1 - 2.7 = 0.4\%$ .
7. Sucrose solution. Observation tube = 159.4 mm; equal intensities at 5.2°. Percentage of sucrose =  $5.2 \times \frac{1}{2} = 3.9\%$ .

No. 44320

No. 44324

44320. Polariscop, Schmidt & Haensch, with Jellet-Cornu Polarizer and Wedge Compensation, with Direct Reading Linear Scale. For use with ordinary white light such as a petroleum lamp, incandescent lamp, etc. When a 200 mm tube is used the glucose content present in the urine is read directly on the scale to  $\frac{1}{10}\%$ . Where a highly colored specimen of urine is to be examined tubes of 100 mm or 50 mm are to be used, in which case the reading is to be multiplied by 2 and 4, respectively. Complete with one each of patent tubes No. 44552 of 200, 100 and 50 mm length, Petroleum Lamp No. 44516, on adjustable stand with asbestos cylinder as shown in illustration but without case.  
Duty Free..... 87.30      Duty Paid..... 116.40
44324. Polariscop, Schmidt & Haensch, with Jellet Cornu Polarizer and Wedge Compensation, with Direct Reading Linear Scale. Exactly same as No. 44320 but with analyzer and scale in new dust proof mounting and with special Osram electric illuminating device, which serves at the same time to illuminate the scale, with incandescent lamp used as resistance so that connection can be made with ordinary lighting circuit. State voltage in ordering. A most convenient and satisfactory outfit for hospital and other uses where many routine sugar determinations in urine samples are to be made; without case.  
Duty Free..... 119.10      Duty Paid..... 158.80

Polariscopes for General Purposes, with Divided Circle. For use with Monochromatic Light.

No. 44332

No. 44336

44328. Polariscopes, Mitscherlich, Schmidt & Haensch, exactly the same as No. 44312 but with bichromate cell and tubes of 100 and 200 mm in length instead of the special urine tubes. Reading to  $\frac{1}{10}^{\circ}$  and useful for a variety of work in the investigations of wine, beer, oil, etc., where a great degree of accuracy is not required. With gas sodium lamp with platinum ring. At extra cost a Ventzke degree scale is furnished on these polariscopes. See No. 44356.

| Duty Free..... | 138.60 | Stock..... | 184.80 |
|----------------|--------|------------|--------|
44336. Polariscopes, with Lippich Polarizer, Lippich, Schmidt & Haensch, with divided circle reading in  $\frac{1}{10}^{\circ}$  and by means of verniers to  $\frac{1}{10}^{\circ}$ , with simplified protection and mirror illuminating device for the scale. On tripod support. With new arrangement for connecting the lamp stand to the base of the polariscopes so that it is always in exactly the right position. With bichromate cell, gas sodium lamp, one each of 100, 200 and 220 tubes, in polished alderwood case. Recommended as the most satisfactory outfit for general laboratory work.

Optional Equipment for Polariscopes, Nos. 44336, 44340, 44344 and 44348.

44352.	Triple Field Polarizing Arrangement for greatly increasing the sensibility as well as the safety and convenience of the adjustment.		
	Duty Free, extra.....	30.00	Duty Paid, extra..... 40.00
44356.	Extra Ventzke Degree Scale in addition to that reading in degrees of arc. The Ventzke scale by means of a third vernier reads to $\frac{1}{10}\%$ of cane sugar.		
	Duty Free, extra.....	12.00	Duty Paid, extra..... 16.00
44360.	Illuminating Device for the verniers consisting of a miniature 6 volt electric lamp in place of the reflecting mirrors.		
	Duty Free, extra.....	9.00	Duty Paid, extra..... 12.00
44364.	Accumulator, three cell, for use with above.		
	Duty Free, extra.....	21.00	Duty Paid, extra..... 28.00
44368.	Glass Case, Folding, for use with instruments with trestle support.		
	For Polariscopes with tubes, mm.....	220	400
	Duty Free.....	15.00	15.90
	Duty Paid.....	20.00	21.20
44372.	Glass Case, with Base Board, for use on instruments with trestle support. See illustration page 431.		
	For Polariscopes with tubes, mm.....	220	400
	Duty Free.....	25.50	27.90
	Duty Paid.....	34.00	37.20

No. 44376

44376.	Polariscope, Schmidt & Haensch, with Lippich Polarizer, for both Macro and Micro Polarisation Experiments. Consisting of Lippich Polariscopes No. 44344, on trestle support with the addition of three diaphragms of different sizes on the polarizer, a direct vision spectroscopic adjustable for all wave lengths and with Nernst lamp for illumination of spectroscopic which also serves to illuminate the mirrors of the scale of the polariscope. Operating on either direct or alternating current. Voltage must be specified in ordering. Because of the great variety of work for which this instrument is intended no equipment of tubes is included. Without Case.			
	For tubes, mm.....	220	400	600
	Duty Free.....	382.50	391.50	403.50
	Duty Paid.....	510.00	522.00	538.00
44380.	Polariscope, Schmidt & Haensch, Landolt with Lippich Polarizer, with new arrangement for taking not only all kinds of polariscope tubes but other heating vessels, cooling vessels, electrical devices, etc. The polariscope proper is as described under No. 44344, with trestle support. With adjustment providing for the accurate centering of the optical system at all times. Without Landolt heating device G shown in cut. With special lamp after Landolt. For tubes up to 200 mm in length but without any tubes or case.			
	Duty Free.....	223.80		
	Duty Paid.....		298.40	

No. 44380

44384. Special V Shaped Trough to rest on supports *cc* for any kind of tubes.  
 Duty Free, extra..... 5.40      Duty Paid, extra..... 7.20
44388. Heating Device, Landolt (G in illustration) consisting of an asbestos jacketed brass vessel with adjustable lid, thermometer reading to 100° C. and a polariscope tube, gold plated inside, 100 mm long set in a glass cylinder.  
 Duty Free, extra..... 19.50      Duty Paid, extra..... 26.00

44392. Electric Heating Device, Abderhalden, for constant temperatures, for use on No. 44380. The use of this device obviates the use of an incubator in the Abderhalden technique. See *Hoppe-Seyler's Zeitschrift für Physiologische Chemie*, Band 84, Heft 4.  
 Duty Free..... 90.00      Duty Paid..... 120.00

44396. Special Tubes, Abderhalden's for use in above, 20 mm long and containing 2 cc.....  
 Duty Free      Duty Paid  
 3.00      4.00

44400. Special Thermometer, Abderhalden's, for use in above - 20° to 80° C. ..  
 2.25      3.00

44404. Special Resistance, for 110 volts.....  
 12.00      16.00

44408. Special Resistance, for 220 volts.....  
 15.00      20.00

**Note.**—The above described Polariscope, No. 44380, with the special Abderhalden Tubes No. 44396 and if desired, the special Heating Device No. 44392, is used and recommended by Prof. Abderhalden in his work on the protective ferments of animal organisms and the early diagnosis of pregnancy by the optical method. We are prepared to furnish detailed estimates on this equipment.

Abderhalden Electric Heating Device No. 44392 in position on Polariscope No. 44380 and with Rheostat

No. 44412

44412. Polariscopes, Schmidt & Haensch, with Lippich Polarizer and Fischer Micro-Polarisation Attachment. On trestle support with direct vision Spectroscope with Nernst lamp illumination. Voltage must be stated in ordering. The spectroscope is permanently adjusted for the D line. With triple field polarizer arranged for the observations of very small fields. Will take ordinary tubes up to 220 mm in length. With one micro tube after Fischer 50 mm long .1 cc content, and one 100 mm long, .2 cc content, but without other tubes or accessories.

Duty Free..... 367.20

Duty Paid..... 489.60

### Polariscopes for Sugar Analysis (Saccharimeters)

As these instruments are all supplied with either single or double wedge compensation they may be used with white light of any source but the electric illuminating device No. 44476 is specially recommended. All of the outfits are supplied with the bichromate cell as shown attached for use in illustration No. 44428. The scales are graduated in Ventzke degrees for sugar analysis but the instruments may be used for other purposes by using the factor  $1^\circ \text{ Ventzke} = 0.34657^\circ \text{ angular rotation for D}$  by which factor Ventzke degrees are converted into degrees of arc. As regularly listed the instruments are supplied with the double Lippich Polarizer with the triple field Polarizer as optional equipment.

44428. **Polariscopes (Saccharimeter) Schmidt & Haensch, with Single Wedge Compensation, with linear scale** divided on Nickelin, reading directly from  $-25$  to  $+100^\circ \text{ Ventzke}$ . With new dust proof mounting for scale and analyzer, double Lippich Polarizer and bichromate cell. For tubes up to 200 mm in length and including one each of patent tubes No. 44552 of 100 and 200 mm length but without lamp. On tripod support as shown in illustration. In polished alderwood case.  
 Duty Free..... 142.20      Stock..... 189.60
44432. **Polariscopes, same as above, but for 400 mm tubes, and including one each of No. 44552 patent tubes** 100, 200 and 400 mm length, in polished alderwood case.  
 Duty Free..... 152.10      Duty Paid..... 202.80

No. 44436

44436. **Polariscopes, exactly same as No. 44428, i.e., with 100 mm and 200 mm tubes, but on trestle support and without case.**  
 Duty Free..... 147.00  
 Stock..... 196.00
44440. **Polariscopes, exactly same as No. 44432, i.e., with 100 mm, 200 mm and 400 mm tubes, but on trestle support and without case.**  
 Duty Free..... 156.00  
 Duty Paid..... 208.00

No. 44452 with 44476 Electric Illuminating Device and Reading Lamp used as Resistance

44444. **Polariscope (Saccharimeter), Schmidt & Haensch, with Double Wedge Compensation, and linear scale reading from -100 to +100° Ventzke.** Otherwise same as No. 44428. With one each 100 mm and 200 mm tubes, on tripod support, in polished alderwood case.  
 Duty Free ..... 197.70      Stock ..... 263.60
44448. **Polariscope, same as No. 44444 but for 400 mm tubes, including one each 100 mm, 200 mm and 400 mm tubes, on tripod support, in polished alderwood case.**  
 Duty Free ..... 210.60      Duty Paid ..... 280.80
44452. **Polariscope, same as No. 44444 but on trestle support. Including one each 100 mm and 200 mm tubes but without case.**  
 Duty Free ..... 202.50      Stock ..... 270.00
44456. **Polariscope, same as No. 44448, i.e., for 400 mm tubes, but on trestle support, including one each of 100, 200 and 400 mm tubes, but without case.**  
 Duty Free ..... 217.50      Duty Paid ..... 290.00

No. 44460

44460. **Polariscope (Saccharimeter) Bates, with Double Wedge Compensation, with variable sensibility and brightness (Fric's U. S. Patent, Feb. 12th, 1907). By simply turning a milled head both analyzer and polarizer Nicols are rotated simultaneously through the correct angles to give any desired sensibility and brightness without change of the zero point or other corrections. The half-shadow angle is shown by the "degree of brightness" scale which is in plain view of the operator. This arrangement permits of readings under theoretically perfect conditions. The scales and verniers are etched upon ground glass and read by transmitted light. The objectionable black line between vernier and scale on the metal scales commonly used is thus avoided as well as the expansion coefficient. The scale can easily be interpolated to 0.01° Sugar. Scales read up to a 100° Sugar. Attached to the top of the analyzer case is a horizontal thermometer reading from 10°-40° C., whereby the temperature of the interior of the instrument can be ascertained. For 200 mm tubes. Complete on stand, with one each of 100 and 200 mm tubes, in case..... 850.00**
44464. **Polariscope, Bates, exactly same as above, but for 400 mm tubes. Complete on stand, with one each of 100, 200 and 400 mm tubes, in case ..... 900.00**

44468. **Polariscope Tube, Bates, of metal, with a 9 mm bar to eliminate danger from bending and to give minimum deep polarization from wall reflection. The weight is carried upon two shoulders which are integral parts of the tube, and not upon the caps.**

We devote over eight thousand sq. ft. of floor space to our salesroom and offices, maintaining a permanent exhibit of Laboratory Apparatus amounting to over six thousand different pieces, conveniently arranged for the inspection and handling by our visitors, and a dark room for the demonstration of Projection and Micro-Photographic Apparatus.

We recommend that customers visit our establishment when possible before the preparation of equipment lists and use this facility we provide for the careful selection of apparatus.

# PROJECTION APPARATUS

No. 44800—Model B with Mazda Lamp

No. 44804—Model B with Body Arc

No. 44820—Enlarging Outfit

**PROJECTION APPARATUS, BAUSCH & LOMB MODEL B BALOPTICON.** This little Balopticon is a high grade stereopticon for use in small classrooms, etc.

We furnish the Model B with either small arc lamp and compact rheostat or with the new 250 Watt nitrogen filled Mazda Lamp with silvered globe and concentrated filament. This new illuminant gives almost as brilliant a picture with lantern slides as does the arc lamp on direct current circuit and quite as brilliant as the arc lamp on alternating circuit. It is strongly recommended for school and home work where apparatus is to be operated by those not familiar with the manipulation of even a simple arc lamp. Both are furnished complete with connections for ready attachment to the lamp socket on any ordinary house wiring. Where electricity is not available, we furnish either an acetylene or Welsbach gas burner. If both types of illuminant are desired, we can supply the extra lamp in its lamp house for quick and easy interchange.

A feature of this lantern is the special ventilation of both lamp house and condenser mount, permitting one to use lantern slide films, if desired, without the expense and inconvenience of a water cell.

**Lamp House**—Of sheet metal with special ventilation; two styles—one for arc lamp measuring  $6\frac{1}{2} \times 2\frac{1}{2} \times 5$  in., and that for Mazda, acetylene or Welsbach lamp measuring  $6\frac{1}{2} \times 7 \times 5$  in.; both styles fit in grooves to rear standard and can be instantly interchanged by lifting out one and sliding in the other.

**Illuminant**—Bausch & Lomb Adjustable Baby Arc Lamp with small 4½-ampere rheostat, 250-watt Mazda lamp, nitrogen filled with silvered globe, acetylene or Welsbach gas burner, as desired; carbons of arc lamp can be adjusted independently and then very easily fed forward by turning a single convenient button.

**Projection Lens**—Special achromatic lens of 10-inch focus in spiral focusing mount regularly supplied; either 8-inch or 12-inch focus lens can be furnished, by special order, without extra charge.

**Dimensions**—Length (ready for operation), 20 in. over all, with arc, or 22 in. with other lamps; height, 9½ in.

**Weight**—Complete in case, 15 lbs. with arc and rheostat, or 13 lbs. with other lamps.

**Case**—Of sheet metal,  $7\frac{1}{2} \times 9\frac{1}{2} \times 15$  in., neatly lacquered in black and provided with carrying strap.

44800.	Model B Balopticon, as above described, with 250-watt Mazda lamp, cord and plug, in case, with directions.....	22.00
44804.	Model B Balopticon, with arc lamp, rheostat and switch.....	24.00
44808.	“ “ “ with Welsbach gas burner and connections.....	20.00
44812.	“ “ “ with acetylene burner.....	20.00
44813.	Acetylene Tank (Prest-o-lite), charged with 10 cu. ft. of Acetylene.....	10.00
44820.	Lantern Slide and Enlarging Outfit, for use in connection with Model B Balopticon, consisting of the following:—	

Two sections of metal track, each 21 in. long, to be screwed to table or baseboard.

Easel board, accommodating 11 x 14-in. paper either vertically or horizontally and mounted at one end of track.

Supplementary track, 18 in. long, sliding on base tracks and supporting the Balopticon at suitable height to align optical axis with center of board.

Special holder with two pieces of glass to accommodate films for enlarging, up to 4 x 5 in.

Frame to hold negatives for lantern slide making, 5 x 7 in. and smaller sizes.

Adapter with ground glass, attaching to rear of easel board to accommodate regular lamp house of Balopticon.

Special frame, fitting in slide carrier support to take ground glass and plate holder

Piece of ground glass to place between condensing lenses when arc lamp is used.

Cap with ruby glass to place on projection lens when placing sensitized paper on easel.

**Complete outfit, as above.....** 18.00

44824.	Flange, for use when it is desired to use photographic lens from the camera, same to be attached to the front board of the Balopticon. Make and size of the photographic lens must be specified in ordering.....	2.00
--------	--	------

**Note**—For small enlargements the regular 10-inch e. f. projection objective supplied with the Model B is satisfactory. For larger work a shorter focus lens is recommended such as the 6-inch regular projection objective.

No. 44876—Portable Model C in Case with Screen

No. 44876—Portable Model C with Tripod, Case and Acetylene Tank

No. 44868—Model C Dissolving

**PROJECTION APPARATUS, BAUSCH & LOMB DOUBLE MODEL C FOR DISSOLVING EFFECT**, with Bausch & Lomb patent iris diaphragm dissolver, which affords a perfect blending of one picture into the other. With the exception of the iris dissolver the outfits are standard Model C but when ordered together are furnished with the necessary connecting pieces to rigidly join them together.

- |        |   |       |
|--------|---|-------|
| 44868. | <b>Double Model C Balopticon</b> , with 6, 8 or 10-inch focus, $1\frac{1}{8}$ inch diameter projection lens, as specified, with iris dissolver.....   | 75.00 |
| 44872. | <b>Double Model C Balopticon</b> , with 10, 12 or 15-inch focus, $2\frac{1}{8}$ inch diameter projection lens, as specified, with iris dissolver..... | 85.00 |

**PROJECTION APPARATUS, BAUSCH & LOMB PORTABLE MODEL C**, as widely used by members of the staff of Agricultural Experiment Stations in their field work, Farmers Institute work, etc., and as supplied by us to all of the field lecturers employed by the Rockefeller Sanitary Commission for the Eradication of the Hookworm.

**Lantern**—Bausch & Lomb regular Model C Balopticon, fitted with  $2\frac{1}{4}$ -inch diameter, 10-inch focus Standard projection lens and double condensing system in patent ventilated mount.

**Illuminant**—Acetylene lamp of two-jet type with capacity of  $1\frac{1}{2}$  cubic feet of gas per hour; fitted with special mirror reflector.

**Supporting Table**—Consists of strong tripod, adjustable to any desired height, with connection for screwing firmly into cover of carrying case, which forms the top.

**Carrying Case**—Of wood, measuring  $29\frac{1}{2} \times 13\frac{1}{2} \times 8\frac{1}{2}$  in., covered with leather; cover is detachable, asbestos lined and fitted with neat metal plate into which tripod is screwed; case is carried by strong handle attached to heavy leather strap and, in addition to the regular outfit, contains space for gas tank of 10 cubic feet capacity and a second illuminant, both of which may be added at extra cost.

**Weight**—Outfit in case, with gas tank added, 40 lbs.

**Suggested Accessories**—Wherever electric wiring is available, an electric illuminant, particularly the arc lamp, is preferable, and it is well to be provided with one in addition to the acetylene lamp. They will be found listed elsewhere. For those desiring a portable screen we list below a 6 x 6-foot screen of heavy material on a plain roller. It is furnished in a canvas covered case with reinforced leather ends, which is fitted with a serviceable handle for carrying with the outfit, the whole weighing but 4 lbs.

- |        |  |       |

| 44884. | <b>Acetylene Gas Tank</b> , 10 cu. ft. capacity.....   | 10.00 |

No. 44885. Combined Balopticon in position for projection of lantern slides

No. 44885. Combined Balopticon in position for projection of opaque objects without reversion of image

**PROJECTION APPARATUS, BAUSCH & LOMB COMBINED BALOPTICON, NEW MODEL**, providing for lantern slide projection and projection of opaque objects with immediate interchange from one to the other. The new model differs from the earlier model of the Combined Balopticon in that it is now provided with a horizontal object holder for opaque objects which has been found in the Universal and Convertible models to be distinctly better than the vertical object holder and, further, that opaque projection is accomplished with the object on the screen in the correct position from left to right, i.e. without reversion of the image. This is accomplished by illuminating the opaque object directly from the arc by placing the lamp house in the inclined position so that the image projected vertically through the opaque projection objective is reflected horizontally to the screen by the mirror over the opaque object. Lantern slides are projected with the lamp house in the horizontal position and the change from the projection of lantern slides to opaque projection, or vice versa, is accomplished by the simple shifting of the lamp house from the horizontal to the vertical position as shown in the illustration. The size of the area which may be projected through the opaque projection objective is 5 x 5 inches and the object holder is so constructed that large illustrations can be shifted about to cover any desired area for projection. For convenience in handling photographic plate and post cards two carriers are supplied with adjustable frames to take cards of varying width.

**Base**—Consisting of heavy sheet metal supports, front and rear, 8 inches wide, and carrying dark chamber at height of 9½ inches.

**Lamp House**—Measures 13½ inches long, 14½ inches high and 7½ inches wide; light tight and freely ventilated, constructed of double sheet metal walls with an air space between the two walls and the roof, fitted with special patented ventilator; with large light tight spring door on the side and observation windows on both sides; mounted between horizontal supports at front end and provided with handle at rear, permitting it to be easily tilted for projection of opaque objects and held rigidly in position by spring arm; conforms to the most rigorous requirements of Boards of Underwriters.

**Illuminant**—Hand-feed arc lamp for direct or alternating current.

**Condensing System**—Bausch & Lomb regular triple system, with two rear lenses mounted directly in front of the lamp house in ventilated mount, giving a parallel beam of light in the dark chamber, and the front lens placed in front of the dark chamber immediately behind the slide carrier; diameter 4½ inches.

**Dark Chamber**—Of sheet metal, light tight, measuring 12½ x 11½ x 7 inches; with opening in bottom for projected objects 5 inches square; provided with hinged door and observation window on right side.

**Object Holder**—Of square sheet metal mounted on arm controlled by two strong springs; accommodating objects of varying thickness, the holder always remaining parallel to base and automatically bringing object into proper plane of projection.

**Slide Carrier**—Double carrier with elevating device.

**Post Card Carrier**—Two adjustable carriers with wooden backs and frame which fit opaque object holder.

**Projection Lenses**—Two of Bausch & Lomb new standard lenses with rack and pinion focusing adjustment, of such relative foci as to project images of approximately equal size from opaque objects and lantern slides; lens for opaque objects fitted with adjustable first surface mirror.

**Dimensions**—Length from rear of lamp house to front of projection lens for lantern slides; height to top of mirror 33 inches.

44885. New Combined Balopticon, as above, with 4 inch diameter, 15 inch focus lens for opaque projection and 1½ inch diameter, 10 inch focus lens for lantern slide projection; without rheostat... 120.00
44886. New Combined Balopticon, as above, but with 18 inch focus lens for opaque projection and 12 inch focus lens for lantern slide projection... 120.00

No. 44888—Universal Balopticon

No. 44892—Universal Balopticon  
With Vertical Attachment

No. 44888 in Position for Opaque Projection

No. 44892 With Projection Microscope

**PROJECTION APPARATUS, BAUSCH & LOMB UNIVERSAL BALOPTICON, New Model,** providing for lantern slide projection, opaque object projection by reflected light from an area 6x6 inches, micro projection, and projection of objects in a horizontal position by transmitted light with the use of vertical attachment.

The interchange from lantern slide projection to projection of opaque objects is instantaneous without taking down or building up any part of the apparatus. With the vertical attachment in position the change is made instantly from opaque projection to either vertical or lantern slide projection. When the projection microscope is in position the change from micro projection to either lantern slide, vertical projection or opaque is instantaneous.

**Base**—Of cast iron, 25 in. in length; carried at height of 7 in. from table by two cast iron supports of 11-in. spread with elevating screws front and rear.

**Lamp House**—Measures 13½ in. long, 13½ in. high and 7½ in. wide, light-tight and freely ventilated, constructed of double sheet metal walls, with an air space between the two walls and the roof fitted with B. & L. special patented ventilator; provided with large, light-tight spring door on the side and observation windows on both sides; mounted between uprights at front end and provided with handle at rear, permitting it to be easily tilted for opaque projection, and held rigidly in position by strong spring arm; conforms to the most rigorous requirements of Boards of Underwriters.

**Illuminant**—Hand-feed arc lamp for direct or alternating current.

**Condensing System**—Consists of two rear lenses of B. & L. triple system, 6-in. diameter, in ventilated mount directly in front of lamp house, rendering light approximately parallel in dark chamber, and a plano-convex lens placed in front of the mirror box for lantern slide work, completing triple system.

**Object Holder**—Round, of heavy metal, mounted on double arm with spring hinge at each end and handle at holder end; the whole adjustable for height on a grooved vertical standard and provided with set screw; will accommodate objects of widely varying thickness and size, the holder always remaining parallel to base and automatically bringing object into proper plane of projection; dark curtain in front of opening prevents light from flooding room when object is being changed.

**Mirror Box**—Of sheet metal, prism shape and light-tight; mounted over opening in top of dark chamber and containing stationary mirror at suitable angle to reflect beam of light through lantern slide.

**Projection Lenses**—Two Bausch & Lomb Standard lenses with rack and pinion focusing adjustment, that for lantern slides regularly of 8-inch focus, 1½-in. diameter, and that for opaque work of 15-inch focus, 4-in. diameter; lenses of other foci may be substituted if so specified.

**Dimensions**—Length over all, 38 in.; height, 24 in.

**Vertical Equipment**—Regularly furnished with Universal Balopticon No. 348½ only, but can be ordered separately and easily added to No. 34888; consists of a rectangular metal plate, 6½ x 12 in., with circular opening at either end; over one end is mounted a plano-convex condensing lens with plane side up, to complete triple condensing system for vertical projection and provide stage upon which to work; upright grooved standard near opening carries 10-in. focus, 1½-in. diameter projection lens and mirror for vertical work; over other opening provision is made for mounting mirror box with lantern slide equipment; for quick transformation from one form of projection to the other entire plate slides on metal rods and is operated by convenient handle.

**Possible Attachments**—The medium microscope, or large microscope, and any standard moving picture attachment can be used successfully with this Balopticon.

**Price List** on following page.

No. 44912. Convertible with Large Projection Microscope on Swinging Mount Providing Immediate Interchange with Lantern Slide Objective

No. 44912. Convertible for Opaque and Lantern Slide Projection

No. 44912 with Lamp House Tilted for Opaque Projection by Direct Illumination

No. 44912. Optical Scheme, showing Path of Light in both Lantern Slide Projection and Opaque Projection with Direct Reading Text

No. 44912. Optical Scheme, showing Path of Light in Opaque Projection by Direct Illumination, i.e., with Reversed Text

No. 44932

No. 44944

No. 44928

No. 44952

No. 44956

No. 44964

Bausch & Lomb manufacture three different models of Projection Microscopes—the Simple, Medium and Large—designed for use with their different Balopticons. The Simple Microscope has no eyepiece and is designed for work with low power objectives, particularly with their Model C Balopticon. The other two models are compound microscopes with both coarse and fine adjustments and high grade equipments. The Medium is illustrated with Universal Balopticon on page 442, and the Large with the Convertible Balopticon on page 444.

44928.	Simple Microscope, including substage condenser and three diaphragms for use in slide carrier.	15.00
44932.	Medium Microscope, including projection eyepiece, substage condenser and three diaphragms for use in slide carrier; without objectives.	37.50
44936.	Medium Microscope, mounted on swinging arm for Model D or Convertible Balopticons.	45.00
44940.	“ “ mounted on special swinging arm for Universal Balopticon.	45.00
44944.	Large Microscope, including amplifier, projection eyepiece, substage water cell, three substage condensers, triple revolving nosepiece and three diaphragms for use in slide carrier; mounted on swinging arm, without projection lens or objectives.	100.00
44948.	Large Microscope, as above, but with 32, 16 and 8 mm objectives added.	117.00
44952.	Vertical Attachment for Model C Balopticon.	10.00
44956.	Vertical Attachment for Model D or Convertible Balopticon, with prism shaped mirror box and stationary mirror.	15.00
44960.	Vertical Attachment for Convertible Balopticon or Model D, with rectangular dark chamber and movable mirror permitting interchange with other forms of projection.	30.00
44964.	Vertical Attachment as described above, but with front standard, bellows and 1½-inch diameter projection lens.	42.00
44968.	Vertical Attachment, with reversing prism for use with microscope.	37.50
44972.	Extra Front Standard for Convertible Balopticon.	3.00
Note—When the vertical attachment remains in a permanent position on the Convertible Balopticon, it is well to have an extra front standard, so that one may be used on the horizontal and the other on the vertical bed.

35 ft.		11	6 $\frac{1}{2}$		11		
40 ft.		13	7 $\frac{1}{2}$				
50 ft.			9 $\frac{1}{2}$				
60 ft.			11				

Example: An 18-inch lens used at a distance of 20 ft. from the screen will project an image 8 ft. square.

## PYROMETERS

We are not manufacturers of Pyrometers and are not equipped to design or make installations of Pyrometers for special purposes, as such service in every instance is better performed by the original manufacturers. It is our custom to refer inquiries involving special designs to the maker who, in our opinion, is best qualified to meet the requirements of the case. We are prepared, however, to furnish standard equipments, for both laboratory and works practice, from reliable makers of each type of Pyrometer and always at original factory prices. As a convenience to users of this catalogue we print the following fixed points of the provisional temperature scale now in use at the Bureau of Standards, Washington, D. C. (Circular No. 7, "Pyrometer Testing and Heat Measurements").

Freezing or Melting Points			
Tin.....	232° C.	450° F.	Gold..... 1063° C. 1945° F.
Cadmium.....	321° C.	610° F.	Copper..... 1083° C. 1981° F.
Lead.....	327° C.	621° F.	Nickel..... 1450° C. 2642° F.
Zinc.....	419° C.	786° F.	Palladium..... 1550° C. 2822° F.
Antimony.....	630° C.	1166° F.	Platinum..... 1755° C. 3190° F.
Aluminum.....	658° C.	1216° F.	Alumina..... 2050° C. 3720° F.
Ag-Cu.....	779° C.	1434° F.	Tungsten..... 3000° C. 5430° F.
Silver.....	961° C.	1762° F.	
Boiling Points (Centigrade)			
Naphthaline.....			217°, 9 + 0.058 (H - 760)
Benzophenone.....			305°, 9 + 0.063 (H - 760)
Sulphur.....			444°, 6 + 0.090 (H - 760)

## TYPES OF PYROMETERS

**EXPANSION PYROMETERS.** suitable for measurements up to about 1400° F. These are based on the relative expansion of metals or of a metal and graphite, and are widely used in industrial establishments. Such instruments should be tested from time to time to correct for changes in zero.

**THERMO-ELECTRIC PYROMETERS.** In pyrometers of this type temperatures are measured by the magnitude of the electromotive forces set up between wires of different materials when one junction is exposed to the temperature to be measured and the other junction (or junctions) is kept at some known temperature. For the measurement of temperatures in the interval 300° to 1600° C. thermocouples consisting of a wire of an iridium or rhodium alloy of platinum joined to a wire of pure platinum (usually designated as rare metal couples) are generally used. The most commonly used type, known as the Le Chatelier pyrometer, consists of a wire of 10% rhodium alloy with platinum joined to one of pure platinum. For the measurement of temperatures below 600° C. to that of liquid air (-200° C.) couples, known as the base metal couples, of iron-constantan, copper-constantan, etc., are used, as are also couples of iron, chromium, nickel, etc., and their alloys. These couples are more subject to oxidation than the platinum alloys and must be renewed more frequently.

**ELECTRICAL RESISTANCE THERMOMETERS.** The fundamental principle of the Resistance Thermometer is the fact that a change in the temperature of a pure metal causes a definite change in its resistance to an electrical current. The percentage change in resistance per degree change in temperature is more than twenty as great as the percentage change in the volume of mercury with temperature. The method of measurement employed is the Wheatstone Bridge in one or other of its forms. The bridge, instead of being calibrated in ohms, is calibrated in terms of temperature and is, therefore, direct reading in temperature units. This direct reading feature is made possible in the Leeds & Northrup product by a special method of adjustment which assures that, no matter how the purity of the metal may vary, all bulbs of a given class have not only the same resistance at a given temperature but also have the same rate of change of resistance with temperature. The merits of Resistance Thermometers and Pyrometers group themselves under the two headings of reliability and flexibility. There is no method of temperature measurements as flexible as the resistance thermometer. Not only may the bulb be made so small that its total volume need not exceed a cubic quarter inch, but this requisite volume may be of any desired form, flat or round, stiff or flexible. On the other hand, the bulb may integrate the temperature over as great an area as desired either as a large single unit or as a subdivided unit. Further, considering the equipment as a whole, the system is most flexible; any number of the various bulbs of a given class may be read on one indicator with any length or size of leads, and a system already installed may be increased at will by additional bulbs and additional switching facilities. In other words, all parts are electrically interchangeable. Further than this, the thermometer may be made, if so desired, in such form as to be practically free from thermometric lag; it may have a wide range at all points of which it is equally accurate, or it may have a short range selected for special work, giving an open scale of high accuracy. In short, throughout the range of temperature extending from the lowest known up to 1800° F., a resistance thermometer system may be laid out to have almost any desired characteristics.

**OPTICAL PYROMETERS.** In optical pyrometers the intensity of the light emitted by an incandescent body whose temperature is sought is measured by comparing the intensity of the light which the body emits with that emitted by some standard source, such as a gas-lamp or an incandescent lamp under specified conditions. Optical pyrometers are, therefore, essentially in principle photometers adapted to meet the varying requirements of shop and laboratory use. In these pyrometers light of a single color is generally used to get rid of the difficulties in photometry incident to color differences and also for the reason that the laws connecting the temperature of a body and the intensity of the light emitted are simpler if we deal with a single wave length (color) only.

**RADIATION PYROMETERS.** In radiation pyrometers the energy of total radiation (i.e. that associated with the long waves which do not affect the eyes, as well as the energy of the short light waves) is measured in various ways by the heat effect which it produces, such as by the electric current set up when the radiation heats one or more junctions of two dissimilar metals, the expansion produced by the heating of a compound metal strip, and the change in resistance of a very fine metal ribbon.

All of the above types of Pyrometers are furnished with recording as well as indicating instruments, with the exception of the Optical and Expansion Pyrometers. The descriptions given in the preceding paragraphs are mostly taken from the Bureau of Standards Circular No. 7, "Pyrometer Testing and Heat Measurements." We offer reliable instruments of the types mentioned on the following pages.

No. 45200 Horizontal Stem

No. 45208

No. 45201

45201. Pyrometer, Thermo-electric, Brown Stationary Type, with round pattern, large size millivoltmeter, graduated in Fahrenheit or Centigrade degrees, with base metal thermo-couple, for occasional use up to 2400° F. but for constant use at not over 1800° F. Complete with 36 inch thermo-couple in protecting case, as shown in illustration, and 50 ft. of double conducting wire..... 50.00
45208. Pyrometer, Thermo-electric, Brown Portable Type, similar to above but with galvanometer in portable case. The thermo-couple is usually supplied, as in illustration, with a protecting cap which is removed for instantly measuring temperatures up to 2400° F., or which can be left in position for permanent installation at temperatures up to 1800° F. For molten metals a special form of thermo-couple is furnished. Complete with scale graduated from 0-2400° F., with base metal thermo-couple and 15 ft. of flexible wire..... 50.00
45212. Pyrometer, Thermo-electric, Brown Recording Type, wall form for permanent installation, making a perfect ink record on a daily chart with eight day clock mechanism. The instrument is furnished at the same price in portable type for horizontal use on the laboratory table. Range of temperature the same as in preceding instruments. Complete with base metal thermo-couple and 100 ft. of leads..... 100.00

Note—Galvanometers are furnished with temperature scale in Fahrenheit or Centigrade degrees at the same price; with both Fahrenheit and Centigrade scales or with temperature and millivolt scales at \$5.00 additional.

No. 45212

**POTENTIOMETER INDICATOR (THERMOCOUPLE POTENTIOMETER)** Leeds & Northrup, a new Precision Instrument for use with Thermocouples and which greatly increases the range of their usefulness in both laboratory and shop practice. The instrument is based upon the potentiometer principle, so simplified in design as to be used by an ordinary workman. Some of the essential facts and advantages of this Indicator are as follows:—

The potentiometer indicator when calibrated in terms of millivolts may be used accurately with any thermocouple, regardless of its length, cross-section, or materials, or the length of its leads.

Many kinds of base metal thermocouples retain their calibration four or five times as long with this indicator as with a millivoltmeter.

It is completely portable and requires no levelling.

It has a scale 16 inches long—at least twice as long as the usual millivoltmeter; this means at least twice the accuracy in reading.

The thermocouples may, if desired, be long enough to have their cold ends located at the switch-board, thus having an equipment with one cold end.

The cold end temperature may be compensated for in the instrument.

No. 45250—Potentiometer Indicator

No. 45250—Electrical Scheme

The illustration of No. 45250 gives a view of the Indicator looking down on the face of the instrument. The regular routine reading is taken by depressing the key marked TC and by turning the handle which projects from the rubber plate, bringing the galvanometer to a balance. The reading is given by the scale under the index.

At intervals of say six hours, the keyed handle shown in the top of the box in the illustration should be inserted in the key ways at the side of the box, as shown in the illustration of No. 45250. The button SC should be depressed and the galvanometer brought to a balance by turning the keyed handle. This handle is keyed so that it may be removed to prevent tampering with the setting.

In course of time the dry cell of the equipment will become exhausted. At this time it will be impossible to secure a balance when the key SC is depressed. The dry cell used in the indicator is a No. 4 Columbia. To replace the dry cell turn the indicator upside down and remove the panel in the bottom of the case. The dry cell may now be changed, taking care to connect the new cell with its polarity the same as the old. For instruments which are to be permanently located at one point, we would recommend the use of an external battery consisting of two large dry cells (as Columbia No. 6) in parallel.

No. 45250 Indicator is provided with an auxiliary cold end adjustment, which, in effect, makes the instrument direct reading. This appears in the illustration as the small index and short scale lying just below the main scale. The small scale is set on its index at a point corresponding to the cold end temperature, and the readings of the instrument are then right without cold end correction.

The Potentiometer Indicator measures by balancing against the electromotive force to be measured a continuously variable known electromotive force. When the two are equal, the measurement is complete. The operation of reading, as described above, consists of balancing the electromotive force of the thermocouple against the fall in potential caused by the current flowing from the dry cell through any portion DG of the slide wire DE (see diagram). Since the dry cell is not constant, the adjusting rheostats  $RR'$ , are provided to maintain the current constant. By varying  $RR'$  the current flowing is adjusted until the drop between C and D is just equal to the standard cell voltage. It is this operation which is performed when adjustment is made with removable handle. Particular attention is drawn to the fact that the Indicator may be used with any thermocouple if the scale is in millivolts as it is regularly furnished. If scale is to be graduated in degrees of temperature the couple with which it is to be used must be sent to the factory for calibration with the Indicator. Indicator with range in millivolts from 0 to 16 is intended for use with rare metal couples and from 0-40 or 0-70 with base metal couples. Prices do not include thermocouples.

45242.	Potentiometer Indicator, as above, without cold end compensation range, 0-10, 0-16, 0-40 or 0 to 70 millivolts .....	125.00
45244.	Extra for other ranges whether calibrated in millivolts or in temperature units .....	5.00
45248.	Extra for double range .....	20.00
45250.	Potentiometer Indicator, as above, with cold end compensator ranges, 0-10, 0-16, 0-40 or 0-70 millivolts .....	140.00
45252.	Extra for other ranges whether calibrated in millivolts or in temperature units .....	5.00

**TEMPERATURE INDICATOR, Leeds & Northrup Balance Type, for use with all Resistance Thermometers of class A, 40 260° F., Class B, up to 1000° F., and Class C, to 1800° F., as listed below.** The Indicator consists of a direct reading Wheatstone Bridge with a self-contained Galvanometer of new design and great sensitivity. The Indicator is calibrated to read directly in degrees of temperature when connected to any bulb of a given class. The total length of the scale is 16 inches and, as a balance may be readily obtained to  $\frac{1}{16}$  of an inch, the Indicator is easily read to  $\frac{1}{16}$ ths of 1%. To make a reading with this

No. 45254—Temperature Indicator

No. 45260

Indicator, depress key to connect in battery and turn the scale until the galvanometer is at its balance position, at which time the position of the scale on the index gives directly the temperature. The operator in thus reading balances the bridge; in such a reading all questions of galvanometer calibration are eliminated. On this account a balance method is always more accurate than a deflection method.

45254. **Temperature Indicator**, as above, complete in carrying case, with galvanometer and battery; but without resistance bulb; length of scale 16 inches; case  $9\frac{1}{2} \times 5\frac{1}{2}$  inches; weight 51 lbs. .... 70.00

**RESISTANCE BULBS, CLASS A**, for use with the above Indicator. These are electrically interchangeable and differ only in the style of mounting used. They are regularly furnished in the following ranges:— $-40^{\circ}$  to  $120^{\circ}$  F.,  $+10^{\circ}$  to  $110^{\circ}$  F.,  $30^{\circ}$  to  $250^{\circ}$  F.,  $-20^{\circ}$  to  $120^{\circ}$  C. and  $-30^{\circ}$  to  $30^{\circ}$  C. Ranges other than those listed cost \$5.00 additional.

45256. **Resistance Bulb, for General Service**. This bulb is about as quick acting as the ordinary commercial mercury bulb. It has been designed to secure a maximum of strength and is practically indestructible. The leads are firmly anchored to the bulb. Tube is of brass with dull black lacquer; diameter of tube  $\frac{1}{8}$  inch; length of winding 2 inches with length over all 5 inches. .... 10.00

45260. **Resistance Bulb, Quick Acting**. This bulb will follow temperature changes about as rapidly as will a long bulb mercury thermometer and may be inserted into mercury without injury. Tube is of steel with ebonite head; diameter of tube  $\frac{1}{8}$  inch; diameter of head  $\frac{3}{8}$  inch; length of winding  $1\frac{1}{2}$  inches and  $4\frac{1}{2}$  inches length over all. .... 14.50

45264. **Resistance Bulb, with Non-conducting Case**. This is exactly the same as No. 45256 except that the stem is encased in ebonite. This construction is especially desirable when the bulb is to be used when considerable temperature difference will exist between the stem and the sensitive end of the bulb. The non-conducting stem prevents conduction of heat along its length. This bulb may be employed as "wet bulb" in hygrometry with success. Diameter of stem  $\frac{1}{8}$  inch; other dimensions same as No. 45256. .... 12.00

45268. **Resistance Bulb, with Lead Covered Leads**. This bulb is the same as No. 45256 excepting that it has lead covered leads. The lead cable is soldered with waterproof joint to the stem of the thermometer and, in ordering, a sufficient length of lead covered lead should be ordered to extend beyond the moisture zone. The cable used is  $\frac{1}{2}$  inch outside diameter with  $\frac{1}{16}$  inch wall. As widely used in the U. S. Department of Agriculture for soil investigations. With one foot of leads. .... 11.00

Extra per foot for additional length of leads. .... .15

**RESISTANCE BULBS, CLASS B**, for use with above Temperature Indicator in ranges, as follows:  $200^{\circ}$ – $1000^{\circ}$  F.,  $50^{\circ}$ – $550^{\circ}$  F.,  $50^{\circ}$ – $550^{\circ}$  C. and  $0$ – $250^{\circ}$  C. These bulbs are electrically interchangeable with each other in Class B and with those of Class C. The material is bare platinum wound on mica which is protected by a case of pure nickel without the use of porcelain.

45272. **Resistance Bulb, Round**, 10 inches long; length of winding and stem 10 inches; length of winding 3 inches; diameter of bulb  $\frac{3}{8}$  inch, of head  $1\frac{1}{2}$  inch. .... 28.00

Extra per inch for Bulbs longer than 10 inches. .... .75

45276. **Resistance Bulb, Quick-acting Type**. In this bulb the platinum wire is wound on a thin sheet of mica and this in turn insulated by a thin sheet of mica laid on each side of the flat coil. This is inserted into a flattened metal tube. The stem is left round. The large surface of this type of bulb and its low heat capacity make it extremely quick in its action; in a liquid it is practically instantaneous in its action. Length of winding and stem, 10 inches; length of winding 4 inches; thickness at winding  $\frac{1}{8}$  inch; width at winding  $\frac{1}{2}$  inch; diameter of stem  $\frac{3}{8}$  inch. .... 32.00

Extra per inch for Bulbs longer than 10 inches. .... .75

Extra if bulbs are to be used in pressures of over 50 lbs. per square inch. .... 2.00

**RESISTANCE BULBS, CLASS C**, for use with the above Temperature Indicator in the following ranges; 800°-1800° F., 200°-1800° F., 500°-1000° C. and 0-1000° C. These Bulbs are electrically interchangeable with each other and with those in Class C. The resistance material used is an especially pure platinum wound on a mica cross. The mica of this cross is treated by a process which leaves it of a hard, non-transparent, rock-like structure. In the standard type of construction this platinum wound form is encased in a Royal Berlin glazed porcelain tube. A clear quartz tube is at times desirable although it is slightly more expensive.

45280. **Platinum Resistance Bulb**, for measurements of the highest precision; porcelain tube with fibre head; length of bulb 3 inches; diameter of tube  $\frac{3}{16}$  inch; entire length of tube 19 inches; diameter of head  $1\frac{1}{4}$  inches. These Bulbs are widely used in permanent installations for some of the largest chemical works in the U. S.. When used in connection with the above Temperature Indicator No. 45252 the accuracy of the readings without correction is 3° in 500° or 6° in 1000° of range..... 60.00
45284. **Platinum Resistance Bulb**, of same construction as No. 45280. When bulbs of this type are used in connection with No. 45252 the accuracy of the readings without corrections and direct from the scale is 8° in 500° or 12° in 1000° of range..... 40.00
45288. Extra per inch for Bulbs over 19 inches in length..... .50

No. 45296 and No. 45304—Temperature Recorder. Curve Printing Type

**TEMPERATURE RECORDERS, Leeds & Northrup Patent**, for use with Leeds & Northrup Resistance Thermometers of class corresponding to the range required, and for use with Thermocouples. Consisting of a patented mechanism for moving with ample power a pen, print wheel, or other device, in response to the necessarily feeble deflecting forces of a sensitive galvanometer. These Recorders are furnished in the Curved Drawing Type for one temperature point, and in the Curved Printing Type for from two to sixteen temperature points. Motors will operate on 100-120 volts, a. c. or d. c., or 220-250 volts, a. c. or d. c., as specified. The paper speed is 3 inches per hour. The record in the Curve Drawing Type is made in ink by a pen, and in the Curve Printing Recorder by a print wheel drawn on a track by power supplied by the motor but controlled by the temperature. The process is entirely mechanical, only the motor and the measuring circuit involving electric current. The speed of the motor is automatically held constant even though the voltage on the line on which it is operated varies through a range of 20%.

45292. **Recorder for Resistance Thermometer, Curve Drawing Type**, for one temperature point. This instrument is a recording Wheatstone Bridge. When for use with resistance bulbs the recorder is calibrated to record directly in temperature units. The accuracy of the recorder is equal to  $\frac{1}{2}\%$  of the range of the instrument. The distance separating the recorder from the bulb whose temperature is being measured is without effect upon the record. Should it be desired to use the same recorder with different bulbs at different distances from the recorder this may be done by providing a suitable hand operated selector switch. The resistance thermometer has no feature corresponding to the "cold end" of a thermocouple. The indications of the recorder are controlled solely by the temperature of the sensitive end of the bulb..... 200.00
45296. **Recorder for Resistance Thermometers, Curve Printing Type**, for temperature points as indicated.

No. 45300 and No. 45292—Temperature Recorder. Curve Drawing Type

Fig 2

No. 45328

45300. Recorder for Thermocouples, Curve Drawing Type, for one temperature point, similar to No. 45292 except this instrument is a recording potentiometer. To record temperature it may be used with any thermocouple of any length, cross-section or material. With any thermocouple the accuracy of the record is entirely independent of the resistance of the leads and, therefore, of their length, cross-section and materials. For ranges of 15 millivolts and over, the accuracy of the record is  $\frac{1}{2}\%$  of the range; 15 millivolts are equivalent to about  $1500^{\circ}\text{C}$ . on a platinum platinum-rhodium couple and to about  $275^{\circ}\text{C}$ . on an iron constantin couple. 250.00

45304. Recorder for Thermocouples, Curve Printing Type, for temperature points as indicated.
- | No. of points.....                        | 2      | 4      | 6      | 8      | 10     | 12     | 14     | 16     |

45328. Pyrometer, Siemens Water, for temperatures up to  $1000^{\circ}\text{C}$ . or  $1800^{\circ}\text{F}$ . The metallic cylinders supplied with the pyrometer are exposed to the heat to be measured after which they are carefully inserted into the vessel containing exactly 1 pt. of distilled water. The rise in temperature of the water is measured by the mercurial thermometer furnished with the outfit. This reading added to the temperature of the water before the insertion of the heated cylinder will give the temperature of the flue, furnace or heated space in which the metal cylinder has been placed.

Duty Free..... 27.00

Stock..... 35.00

No. 45332

45332. Pyrometer, Optical, Mesure and Nouel, for temperatures up to  $1500^{\circ}\text{C}$ ., consisting of a quartz plate Q interposed between Analyzer A and Polarizer P. When polarized light which is not monochromatic passes through a properly prepared quartz plate, the plane of polarization is rotated through an angle the magnitude of which depends on the wave length of the light and the thickness of the quartz. The field will, therefore, appear colored according to the composition of the light which passes through the instrument. When an incandescent body is viewed through the instrument the analyzer is rotated until the sensitive tint is observed. The reading on the circle C determines the temperature to be measured with the aid of the scale furnished with the instrument. Complete in leather case.

Duty Free..... 32.50

Duty Paid..... 46.80

45336. Large Objective for use with above for accurate observations of temperatures below  $900^{\circ}\text{C}$ .

Duty Free..... 11.25

Duty Paid..... 16.20

Optical Scheme

Standardization of Osram Lamp

Direct Reading Temperature Scale

Amyl-Acetate Lamp in Position

In Operation

**PYROMETER, WANNER OPTICAL, 1914 Model**, consisting of a photometric telescope containing a standard Osram lamp with which the quantity of light emanating from the heated mass to be measured is compared. The Osram lamp must be standardized from time to time by adjustment with a standard Amyl Acetate lamp and current from the accumulator supplied must be controlled by means of a rheostat and ammeter. The new 1914 models listed below are distinctive from the instruments listed heretofore in that the whole range of temperature from 650° to 4000° C. can be measured on one instrument, whereas with the old outfits two instruments are necessary to cover the entire range. The prices have also been distinctly reduced on the new models. Some of the distinctive features embodied in the new 1914 model are as follows:—

Optical parts enclosed in polished metal protecting tube of uniform diameter.

Adjusting glasses placed entirely within the tube but adjustable from outside.

Simplified arrangement for interchange of incandescent lamp after removing outside tube.

Direct reading temperature scales very legible because of white graduations on black ground.

Outfits are complete for operation excepting the charging of the accumulators. Any of the Pyrometers are furnished with certificate of the Physikalisch-Technische Reichsanstalt at an extra cost of \$10.50 duty free and \$14.00 duty paid.

		Duty Free	Duty Paid
45340.	Pyrometer, Wanner Optical, for temperatures from 650° to 1200° C., as above described including amyl acetate lamp, support for standardizing, ammeter, resistance and accumulator; with graduations in degrees of arc and separate temperature scale.....	105.00	140.00
45344.	Pyrometer, as above, but with direct reading temperature scale.....	112.50	150.00
45348.	Pyrometer, Wanner Optical, for temperatures from 650° to 2000° C., complete as above, with graduations in degrees of arc and separate temperature scale.....	135.00	180.00
45352.	Pyrometer, as above, but with direct reading temperature scale.....	142.50	190.00

No. 45420

Method of Using Thwing Radiation Pyrometer

No. 45432

**PYROMETERS, THWING TOTAL RADIATION.** for the accurate measurement of high temperatures, based on Stefan-Boltzmann Radiation Law, i.e., the energy radiated by a black body is proportional to the fourth power of the absolute temperature. With no upper limit, and used commercially for temperatures as low as 500° C. Radiations of heat from a black body, or body under black body conditions as in an enclosed furnace, are concentrated by means of a receiving tube on a sensitive thermocouple and hence conveyed to the galvanometer, where temperatures are read directly in degrees. As the thermocouples have but small heat equilibrium, a reading can be obtained in five seconds. No tripod is required, the receiving tube being held in the hand and pointed at the object temperature of which is to be measured. No focussing is required as the instrument is practically independent of distance, so long as the diameter

# Thwing Radiation Pyrometer (Continued)

of the surface is 1 inch for each 8 inches of distance for a low range instrument and correspondingly less for instruments of higher range. Any intelligent workman can operate the instrument as nothing is required other than to point the receiving tube at the object and read the temperature from the scale. The outfit is not dependent upon storage batteries or standard of luminosity or upon the color perception of the observer and is equally accurate in determining temperature of hot metals in the open and not affected by extraneous light falling upon the body observed. Galvanometer is dead-beat, extremely sensitive and highly accurate. Complete outfit weighs 7 lbs.

45420. **Pyrometer, Thwing Portable Indicating Radiation**, with any single range temperature scale, complete..... 120.00
45424. **Pyrometer, Thwing Portable Indicating Radiation**, with any double range temperature scale, as 2500° F. to 3600° F., 2000° C. and 1400° C. These two scales are especially suited for open-hearth furnace work, giving correct temperatures of molten steel in the furnace and while pouring. Complete..... 130.00
45428. **Pyrometer, Thwing, Wall Pattern Indicating Radiation**, with ventilated receiving tube for permanent installation above a furnace, or barium chloride bath..... 120.00
45432. **Pyrometers, Thwing, Recording Radiation**, in single and multiple record units. These Pyrometers have been found of extreme value on cement kilns, in copper smelters, incinerators, sintered ore plants, etc. With single record recorder..... 180.00
45436. **Pyrometers, Thwing, Recording Radiation**, as above, with two record recorder..... 245.00
45440. **Pyrometer Cones, Seger**, for temperatures from 600° C. to 2000° C.  
 Note—Prices of Multiple Records up to 15 records on a single 10 inch chart, quoted on request.  
 Per box of 100..... 1.00 Each, in quantities less than 100..... .05  
 The following are the official melting points:—

## RADIO-CHEMISTRY APPARATUS

45540. **Radio-Active Minerals**, consisting of the strongest minerals from which radium is being extracted. Radiographs may be taken with any of these specimens by placing the mineral or ore on the sensitive side of a plate in a black and orange cover and allowing same to remain in a dark place for two or three days, after which development is carried on in the usual way. The specimens in this collection and their localities are as follows:—

Pitchblende.....	Joachimsthal.....	Autunite.....	Portugal.....
Carnotite.....	Colorado.....	Aeschynite.....	Ural.....
Fergusonite.....	Ceylon.....	Tantalite.....	Sweden.....
Monazite.....	Brazil.....	Pitchblende.....	Cornwall.....
Samarskite.....	Norway.....	Clevite.....	Sweden.....
Thorite.....	Ceylon.....	Orangite.....	Norway.....

Collection, as above, of twelve specimens..... 7.50

No. 45542

No. 45546

45542. **Spinthariscopes**, a fluorescent screen over which is mounted a small particle of radio-active substance. When viewed through the magnifying lens brilliant scintillations are observed. When observations are made in daylight it is necessary to remain in a dark room for about five minutes before scintillations are plainly visible. Small radium photographs may be made with the instrument and exposures made on photographic negatives by removing the magnifying lens.... 2.50
45546. **Standard Battery, Krueger**, for electrostatic measurements, consisting of 100 Weston Normal Elements of small size with a total electromotive force of about 100 volts and with 105 ohms internal resistance. With six terminals. As used in charging electrometers, standardizing electroscopes, etc.  
 Duty Free..... 18.00      Duty Paid..... 24.00

No. 45548—in portable carrying case

No. 45548—ready for use

45548. **Electroscope, Curie Type**, portable model of American make for field use in the determination of the radio-activity of American ores, such as the Colorado Carnotite, and as used in the U. S. Bureau of Mines laboratories for this work. The illustration shows the door of the ionizing chamber closed so that the circular plate, on which the powdered ore for testing is placed, is not shown. The instrument is furnished with a reading microscope with millimeter scale in the ocular and with portable carrying case as shown. In the case are provided receptacles for two standardized samples of powdered Carnotite as listed below. In the field the testing is made by measuring the rate of fall of the leaf with the ore to be tested as compared with a standardized ore of known Uranium content. With vulcanite charging rod and descriptive circular as to operation..... 50.00
45550. **Carnotite**, powdered to 60 mesh, with percentage of Uranium Oxide ( $U_3O_8$ ) determined by Ledoux & Co., for use as a reference standard with above Electroscope. Per 50 gram vial..... 1.50

**ELECTROSCOPE, CURIE, original French make.** This instrument is furnished with equipment for measuring the radio-activity of solids, liquids and gases and also in a small portable form for field work. The laboratory form for solids is conveniently arranged so that measurements of a great range of radio-activity as compared with that of Oxide of Uranium are possible. These adjustments are accomplished either by varying the area exposed on the plate "D" of the material to be measured or by changing the form of the discharging rod "I". Illustration No. 45540 shows the Electroscopie as arranged for solids, No. 45544 for liquids and gases and No. 45548, the portable form for field work. Each instrument is furnished with reading microscope "M", with micrometer scale on the ocular, with which the fall of the leaf during discharge is very accurately measured. The principal constants of this apparatus as furnished by the French makers are as follows:—

The potential required to deviate the leaf through the entire field of the microscope is about 300 volts and the value of each division in the eyepiece micrometer is 0.4 volt but readings may be estimated to 0.1 volt. The capacity of the Electroscopie when mounted on a cylinder of 3 liters is 14 to 15 cm, this capacity being independent of the angle of deviation. The speed of the spontaneous fall of the leaf under the best conditions, for instance 0.0033 div/sec, is 0.0013 volt/sec. The minimum speed of the fall measurable (ten times as great as the natural leak) is 0.01 volt sec. The minimum current measurable in the cylinder is  $2 \times 10^{-18}$  amperes. The minimum quantity of radium emanation measurable in the cylinders of 3 liters is 0.0019 mmg. min. The minimum amount of Radium Bromide which can be estimated by the emanation method (this quantity corresponds to that contained in 10 liters of sea water or in 50 grams of deep sea sand) is  $2, 3.10^{-7}$  mmgr. See *M. Joly, Phil. Mag., mars et juillet 1908*. The minimum radio-activity measurable in solids, taking Oxide of Uranium as unity, is 1/200. See *P. Curie, Œuvres, p. 375, p. 591 et 593; Mme. P. Curie, Ann. Ch. Phys., Septembre, Oct. Nov., 1903; Mme. P. Curie, "Traité de Radioactivité" (Gauthier-Villars); Mme. P. Curie, "Le Radium," 7, 1910, p. 65 à 70; and A. Laborde, "Méthodes de mesure employées en Radioactivité" (Encyclopédie Léauté, Gauthier-Villars, edit).*

45532.	Electroscopie, Curie, complete for mineralogists, with reading microscope and discharging apparatus with plate and accessories.		
	Duty Free.....	56.25	Duty Paid..... 67.50
45534.	Electroscopie, Curie, as above but without the lower cylinder, base and plate D, for mounting specially to suit the work intended.

No. 45588

No. 45598

45588. **Electrometer, Dolezalek Pattern**, with long ambroid insulation to quadrants and terminals, the latter being placed in a very convenient position on top of the instrument and readily removable for cleaning. The suspension is strong phosphor-bronze with high sensitivity. Ample adjustment in height and rotation of the vane relative to quadrants is provided with zero adjustment without altering relative position of vane and quadrants. The scale readings are proportionate over a wide range. The use of phosphor-bronze suspension renders this instrument suitable for students' work, the sensitivity being approximately 300 millimeters at one meter radius for a difference of potential of one volt between the quadrants with the vane charged at 100 volts.

| Duty Free | 46.50 | Duty Paid | 68.20 |
|-----------|-------|-----------|-------|
45596. **Electrometer, Dolezalek Pattern**, same as No. 45588 but with silvered quartz fibre suspensions, increasing the sensitivity about 100%. Price on application.
45598. **Electroscope, Double-tilted Pattern, Bumstead**. The two plates attached to the terminals are charged to equal the opposite potentials, usually 200 volts, and the gold leaf kept vertical and central by means of levelling screws. The sensitiveness and stability are easily altered by raising or lowering the leaf by means of the fine adjustment provided. This instrument has a sensitivity about three times that of the ordinary tilted form listed below for equal stability. The plates are insulated with ambroid and an earthing terminal is fitted into the case. The insulation of the leaf is ambroid. See *American Journal of Science*, December, 1911.

|----------------|-------|----------------|-------|
45668. Electroscopic, Emanation, Rutherford, of variable capacity for the measurement of emanations from radio-active bodies and also to detect the presence of both Thorium and Actinium emanations. If a stream of air conveying the emanation under investigation is passed through the electroscope, the variation in the rate of movement of the gold leaf when the current of air is stopped indicates at once the nature of the emanation present. If the rate of movement increases with time, the Radium emanation is present; if it falls to half value in 54 seconds, the Thorium emanation is present; and if it practically disappears in the course of 20 seconds, the discharge is due to the Actinium emanation. When it is required to determine the amount of Radium emanation in a solution, the latter is boiled to drive off the emanation and the gases mixed with emanation are collected over hot water and introduced into the partially exhausted electroscopic. Air is then let in, and the pressure raised to atmospheric value. The rate of discharge of the electroscopic increases rapidly after the introduction of the Radium emanation and reaches a maximum value after about three hours, and then slowly decays with a half value period of 3.86 days. Measurements of the rate of discharge are made either at a certain definite time after the introduction of the emanation, or preferably three hours after its introduction, and the rate of movement of the gold leaf (corrected for the natural leak) is a measure of the amount of emanation introduced. The electroscopic is standardized by means of a Radium Standard Solution, containing about one-millionth of a milligram of Radium. The Radium in the form of solution is kept in a sealed flask and one month after sealing the amount of emanation reaches its equilibrium value. The Radium Solution is then boiled and the emanation transferred, as before, into the electroscopic and the rate of movement measured under definite conditions. In an apparatus of this kind the emanation from  $10^{-6}$  of a milligram of Radium gives a comparatively rapid rate of movement; a quantity corresponding to  $10^{-7}$  milligram can easily be measured, while  $10^{-8}$  milligram produces a detectable effect. The apparatus consists of a cylindrical chamber of brass closed at either end and provided with inlet and outlet tubes and having a capacity of about one liter. Fitted to the upper end of the cylinder is an insulated plug of special design, having an extremely small natural leak, and so arranged as to be quite tight against a high rate of exhaustion in the vessel beneath. Attached to above plug is a small brass rod of about one millimeter diameter the lower end reaching to within one or two millimeters of the bottom of cylinder; to the upper end is attached the gold leaf system in upper cylindrical cover and viewed through the windows as shown. The upper cylindrical cover of brass is fitted with a variable capacity device by means of which the capacity may be increased two or three times, this being effected by using two circular plates, one attached to the leaf support and the other to the end of adjustable rod, shown at right of illustration.

## REFRACTOMETERS.

**REFRACTOMETERS, ZEISS.** The use of the Refractometer in its various forms in the modern chemical laboratory has increased with great rapidity. We recommend those who are not familiar with the construction or use of these instruments to apply to us for the following literature published by the firm of Carl Zeiss.

Mess 160.	Optical Measuring Instruments.	Mess 292.	New Sugar Refractometer.
" 165.	Dipping Refractometer.	" 186.	Use of the Abbe Refractometer in the Sugar Industry.
" 172.	Abbe Refractometer.	" 189.	Dr. Wagner's Tables regarding the Immersion Refractometer.
" 173.	Butter Refractometer.		
" 188.	Pulfrich Refractometer.		
" 245.	Interferometer for Gas and Water.		

and particularly for the list of refractometrical literature, which has become too extensive to refer to in this description, all of which are sent free of charge.

No. 45760

No. 45764

No. 45772

No. 45776

- 45760. Refractometer, Abbe, Zeiss, with Heatable Prism,** for the determination of refractive indices between  $n_D = 1.3$  and  $n_D = 1.7$  in fluid, plastic and solid bodies. The refractive index is read directly from the graduated circle. This instrument has found wide application in tests as to purity, the determination of the proportion of known components in a mixture and in the analysis of food products, particularly butter, cheese, margarine, cocoa fat, lard and other comestible fats; of salad oils, cod-liver oil, lubricants, alkalies, linseed oil, varnish, turpentine, petroleum, paraffin, ceresin and other kinds of wax; glycerine, aniline; aqueous, alcoholic and ethereal solutions as, for instance, the solution of ether and milk-fat adopted in Naumann's method of determining the percentage of fat in milk; milk serum; and for determining the quantity of albumen in blood serum in clinical work. The Abbe Refractometer with heatable prisms may also be used for the purposes for which the Butter Refractometer and the Milk Fat Refractometer were originally intended by use of the conversion tables furnished with each instrument and the two special thermometers which are usually supplied only with the Butter and Milk Fat Refractometers. The accuracy in measurement is to about two units of the fourth decimal place. In case with Table of Dispersion and Conversion Tables, and stem thermometer divided in single degrees from  $0-75^\circ \text{C}$ .
- |           |        |       |        |

| Duty Free | 100.90 | Stock | 137.30 |
|-----------|--------|-------|--------|
- 45764. Refractometer, Butter, Zeiss,** for preliminarily testing butter refractometrically, also for investigating fats, salad oils, etc.; scope of the ocular scale from  $n_D = 1.42$  to  $n_D = 1.49$ ; micrometer screw for measuring the tenths of a division of the scale, accuracy in measurement one unit of the fourth decimal. With a small flask of "standard fluid" for the revision of the adjustment of the ocular scale, a table for converting the scale divisions into refractive indices. In case, with ordinary thermometer in  $\frac{1}{2}^\circ$  from  $0-50^\circ \text{C}$ ., with screw joint connection for attaching to the Refractometer.

| Duty Free | 50.90 | Stock | 69.30 |
|-----------|-------|-------|-------|
- 45768. Refractometer, Milk Fat, Zeiss.** This Refractometer resembles externally the Butter Refractometer and in both construction and manipulation is the same. The essential difference between the two consists in the range, and in the case of the Milk Fat Refractometer is from  $n_D = 1.33$  to  $n_D = 1.42$ , while the Butter Refractometer is from  $n_D = 1.42$  to  $n_D = 1.49$ . The Milk Fat Refractometer has an accuracy in measurement to one unit of the fourth decimal. Complete in case, with table for conversion of scale divisions into refractive indices and vice versa, and including correction thermometer to reduce the observations to  $17.5^\circ \text{C}$ .

Note—Unless otherwise specified the above Refractometers are always supplied with the stem thermometer, as above listed.

No. 45788

Nos. 45808 to 45811

- 45788. Refractometer, Dipping, Zeiss, for Investigating Fluids of Low Refractive Index, especially dilutions, alcoholic, volatile solutions, etc.;** scope of the ocular scale from  $n_D = 1.325$  to  $n_D = 1.367$  with an accuracy in measurement to one-third unit of the fourth decimal. In above illustration the refractometer hangs on the wire frame with its lower end, the prism, immersed in one of the glass beakers filled with the solution to be tested, the beakers being surrounded by flowing water at the required temperature. A rectangular mirror below the trough reflects the light from below through a glass plate into one of the rows of glass beakers. Because of its accuracy and extremely simple operation, the Dipping Refractometer has become an indispensable instrument in the examination of various products as to their purity, analysis of standard solutions, and to the rapid and very exact determination of the concentration of solutions. Dr. B. Wagner's tables of various substances which have been investigated by means of the Dipping Refractometer are recommended for use in connection with it. (Price \$5.00). Complete in case, with free standing refractometer prism of acid-proof glass, with attachable beaker for the investigation of quickly evaporating solutions and with a table for the conversion of the scale readings into refractive indices, but without Auxiliary Prism, heating trough or thermometer. Duty Free..... 62.50 Stock..... 85.00

#### Accessories for the Dipping Refractometer.

- 45792. Auxiliary Prism** for investigating fluids in very small quantities, for deeply colored solutions, such as molasses, dark beers, etc., and for the determination of albumen in blood serum. With unpolished surface of contact slightly countersunk. Duty Free 3.00 Stock 4.08
- 45796. Heating Trough**, as shown in illustration of No. 45788, for the reception of 12 glass beakers, each containing 20 cc, for investigations in bulk, with a glass plate at the bottom of the trough and mirror below, and with 24 beakers. 7.50 10.20
- 45800. Thermometer**, 15-25° C. divided in  $\frac{1}{10}$ ths, in metal case, with certificate of accuracy. 4.25 6.12
- 45804. Stem Thermometer**, 15-25° C., divided in  $\frac{1}{10}$ ths, about 8 cm long, with a red line at 17.5° C. .56 .81
- Tempering Bath**, for use without a continuous flow of water, recommended when the Refractometer is only used occasionally and for investigations at indoor temperatures. The construction of this bath is based on the fact that a large volume of water with a comparatively small surface area is very slow in acquiring the temperature of the surrounding space. The outfit consists of the following:—
- 45808. Enamelled Pan**, of about 10 liters capacity, with felt jacket and over-flow joint, 1 meter of rubber tubing and stopcock. Duty Free 3.88 Stock 5.58
- 45809. Filler**, for uniformly introducing fresh water into the pan without stirring, with funnel. 1.25 1.70
- 45810. Carrier (L)** for Refractometer, with mirror. 6.06 8.25
- 45811. Umbrella Frame**, for 12 beakers of 20 cc capacity; and with 24 beakers. 6.63 9.01

No. 45812

No. 45828

**REFRACTOMETER, SUGAR, ZEISS**, a new and special adoption of the **Abbe Refractometer** for the sugar industry. The wide adoption of the refractometric method of determining dry solids in sugar factory products has resulted in a simpler model of the **Abbe Refractometer** (heretofore widely used in the sugar industry), constructed with the cooperation of the **Physikalisch-Technische Reichsanstalt** and the **International Commission for Uniform Methods of Sugar Analysis**. A distinct improvement is in the prism which is an **Abbe double prism** made of lighter flint glass and which gives a more open scale than the prism used in the **Abbe Refractometer** and which noticeably reduces the error in the refraction quotient. The scale reads directly in percentages of dry substance and is now in the field of the telescope and is divided from 0-50 for whole percents and from 50-85 for half percents of dry substances. With this new instrument the darkest ordinary molasses may be accurately tested directly, without dilution. The instrument is adjusted regularly for 20° C. but, when intended for use in tropical countries, is adjusted for 28° C., the temperature of adjustment being engraved on each instrument.

45812.	<b>Refractometer, Sugar, Standard Model</b> , as above, adjusted for 20° C., with special thermometer from 0 to 50 in $\frac{1}{2}^{\circ}$ with screw mounting.		
	Duty Free	75.90	Stock 103.22
45816.	<b>Refractometer, Sugar, Tropical Model</b> , adjusted for 28° C., with special thermometer as above.		
	Duty Free	75.90	Stock 103.22
45820.	<b>Thermometer</b> , only, 0 to 50°C in $\frac{1}{2}^{\circ}$ , with screw mounting.		
	Duty Free	.90	Stock 1.30
45824.	<b>Thermometer</b> , only, as above, with fixed metal case.		
	Duty Free	1.25	Stock 1.80
45828	<b>Refractometer, Pulfrich, Zeiss</b> , designed for measurements of refraction ( $n_D$ ) and dispersion (difference of indices for the Fraunhofer lines C D F and G <sup>1</sup> ) of transparent, fluid and solid bodies, either single or double refracting; investigations of fluids at high temperatures, including bodies that are fluid only under such conditions; and the determination of the differences of refractive or dispersive power of such solid or fluid substances as differ but little in their optical properties. (The instrument is then used as a differential refractometer.) In the construction of the accessories which serve for the purposes mentioned above, special attention has been given to securing simplicity in the methods of observing and in the subsequent computations. All parts of the apparatus are, therefore, permanently fixed in position after being once properly adjusted, and hence are always ready for use. The computations for dispersion and other differential quantities from the data given by the observation are made by means of suitable tables in the same manner as hitherto for $n_D$ without the use of logarithms. In regard to accuracy the apparatus is designed to meet the requirements which are usual in spectrometric measurements, i.e., exactness to a single unit of the fourth decimal place in the refractive index and to one or two units of the fifth decimal place in the dispersion and other quantities depending upon differential measurements. With Geissler tube, cabinet for the instrument and case for the prisms and accessories, and detailed directions for use, but without prisms or heating apparatus.		
		Duty Free 118.75	Duty Paid 161.50

Duty Free 212.90	Duty Paid 289.54

No. 45908

**Spiral Hot Water Heater with Water Pressure Regulator** for use with any Zeiss Refractometers. The Dipping Refractometer as shown in No. 45788 with heating trough may, in many investigations, be used without a Spiral Heater and Water Pressure Regulator, it being sufficient to allow the water at the temperature of the room to flow slowly through the heating trough from a tank suspended up on the wall. Where it is necessary to maintain a given temperature for hours at a time to within a few tenths of a degree as, for instance, in Dr. Ackermann's rapid method for the estimation of alcohol and extract in beers, either a Tempering Bath No. 45808 or the Spiral Heater and Water Pressure Regulator must be used.

45908.	Spiral Heater, with support and Bunsen burner	Duty Free 15.25	Duty Paid 20.74
45912.	Cistern A, of Water Pressure Regulator	1.75	2.52
45916.	Cistern B, of Water Pressure Regulator	1.25	1.80

**Note**—Where the Water Pressure Regulator is to be used with an Abbe or Pulfrich Refractometer, the complete Water Pressure Regulator with Cisterns A and B is required.

Percent Sugar Table According to Refraction Indices with the Sugar Refractometer.

Refraction Exponent	Schönrock	Main	Tolman and Smith	Prinsen-Geerligs	Hübener
1.3403	5%	5.2%	5.0%	5.0%	5.1%
1.3479	10	10.2	10.1	10.1	10.0

1.3639	20	20.1	20.1	20.2	20.0
1.3723	25	25.1	25.1	25.1	
1.3811	30	30.0	30.1	30.0	
1.3902	35	35.0	35.0	35.0	
1.3997	40	40.0	40.0	40.1	
1.4096	45	45.0	45.0	45.0	
1.4200	50	50.0	50.0	50.0	
1.4307	55	55.1	55.0	54.9	
1.4418	60	60.0	60.0	59.9	
1.4532	65	64.9	64.9	65.0	
1.4651		75	69.9	69.8	
1.4774		70	74.9	74.7	
1.4901		80	79.9	79.9	
1.5033		85	85.0	84.9	

The first column in the above table shows the refraction quotient for sodium light in air at 20° C. and the second the corresponding sugar percents, i.e., the number of grams of sugar in 100 grams of pure sugar solution, calculated according to Schönrock. The remaining columns give the sugar percents for the corresponding refractive indices of the first column according to the calculations of Main, Tolman and Smith, Prinsen-Geerligs and Hübener, the value of Prinsen-Geerligs being transposed from 28° to 20° C. The variations in these tables (the first having been determined in Charlottenburg, the second in London, the third in Washington, the fourth in Java and the last in Halle) are within the limits of error permitted by the sugar trade.

#### DR. EMIL REISS' TABLE

for direct calculation of the Scale Divisions, percentage of Albumen, at 17.5° C. with the Dipping, Refractometer.

As this table is in frequent demand in Clinical Laboratories, but is otherwise somewhat difficult of access we are enabled, by the author's kind permission, to reproduce it in full.

Laboratory Interferometer (about  $\frac{1}{10}$  Full size). Kl = Collimator. L, G = Air and Gas Chambers. F and Ok = Reading Telescope.

**REFRACTOMETER (GAS AND WATER INTERFEROMETER) ZEISS**, a new instrument for the optical analysis of gas and water developed at the Zeiss works in coöperation with Prof. Haber, of Berlin, consisting of a modification of Lord Rayleigh's type of apparatus wherein readings are taken by means of a system of optical compensation instead of by a pressure gauge, affording a much more rapid and convenient means of working and which improvement permits the construction of the instrument in a portable form. The Gas Refractometer is made in two ranges of accuracy, the first known as the Laboratory Interferometer reading the per cent of  $\text{CO}_2$  to within 1/50% to 1/100%, and the Portable form reading to within  $\frac{1}{10}\%$  to  $\frac{1}{2}\%$  of  $\text{CO}_2$ .

#### Purposes for which the Gas Interferometer is available.

The Gas Interferometers serve for ascertaining the difference between the refractive indices of a given gas and a standard gas. The method of optical analysis is directly applicable to all binary mixtures of gases, i.e., all mixtures of two gases, which includes all commercially pure gases, such as oxygen, nitrogen, hydrogen, carbon dioxide, etc., provided the given gas is contaminated by only one other gas which is known from the nature of the process of manufacture. In this connection binary mixtures of gases may also take the form of a primary mixture of unvarying composition and a quantitatively variable component, i.e., normal air containing an admixture of a gas, such as carbon dioxide, chlorine, or acetylene; and, where the initial fuel was known, also flue gases which do not contain carbon monoxide may be regarded as binary mixtures of theoretical flue gas and an excess of air.

Finally, the method applies to all mixtures from which one or more components can be easily removed by quantitative absorption. A case in point is that of flue gases containing carbon monoxide. To determine the percentage of carbon dioxide in a mixture of this kind one of the gas chambers may be filled with dried flue gas, the other with dried flue gas freed of its  $\text{CO}_2$ , when the reading will give the proportion of  $\text{CO}_2$  present in the mixture. Similar cases arise in the examination of gaseous products occurring in the intermediate stages of chemical processes of manufacture.

The Gas Interferometers are now being used for the technical as well as scientific analysis of gases in connection with a great variety of experimental investigations carried on in laboratories attached to mines, experimental borings, chemical works manufacturing commercially pure compressed gases and others having to control the composition of gases occurring as intermediate products, public health offices and medical institutes for the systematic analysis of air, steam users' associations, and institutions devoted to researches in physics and physical chemistry. We shall be pleased to provide further information and suggestions respecting the application of the apparatus.

Fig. 3

Fig. 4

**Diagrammatic View (Fig. 3; Elevation; Fig. 4; Plan) of the Laboratory Interferometer.** The parallel pencil of rays which proceeds from the collimator Kl splits up, the upper half passing over the gas chamber (Fig. 3) and through the auxiliary plate above the compensator Pl, next through the double slit (Fig. 4) into the telescope F, whilst the lower half passes partly through the gas chamber G, and partly through the air chamber L, thence under H, through the compensator plates P<sub>2</sub> and P<sub>1</sub> respectively, and through the double slit into the telescope F. The resulting diffraction spectra are seen in the eyepiece Ok. The micrometer screw with its drum Tr serves for turning the compensator plate Pl, whereas P<sub>2</sub> is stationary.

# Applications of the Water Interferometer

The Water Interferometer is susceptible of a degree of accuracy which is 5 to 50 times greater than that of the Dipping Refractometer and is primarily intended for the rapid testing of natural waters. In the case of river water it serves for ascertaining the proportion of salts which enter rivers with the waste waters discharged by manufacturing establishments and which under local regulations are not allowed to exceed a certain percentage.

The Interferometer furnishes a convenient means of ascertaining the course of flowing subsoil water from the analysis of the samples.

The instrument furnishes, to quote another instance of its utility, a convenient means of continuously controlling the water supplied by mineral springs, wells, or storage basins. Water contained in engine boilers can be tested on the spot within a few minutes with respect to the whole of the salts present in solution.

The analysis of seawater, as required for oceanographic purposes, demands a degree of accuracy which can only be attained with the aid of volumetric analysis by titration immediately after the sample has been obtained, that is, on board. The Water Interferometer has from the outset been so designed as to be available for use on board, and, with a short water chamber, furnishes readings which are quite as exact as those obtainable by the method of titration, while when used with its longest water chamber it can be applied for minute investigations such as hitherto could not be thought of. Moreover, owing to the high degree of accuracy of which the Water Interferometer is capable very sparingly soluble substances have now been made to yield to the refractometric method of analysis, i. e., alkaloids, minerals, colloids, and other extremely dilute solutions, which previously could only be dealt with physically by measuring their electric conductivity.

The Water Interferometer is, in fact, a convenient and accurate water analyzer and as such admirably adapted for the permanent control of drinking water, river water, and the waste waters discharged by factories, and should prove valuable to water boards, public analysts, and others whose duty it is to test water systematically; for use in oceanographic laboratories and in connection with marine expeditions, and last but not least, for the equipment of laboratories appointed for researches in physics, physical chemistry, and mineralogical chemistry.

Water Interferometer No. 45961 is identical in appearance with Portable Gas Interferometer No. 45945

No. 45948—Portable Gas Interferometer with hood

No. 45945—Portable Gas Interferometer without hood

45920. Laboratory Interferometer, Zeiss, with standard 10 cm wide, 20 cm high and 200 cm long. The gas to be examined and the standard gas are each contained in a chamber 100 cm long with a cross section of 1 sq. cm, making the capacity of each chamber 100 cc. In a gas chamber having a length of 100 cm the limit of error is similar to that obtainable by the exact method of analysis of gases in contact with mercury. Thus the percentage of carbon dioxide (CO<sub>2</sub>) or methane (firedamp CH<sub>4</sub>) can be ascertained with a degree of accuracy within 0.01 to 0.02%. With detachable gas chamber 100 cm long and cover, but without lamp.

No. 45980

45980. Refractometer, Fery, Hilger, a direct reading refractometer for taking the refractive index for sodium light of oils, solutions of acids, mixtures of glycerine, alcohols, etc., with water, sugar solutions, and other liquids of interest to the industrial chemist. This instrument possesses the following advantages:—

It reads direct the refractive index of any transparent liquid with a uniform accuracy of nearly 0.0001, from 1.3300 to 1.6726. The glass with which the liquid comes into contact is a crown glass, which resists to an exceptional degree the action of chemical reagents. The temperature control is extremely simple and effective and forms an integral part of the apparatus. The manipulation of the apparatus is extremely simple and convenient.

46000.	Respirator, Automatic, for protection of throat and lungs in laboratories, factories, mines, etc., where the atmosphere is filled with dust and poisonous gases.	2.00
46004.	Respirator, Automatic, of aluminum with pneumatic cushion which fits any face closely but without discomfort.	2.50
46008.	Retorts, Copper, for making oxygen; of heavy polished copper with iron clamp and brass delivery tube fitting with ground joint, diameter of tube 12 mm.	
	Capacity, cc.....	250 500 1000 2000
	Each.....	3.00 3.25 3.75 4.00
46012.	Retorts, Heavy Copper, tin lined, as used in distilling apparatus No. 26548.	
	Capacity, gallons.....	$\frac{1}{2}$ 1 2 3 5
	Each.....	7.00 8.00 10.00 13.50 24.00
46016.	Retorts, Best Bohemian Glass, plain.	
	Capacity, cc.....	25 50 75 150 250 500 1000
	Each.....	.10 .13 .14 .18 .20 .25 .35
46020.	Retorts, Best Bohemian Glass, with tubulature but without glass stopper.	
	Capacity, cc.....	50 75 150 250 500 1000
	Each.....	.16 .18 .22 .25 .35 .45
46024.	Retorts, Best Bohemian Glass, with ground glass stopper.	
	Capacity, cc.....	25 50 75 150 250 500 1000 2000 4000 8000
	Each.....	.17 .19 .21 .26 .30 .45 .55 .75 1.30 1.70
46028.	Retorts, Jena Glass, plain.	
	Capacity, cc.....	50 100 250 500 1000 2000 3000 4000 8000
	Each.....	.11 .15 .21 .34 .45 .68 .93 1.00 2.10
46032.	Retorts, Jena Glass, with tubulature but without glass stopper.	
	Capacity, cc.....	50 100 250 500 1000 2000 3000 4000 8000
	Each.....	.19 .21 .32 .50 .63 .95 1.30 1.45 2.90
46036.	Retorts, Jena Glass, with tubulature and glass stopper.	
	Capacity, cc.....	50 100 250 500 1000 2000 3000 4000 8000 10000 15000
	Each.....	.40 .42 .55 .80 1.00 1.35 1.73 1.95 3.50 4.35 6.55
46040.	Retorts, Royal Berlin Porcelain, with tubulature and ground in stopper.	
	Capacity, cc.....	40 140
	Each.....	1.95 2.85
46044.	Retort, Royal Berlin Porcelain, with removable top, 470 cc capacity.	3.60
46048.	Retort, Infusible Bohemian Glass, with two bulbs, as used for making oxygen.	
	Capacity, cc.....	100 250
	Each.....	.45 .55

46052.	Retorts, Iron, for distilling mercury, etc., with removable cover fastened by screw clamp and with delivery tube ground into cover.				
	Capacity, cc.....	250	500	1000	2000
	Each.....	2.25	2.50	3.00	4.50
46056.	Rings, Concentric, Copper tinned inside, for water baths, etc., with cover.				
	Number in set.....	3	4	5	6
	Outside diameter of set, inches.....	4 $\frac{1}{2}$	5 $\frac{1}{2}$	6 $\frac{1}{2}$	8 $\frac{1}{2}$
	Per set.....	.60	.80	1.00	1.25
46060.	Rings, Concentric, Royal Berlin Porcelain.				
	Number in set.....	3	4	5	9
	Outside diameter of set, mm.....	74	94	115	197
	Per set.....	.80	1.20	1.65	4.05
46064.	Rings, Concentric, of japanned cast iron, with screw clamp on largest ring for attaching to upright support; outside diameter of largest ring 8 inches, with four rings in set. Per set.....				.75
46068.	Rings, Support, of japanned cast iron, with screw clamp with brass screw. Distance from center of support to center of rings 2 $\frac{1}{2}$ inches. Suitable for use on upright supports with tripod base and supports with rectangular base in the smaller sizes. When used on the same support rings will be concentric. Outside diameter, inches.....				2 $\frac{1}{2}$ 3 $\frac{1}{2}$
	Each.....			.15	.17
46072.	Rings, Support, similar to above but with distance from center of support to center of rings 4 $\frac{1}{2}$ inches. Suitable for use on supports with rectangular base in the three larger sizes. When used on the same support rings are concentric.				
	Outside diameter, inches.....	2 $\frac{1}{2}$	3 $\frac{1}{2}$	4 $\frac{1}{2}$	6 $\frac{1}{2}$
	Each.....	.15	.17	.20	.25
46076.	Rings, Support, of japanned iron, with straight extension bar 8 inches long. Distance from end of shank to center of rings 9 $\frac{1}{2}$ inches. A clamp holder such as No. 24518 is necessary when these rings are to be attached to an upright support.				
	Outside diameter, inches.....	2 $\frac{1}{2}$	3 $\frac{1}{2}$	4 $\frac{1}{2}$	6 $\frac{1}{2}$
	Each.....	.10	.12	.15	.20
46080.	Rings, Support, of brass with glazed porcelain inset, with screw clamp.				
	Outside diameter, mm.....		60	80	100
	Each.....		.45	.50	.55
46084.	Rings, Support, of brass, with wooden inset, with screw clamp.				
	Outside diameter, mm.....		60	80	100
	Each.....		.45	.50	.55
46088.	Roasting Dishes, Battersea.				
	Diameter, inches.....	3	4	5	6
	Per dozen.....	.80	.90	1.10	2.10
46092.	Rubber Bands, of pure gum, in boxes of seven assorted sizes. Per box.....				1.00
46096.	Rubber Bulb, of pure, acid-cured red rubber, as required in opsonic and serological work; about 2 cc capacity, as used in Dr. Wright's laboratories.....				.15
46100.	Rubber Bulbs, of pure black gum, for dropping pipettes, medicine droppers, etc.; superior quality.				
	Capacity, cc (approximate).....	2	3		5
	Per dozen.....	.45	.50		.60
	Per gross.....	4.80	5.50		6.75
46104.	Rubber Bulbs, of red non-blooming rubber, stout walled, for pipettes.				
	Capacity, ounces.....	1	1	1	1
	Length, inches.....	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	2 $\frac{1}{2}$
	Diameter, inches.....	1	1 $\frac{1}{4}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$
	Each.....	.10	.12		.15

46108.	Rubber Bulbs, of white composition rubber, large size for large pipettes, etc.										
	Length, inches.....	3½		3 <sup>2</sup> / <sub>5</sub>						4	
	Diameter, inches.....	1½		1 <sup>1</sup> / <sub>4</sub>						1¾	
	Each.....	.20		.25						.30	
46112.	Rubber Bulb, with single valve, without extension tube, of white rubber 2½ in. long by 2 in. diam.....	.25									
46116.	Rubber Bulb, with two valves, of white rubber, with 5 inches of tubing.....	.30									
46120.	“ “ of pure black gum, with long flexible tube, for use with gas analysis apparatus.....	.60									
46124.	“ “ with two valves, of hard rubber, giving the exhaust and pressure, i. e., the first compression of the bulb releases blast from one end, after which suction is produced from the opposite end when the bulb resumes its usual shape. As used in gas analysis, etc.....	.50									
46128.	Rubber Bulb, double, of pure black gum, with heavy silk net, for constant pressure.....	2.00									
46132.	“ “ of black acid-cured rubber, with double valve set in bone fittings.....	2.50									
46136.	Rubber Caps, for covering tops of test tubes, cylinders, etc., with rolled edges										
	Diameter, inches.....	<sup>1</sup> / <sub>2</sub>	<sup>3</sup> / <sub>8</sub>	<sup>1</sup> / <sub>4</sub>	<sup>3</sup> / <sub>16</sub>	1	1¼	1½	1¾	2	3
	Per dozen.....	.15	.50	.52	.55	.60	.70	.85	.95	1.10	1.95
	Per gross.....	4.75	5.00	5.25	5.50	5.75	7.00	8.50	9.75	11.00	19.50
46140.	Rubber Finger Coats, of pure gum, heavy weight. Size.....				Small	Medium		Large		Thumb	
	Per dozen.....			.75	.75			.75		.75	
46144.	Rubber Finger Coats, of thinnest rubber tissue, for surgical use.										
	Size.....				Small	Medium		Large		Thumb	
	Per dozen.....		.50	.50				.50		.50	

46148.	Rubber Gloves, of pure gum, chocolate color, medium weight. Sizes 6 to 10. Please specify size in ordering. No. 8 or No. 9 is required for normal male hand. Per pair.....	1.75
46152.	Rubber Gloves, of thinnest pure gum tissue, smooth finish, as used by surgeons. Sizes 6 to 10. Please specify size in ordering. Per pair.....	1.35
46156.	Rubber Gloves, of heavy white rubber, so-called "acid gloves." Gloves measure 8 $\frac{1}{2}$ inches from tip of thumb to end of gauntlet. Sizes 8, 9 and 10. Per pair.....	3.00
46160.	Rubber Gloves, of medium weight black rubber, with thin cotton lining and widely used in leading hospitals and laboratories for post mortem work, handling of pathological material, etc., with gauntlet. Sizes 6 to 10. Per pair.....	2.50
46164.	Rubber Policemen, for washing down precipitates. narrow shape, with glass rod. Per dozen.....	1.00
46168.	Rubber Policemen, wing shape, with glass rod. Per dozen.....	1.00
46172.	" " new form, with glass rod. Per dozen.....	1.50
46176.	" " with hard rubber handle and soft, cone shaped tip. Each.....	.25

No. 46188—Exact Sizes

**46180. Rubber Stoppers, A. H. T. Co. Special Quality**, made of selected stock containing a large per cent or pure Para gum and distinctly superior to the stoppers ordinarily sold as pure gum. Each stopper bears our trade mark. They are carried in stock as solid, one hole or two hole, which specification must be given with order. When no specification is given solid stoppers are sent. Exact size of each number of stopper is shown in the diagram.

Number.....	00	0	1	2	3	4	5	6

**Note**—We furnish the ordinary pure gum stopper of the rubber trade on special order only at price very much lower than that charged for our special quality.

**46192. Rubber Stoppers**, for use with the official Brown Duvel Moisture Tester in stoppered glass and copper flasks. Made of a special composition to withstand high temperatures. See Bulletin 56 of the U. S. Bureau of Plant Industry. Size No. 5, one hole. **Per dozen**..... **1.25**

No. 46200

**46196. Rubber Tissue**, or dental dam, per oz..... **.35**

**46200. Rubber Tubing, Thick Wall**, of pure black unvulcanized gum. This tubing is the best imported quality without any bloom and, for many purposes, is the best tubing made. For convenience and economy we have it put up in the European factory in neat circular boxes containing 10 ft. and 25 ft. lengths. Customers are encouraged to use these original packages as far as possible. On large quantities taken at one time we quote on application a price per pound somewhat lower than the price per foot.

Inside diameter, mm.....	3	4	5	6	8	9	12	15	18	25
Thickness of wall, mm.....	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2

46216. Rubber Tubing, Thin Wall, same as No. 46212.

Inside diameter, mm.....	11	3	4	5	6	8	9	12
Thickness of wall, mm.....	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	1	1 $\frac{1}{2}$	1 $\frac{1}{2}$	2
Per foot in less than original lengths.....	.06	.06	.10	.12	.15	.18	.26	.38
Per foot in 10 or 25 ft. lengths.....	.05	.05	.08	.10	.13	.16	.22	.32

No. 46228

No. 46224

No. 46220

46220. Rubber Tubing, Thick Wall, Hand Made, Cloth Wrapped. This is an extra fine quality of flexible tubing, guaranteed not to split and of great endurance when exposed to laboratory fumes. It is not regularly to be had in the rubber trade and is made specially for us and bears our trademark at frequent intervals. The  $\frac{1}{2}$  x  $\frac{1}{16}$  inch is the standard size for Bunsen burner connections.

Inside diameter, inches.....	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4	6
Thickness of wall, inches.....	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4
Per foot in less than original length.....	.06	.10	.12	.16	.20	.25	.30	.34	.50	
Per foot in original 12 ft. lengths.....	.04	.08	.10	.13	.15	.20	.24	.26	.40	

46224. Rubber Tubing, Thin Wall, Hand Made, Cloth Wrapped; same quality as above but with thinner wall. The  $\frac{1}{2}$  x  $\frac{1}{16}$  inch size is that mostly used for Bunsen burner connections.

Inside diameter, inches.....	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4	6
Thickness of wall, inches.....	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4
Per foot in less than original lengths.....	.05	.07	.10	.12	.15	.20	.24	.26	.40	
Per foot in original 12 ft. lengths.....	.04	.05	.08	.10	.13	.15	.20	.24	.26	

46228. Rubber Tubing, Pressure, Black, specially selected for use on Nitrometers. All our Nitrometers when ordered complete are fitted with this special tubing. Inside diameter  $\frac{1}{8}$  inch with  $\frac{1}{16}$  inch wall. Per foot.....

No. 46232

46232. Rubber Tubing, Pressure, of black semi-pure gum, very rigid to withstand heavy pressures. Recommended for use with filter pumps and similar connections.

Inside diameter, inches.....	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4	6
Thickness of wall, inches.....	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{2}$	2	3	4
Per foot.....	.20	.26	.36	.50	.85

46236. Rubber Tubing, for Gooch Crucibles, so-called "band" tubing, very elastic. The inside diameter given is when measured in cylindrical shape, i. e., in position as used on crucible, and outside diameter is when measured flat.

Inside diameter, inches.....	$\frac{3}{4}$	1	$1\frac{1}{2}$	$1\frac{3}{4}$
Outside diameter, inches.....	1	$1\frac{1}{4}$	$1\frac{1}{2}$	$1\frac{3}{4}$

Per foot..... .20 .25 .30 .38

46240. Rubber Tubing, Composition, Machine Made. This tubing is very inferior to our hand made, cloth wrapped tubing but is in some demand in laboratories and we carry in stock one size suitable for burner connections, etc., other sizes are furnished on order at lowest market price.

Inside diameter  $\frac{1}{4}$  inch by  $\frac{1}{8}$  inch wall. Per foot..... .05

46244. Rubber Tubing, Pressure, with canvas insertion moulded in the rubber; for very heavy vacuum connections.

Inside diameter, inches.....	$\frac{3}{16}$	$\frac{1}{4}$	$\frac{5}{16}$	$\frac{3}{4}$
Thickness of wall, inches.....	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$

Per foot..... .30 .40 .60 1.00

46248. Rubber Tubing Stretcher, for increasing bore of tubing for conveniently slipping over connection tubes, etc..... 1.00

46252. Rubber Viscosimeter, Frank, as used in the rubber industry and as adopted as standard by the International Rubber Testing Committee. See *Gummitzeitung* Nr. 27, 1911, and the *India Rubber Journal*, Vol. XLI, April, 1911. In wooden case, with thermometer, test solution and author's certificate of accuracy.

Duty Free..... 17.50 Duty Paid..... 25.00

46256. Rupert Drops, per ten..... .30

46260. Sampler, Jones, for convenient, rapid and uniform sampling of ores, cement, etc.; consisting of a hopper, scoop, 4 sampling pans and brush. All parts may be readily cleaned.

Size, inches.....	$4 \times 4$	$6 \times 6$	$8 \times 10$
Trays, inches.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Each.....	10.00	12.00	18.00

46264. Sampler, with Scoop, 6 inches square with divisions  $\frac{1}{2}$  inch wide..... 2.00

46268. Sand Baths, deep form, of sheet iron.

Diameter, inches.....	3	4	5	6	7	8	10
Each.....	.10	.12	.15	.20	.30	.40	.80

46272. Sand Baths, shallow form, of sheet iron.

Diameter, inches.....	2	3	4	5	6	7	8	10
Each.....	.08	.10	.12	.15	.18	.20	.30	.45

46276. Sand Baths, of wrought iron, with burner to heat entire surface; adjustable to height.

Size, cm.....	$25 \times 15$	$40 \times 20$	$60 \times 45$
Each.....	7.50	8.50	14.00

46280. Sand Baths, or Hot Plates, of iron, without burner.

Size, inches.....	$6 \times 8$	$8 \times 10$	$10 \times 12$
Each.....	1.50	2.00	2.50

46360. **Selenium Cell**, of new construction and great sensibility. These cells are mounted air-tight so that it is unnecessary to enclose them in exhausted vessels. The light of a match will reduce the resistance which the cell has in the dark by from 10% to 20%. The diameters given are for the sensitive surface and the cells are supplied in ebonite mount with terminals.

46392. **Shaking Apparatus in Combination with Low Speed Centrifuge.** As a shaking device this apparatus is furnished with two heads, one size taking 2-50 cc bottles or two test tubes up to 5 inches in length and with which a maximum speed of 1000 r. p. m. is obtained. The larger head takes 2-500 cc bottles at a maximum speed of 300 r. p. m. These heads may be used interchangeably with the 2-Erlenmeyer Flask head. Price is the same for the Shaker with either the 2-50 cc bottle or 2-500 cc bottle head, but does not include the 2-Erlenmeyer flask centrifuge head.

No. 46461

46460. Shaking Apparatus, Camp, as above but with wooden disc and clamps to accommodate 12 volumetric flasks 100 cc, for sugar analysis, etc. .... 35.00
46461. Shaking Apparatus, Freas Electric, specially designed for shaking soil samples at constant temperature; it can, however, be successfully employed for other purposes requiring constant temperature below 175° C. Consisting of a rectangular oven built of asbestos wood, inside dimensions 14 inches high, 14 inches deep, 30 inches wide; equipped with a shaft to which is fitted six double adjustable clamps, easily removable for holding 12 wide mouth bottles, 12 ounce capacity. The shaft is rotated by means of an electric motor fitted as shown in the illustration. The shaft can easily be removed to permit of the chamber being used as an oven. The heating is accomplished by a flat resistance wire wound heating plate, while the devices for maintaining constant temperature and quickly setting for any desired temperature are identical with those employed in the Freas' Electric Ovens. Mounted on heavy iron stand as shown in illustration, complete with motor and 12 glass stoppered bottles, 350 cc capacity. .... 175.00

No. 46572

No. 46576

46572. Sieve Shaking Machine, for motor driving. The horizontal motion takes place on ball bearings operating in oil and the machine is noiseless in operation. With an enamelled sieve of 200 mm diameter with 6 inserts same diameter. Other sieves of same diameter in varying numbers may be used on this machine, being conveniently held in place by the strap over the top as shown in illustration. 25.00
46576. Sieve Shaker, Braun, for 8 inch standard sieves. This apparatus will be found a great time and labor saver in grading samples of sand, cement, ores and other materials. In repeated tests, using the same sample, identical results are obtained, which guarantees the reliability of this machine. From one to eight sieves of 8 inch diameter can be placed in the machine at one time. These sieves are mounted in a brass frame supported by a chain. The supporting arch is adjustable so that when a small number of sieves are placed in the hanger it can be raised to the proper height, thus allowing the surrounding frame to strike the sieves. A special hanger allows the sieves to rotate slowly while being shaken. This rotation is caused by the peculiar shape of the surrounding frame which strikes the sieve on all sides, securing a complete separation of the various mesh products. The interior of the surrounding frame is lined with leather, which protects the sieves. It is very light running and requires little effort to operate. In a test run, using a 10 gram sample of sand, it requires 7 minutes to obtain an accurate separation using 8 sieves from 10 to 200 mesh. For hand operation, without sieves. 50.00
46580. Sieve Shaker, as above, but with electric motor drive, for either alternating current of 110 volts, 60 cycles, or direct current of 110 volts. Current must be specified in ordering. Without sieves. 90.00

No. 46580

No. 46584

46584. Sieve Shaking Apparatus, for use with either hand or power, on wooden base 11 x 20 inches, height over all 17 inches. Will take conveniently from one to four sieves up to 6 inches in diameter. 30.00

No. 46588

No. 46592

46588. Sieve Shaker, Per Se, taking standard 8 inch sieves, for power or hand driving; as used in sieving rice, drugs, emery, corundum, fire clay, litharge, silica, sulphur, cement, phosphates, pigments, sugar, gunpowder, guano, whiting, salt, starch, flour, linseed, cottonseed, boneblack, etc. The mechanical motion secured in these shakers is an eccentric, semi-rotary motion with a vertical drop. The sharp vertical drop or jog has been found very necessary in order to free the meshes from those particles which would ordinarily remain in the apertures of the cloth and to which in a great measure the efficiency of the device may be ascribed. These movements simulate very closely those obtained in hand manipulation of individual screens and the results secured show very close agreement between hand and the mechanical method. The machines are mounted on solid base with firm clamping device for the sieves. Without sieves..... 90.00
46592. Sieve Shaker, Per Se, as above but with directly connected direct current electric motor. Without sieves..... 150.00

No. 46604

- 46600. Silica Rod, Opaque Fused Silica**, useful for stirring and pouring at high temperatures, particularly in the case of high melting metals and alloys which do not form basic oxides, also for the construction of delicate physical apparatus where material is required with extremely small coefficient of expansion. Furnished in lengths up to 6 ft.

- 46608. Slide Rule, Nestler**, for chemical calculations; of mahogany, with scale on white celluloid; providing for all calculations as met with in chemical practice. Complete in case with instructions for use..... **4.50**

No. 46612. Front

No. 46612. Back

- 46612. Slide Rule, Duplex**, designed to adapt the logarithmic and cologarithmic scales to the rapid solution of the problems encountered by the chemist. The symbols on the rule, being arranged in the order of their molecular weight, are easily found, while the application of a very simple rule enables the chemist to locate other symbols of less frequent occurrence. The rule carries 138 chemical symbols which include the common acids, bases, salts, oxides, and elements. As each symbol has its individual position corresponding to the logarithm of its molecular weight, the number of permutations and combinations possible covers the requirements of almost any problem. By using the logarithmic and cologarithmic scales in conjunction with the chemical gauge points, problems in Stoichiometry, such as gravimetric analysis, volumetric analysis, equivalents, percentage composition, conversion factors, volume of gas from a given weight of substance at different temperatures and pressures, and many other analogous problems are readily solved. The rule is accompanied by a manual giving the theory of its use together with numerous examples of both an arithmetical and chemical nature. Length 10 inches, engine divided, divisions on white facings, glass indicator, in morocco covered case, with directions..... **8.00**

No. 46820

No. 46816

No. 46816 with Test Tube Holder

No. 46832

No. 46824

Optical Plan of No. 46824

46816. Spectroscope, Vogel, Direct Vision, Schmidt & Haensch, total length 170 mm. With comparison prism, illuminating mirror, holder for small test tubes and six extra test tubes. In case.  
 Duty Free..... 13.65 Stock..... 18.20
46820. Stand for Direct Vision Spectroscopes, especially No. 46816, with absorption trough..... 6.00
46824. Spectroscope, Martens, Direct Vision, Schmidt & Haensch, with comparison prism and wave length scale. A rotating disc with lenses of different foci after Martens permits the accurate adjustment of the telescope for any eye. The diagram above illustrates the operation of this spectroscope when used without illuminating device which is only necessary with very weak spectra and which may be operated by three cells of dry battery. In case.  
 Duty Free..... 28.20 Duty Paid..... 37.60
46828. Spectroscope, same as above but with the addition of Beckmann electric lighting arrangement with special cap for comparison prism, without accumulator.  
 Duty Free..... 41.70 Duty Paid..... 55.60
46832. Stand for Direct Vision Spectroscopes, particularly designed for Martens Wave Length Spectroscopes No. 46824 consisting of support, mirror glass, stage, clamp for spectroscope, absorption trough and absorption tube, with polished wooden case taking both spectroscope and support.  
 Duty Free..... 21.45 Duty Paid..... 28.60

No. 46836

No. 46840

46836. Spectroscope, Kirchhoff-Bunsen, Schmidt & Haensch, Model II, with enclosed prism case, rack and pinion adjustment for the telescope, 15 mm objective, flint prism of dispersion  $C - F = 1^{\circ} 56'$  in mounting, unsymmetrical slit with micrometer head reading to  $\frac{1}{10}$  mm, Ramsden ocular 28 mm focus, photographic scale with orienting device "S," wavelength scale, mirror for illuminating slit, mirror for illuminating slit, adjustable table support and glass cell as shown in illustration. Duty Free..... 73.95 Stock..... 98.65
46840. Spectroscope, Kirchhoff-Bunsen, Schmidt & Haensch Model III, with unsymmetrical slit and 24 mm objectives. The micrometer adjustment is furnished with a dispersion curve giving the wave length for different readings. With two Ramsden oculars of 28 and 11 mm focus, with cross hairs; with flint glass prism of Jena glass No. 0.102  $N_D = 1.649$ , dispersion  $C - F = 1^{\circ} 65'$ , face 28 x 31 mm; photographic scale and mirror for illuminating slit. This instrument may be used for a great variety of work in connection with studies in both emissions and absorption spectra, spectrophotometry, etc., and with the camera listed below. Duty Free..... 121.05 Duty Paid..... 161.50

No. 46844

No. 46856

46844. Spectroscope, Hoffman, Direct Vision, Schmidt & Haensch, large model, with micrometer adjustment for telescope tube permitting same to move over the entire spectrum, with direct vision prism of dispersion  $C - F = 5^{\circ} 30'$ , telescope objective of 200 mm focus, adjustable slit with comparison prism, one ocular of 28 mm focus, with cross hairs, illuminated by prism inside, and one ocular of 11 mm focus with pointer scale, telescope with rotating scale and mirror for illumination of same. Suitable for general chemical analyses, wavelength determinations and for the securing of light of a given wavelength for other optical purposes as in spectrophotometry, etc. Duty Free..... 119.75 Duty Paid..... 160.00
46848. Rutherford Prism, with mounting, dispersion  $C - F = 3^{\circ} 26'$ . For use with Nos. 46840 and 46844. Duty Free..... 15.00 Duty Paid..... 20.00
46852. Wavelength Scale for use with Rutherford prism. For use with Nos. 46840 and 46844. Duty Free..... 9.60 Duty Paid..... 12.80
46856. Photographic Camera for 6 x 9 cm plates, with achromatic objective of 260 mm, camera tube and plate holder for photography of visible spectra only but can be adapted with quartz lens, uranium glass plate, etc., at an extra charge, for the ultra violet. For use with Nos. 46840 and 46844. Duty Free..... 86.25 Duty Paid..... 115.00

No. 46860

46860.	<b>Wavelength Spectrometer, Hilger Constant Deviation Type.</b> This instrument, since first introduced in 1904, has been found useful for a great variety of purposes. The outfits here listed are those recommended for general spectrum analysis, spectrophotometry, (in combination with Nutting photometer) and quantitative estimation of colored salts, dyes and organic substances possessing suitable absorption bands when in solution. Accessories for the infra-red and spectrum observations of Zeeman effect are also supplied on special order and are fully described in the Hilger catalogue which will be sent upon application. The prism is of the "constant deviation" type. The telescope and collimator are both rigidly fixed, since to pass through the spectrum it is only necessary to rotate the prism; and as a result a construction is arrived at which is at once extremely convenient and mechanically sound. The table on which the prism stands is rotated by means of a fine steel screw, the point of which pushes against a projecting arm on the prism table. To the screw is fixed a drum on which the wavelengths of the line under observation are read off direct as indicated by the index which runs in a helical slot. In the most recent instruments this index is on the side of the drum towards the eye; so that the wavelengths of lines can be read off without quitting the eyepiece. The point of the micrometer screw is of hardened steel, and is permanently fixed before the screw thread is cut, to avoid the risk of periodic errors, the point forming one of the centers while the screw thread is being cut. This hardened steel point presses against a steel plug in the above mentioned projecting arm of the prism table, itself flint-hard and optically polished. The telescope and collimator are both rigidly fixed to the cast-iron base, and the whole is screwed to a strong cast-iron tripod. The object glasses of both telescope and collimator are of 11½ inches (285 mm) focal length, and 1½ inches (31½ mm) clear aperture. The focussing of the telescope is obtained by the milled ring, which can be seen in the figure on the body of the telescope. By the turning of this ring the object glass is made to move by a carefully protected helical mechanism, the eyepiece remaining always fixed. By this means a more accurate focussing adjustment is obtained, without the liability to a sideways shift of the lines due to the focussing, which it is impossible to entirely avoid in the older form. With prism of 1.65 refractive index for D, accurately calibrated from 385μ to 800μ.....	Duty Free 135.00	Duty Paid 185.00
46864.	<b>Wavelength Spectrometer, Hilger,</b> exactly as above, but with denser prism, i.e. 1.74 refractive index for D, and correspondingly increased accuracy of calibration, being from 390μ to 800μ.....	149.85	205.35
46868.	<b>Universal Base</b> attached to either of above. For detailed description of universal base see No. 46908.....	10.00	13.70
46872.	<b>Protecting Cover</b> for prism table.....	2.84	3.90
46874.	<b>Levelling Screws</b> .....	5.00	6.85
46876.	<b>Case</b> , with lock and key, for either of above.....	7.70	10.55
46880.	<b>Extra High-Power Eyepiece</b> with its own zero adjusting cross-hairs.....	59.40	81.40
46884.	<b>Shutter Eyepiece</b> with lateral adjustment to bright pointer.....	21.60	29.60
46888.	<b>Slide</b> with light filters to the shutter eyepiece for giving the pointer any desired color, by means of which an increase of accuracy and comfort in reading can be secured, especially in the violet part of the spectrum.....	6.75	9.25

**Note**—This eyepiece has two shutters which can be shifted from either side in the focal plane so as to cover any desired part of the field, thereby observing any bright lines which, by their proximity prevent the observation of feebler lines. The metal pointer, the extremity of which is ground exceedingly fine and polished bright with the greatest care, is illuminated from above by a mirror. This bright pointer is adjustable laterally by the two milled head screws below, so that one can always return to the standard by setting the bright pointer on a reference line.

No. 46860 Hilger Wavelength Spectrometer with Camera No. 46892 Attached

46892. Camera, with 21-inch focus lens, tilting adjustment for accurately focussing the whole spectrum, and shutter for exposure.

Hilger Wavelength Spectrometer with Universal Base and Nutting Polarisation Photometer Attachment in position and Stand for two parallel beams of light

46908. Wavelength Spectrometer, Hilger Constant Deviation Type, with Universal Base, in which the base plate and tripod are of the form shown, the tripod being heavier and larger than in the ordinary Wavelength Spectrometer and the base-plate having an extended arm. The base-plate is drilled with all necessary holes for the addition of the Nutting Photometer. The Universal Base also provides for the attachment of the complete accessories for high resolving power (Michelson echelon, Lummer-Gehrcke plate, and Fabry-Perot etalon). With prism of 1.65 refractive index for D, and Universal Base.

46916. Nutting Polarisation Photometer Attachment, particularly designed for attachment to the Hilger Wavelength Spectrometer with Universal Base, as above listed. The combination results in a Spectrophotometer for the visible spectrum accurate as regards wavelength and photometric measurements. The circle is divided both in densities and degrees. The price includes an arrangement on separate stand for producing two parallel beams of light, by which means, together with an adjustment on the photometer itself, the correct conditions of illumination may be secured with two columns of liquid of any desired length.

No. 46928

46928. Spectroscope, Krüss Universal, for quantitative and qualitative analysis, spectro-photometry, etc. Large model with flint glass prism of  $60^\circ$  and triple Rutherford prism, providing a great range of dispersion. Micrometer adjustment for observation telescope, etc. Equipped for qualitative analysis with simple micrometer slit, with divided drum and platinum edges, comparison prism and lamp for illumination of scale. Equipped for quantitative analysis and photometry with micrometer double slit, with two divided drums after Vierordt, adjustable eye-piece, absorption vessel with parallel walls, Schultz's cell, micrometer support and observation lamp. With two unsymmetrical slits.

Duty Free..... 157.50

Duty Paid..... 210.00

46932. Spectroscope, Krüss Universal, exactly same as above but with two symmetrical slits

Duty Free..... 190.50

Duty Paid..... 254.00

No. 46936

No. 46944

46936. Spectrograph, Fuess, Gehrke and Reichenheim, as used at the Physikalisch-Technische Reichsanstalt. With optical system of quartz for investigations of the ultra-violet. For photographic plates  $6\frac{1}{2} \times 9$  cm. A small compact instrument which has been supplied to many leading chemical and physical laboratories in Europe and America. Complete with extra large Cornu prism.

Duty Free..... 142.50

Duty Paid..... 190.00

46940. Spectrograph, Fuess, identical with above but with glass lenses and two dense flint glass prisms  $n_D = 1.75$  for investigations of visible spectra.

Duty Free..... 120.00

Duty Paid..... 160.00

46944. Spectrograph, Hilger, for the Ultra-Violet, with optical system of Uviol glass. Recommended as an inexpensive outfit for ultra violet work, having been used very successfully for experiments in blood, absorption spectra, etc. Each instrument is sent out in complete adjustment ready for photographs to be taken. Specimen photographs sent on application. With two prisms and lenses of the most transparent ultra-violet glass, the lenses of 8 inch (203 mm) focus, the spectrum from  $300 \mu\mu$  to  $800 \mu\mu$ , about 40 mm in length. Size of plate  $4\frac{1}{2}$  by  $3\frac{1}{4}$  inches.

Duty Free..... 89.10

Duty Paid..... 122.10

No. 46948

46948. **Spectrograph, Hilger, for the Ultra-Violet, Size C**, with quartz optical system; designed to be in permanent adjustment; to give the whole spectrum from  $200\ \mu$  to  $800\ \mu$  on one plate; to give good definition over the whole spectrum on the ordinary photographic plate and to give as large an amount of light as is consistent with the above conditions, thus enabling spectrograms to be taken with relatively short exposures. The instruments are sent out completely adjusted, ready for photographs to be taken. Specimen photographs will be sent on application. With lenses of 24 inches (610 mm) focus, the instrument giving a spectrum from  $210\ \mu$  to  $800\ \mu$  of about 200 mm in length; prism 41 mm high by 65 mm length of face; size of plate  $10 \times 4$  inches; with No. 2 Slit. The dispersing system consists of one Cornu prism. There is a vertical motion by rack and pinion to the dark slide, with scale, whereby a number of exposures can be taken one below the other.

Duty Free..... 317.25

Duty Paid..... 434.75

46952. **Wavelength Scale for above Spectrograph** mounted internally in such a manner as to be brought at will in contact with the photographic plate. Illumination is provided by means of a small electric lamp, and a contact print of the wavelength scale can thus be obtained on the same plate as, and in juxtaposition to, the photograph of the spectrum. The above Quartz Spectrograph in connection with the wavelength scale is widely used for experiments in the absorption of light of complex chemical substances and in the study of molecular constitution. If desired the scales can be divided to read frequencies instead of wavelengths, the price being the same. Price applies only if ordered with Size C Spectrograph, including small battery in case with push key for illuminating lamp; the whole being attached to the Spectrograph in a convenient position for use.

Duty Free..... 70.20

Duty Paid..... 96.20

46956. **Wavelength Scale on Glass, for above Spectrograph.** These scales are photographed on glass and can be laid direct on the spectrograms to read off the wavelengths. They are prepared to suit each individual instrument and are sufficiently accurate to determine the identity of most lines.

Duty Free..... 8.10

Duty Paid..... 11.10

46960. **Metal Slides for the Plate-holder for above Spectrograph**, same being attached to the base of the instrument by a rigid metal bracket. In this construction the wooden cone and bellows of the camera are still retained, but play no part in the support of any essential portions of the apparatus.

Duty Free..... 94.50

Duty Paid..... 129.50

36964.

**Sector Photometer, Hilger, for Quantitative Spectrophotometry in the Ultra-Violet** in connection with the Hilger Ultra-Violet Spectrograph Size C. With wavelength scale by the measurements of the actual proportion of each wavelength absorbed in its passage through the substance or for some function of it, as for instance the absorption constant. The great interest which the measurement of selective absorption has assumed for the chemist will be noted from the extensive bibliography concerning the chemical significance of the absorption spectra of organic compounds and rare earths. Much of this work has been unsatisfactory because it has not been of a quantitative character. The Sector Photometer consists of a slit and a bi-prism which receives the light from the solution through the substance to be examined and the rotating sector so that two spectrum photographs are obtained in close juxtaposition, one of which is of reduced density throughout its whole length and the other—that which has passed through the material

No. 46964

under test—being more dense than the first in certain parts and less so in others, there being certain wavelengths where the density of the two is equal. Spectrum photographs and more complete description, with complete bibliography, will be sent upon application. With motor for either 110 or 220 volt circuit. Voltage must be specified in ordering.

Duty Free..... 145.80

Duty Paid..... 199.80

46968. **Tubes, with quartz ends, for solutions, length of liquid 10, 20 or 40 mm.**

Duty Free, each..... 4.05

Duty Paid, each..... 5.55

No. 46970

**SPECTROSCOPE, GRATING, ZEISS**, primarily designed for the analysis of absorption spectra but applicable at the same time to the study of emission spectra. In grating spectra the wavelength for any line of the spectrum is proportional to the corresponding angle of deflection, and this property has been made a means of dividing the head of the micrometer screw by which the telescope is moved through the spectrum in terms of wavelengths. Using none but the most perfect gratings, Zeiss have been enabled by the excellent definition of the spectra to depart from the usual division in terms of  $\mu\mu$  or millionths of a millimeter and have divided the drum into units which are ten times finer, i.e. into Angstrom units ( $1 \text{ \AA.} = 0.1 \mu\mu$ ). The Fraunhofer lines of the solar spectrum can accordingly be set accurately to within  $1-2 \text{ \AA.}$  For sharply focusing the spectrum with respect to the cross lines in the telescope the collimator is very rigidly mounted and fitted for this purpose with a milled ring. The slit, which is of the highest order of precision, moves symmetrically and can be adjusted during observations by means of a wheel and cord transmission gear. The jaws of the slit are protected from the access of dust and accidental injury by a detachable glazed cap, the latter being interchangeable with a similar cap fitted with a comparison prism. Each division of the slit drum, which has one hundred divisions, changes the width of the slit by an amount equal to  $0.01 \text{ mm.}$

When the instrument is applied to the analysis of absorption spectra the absorption bands are much more clearly defined owing to the comparatively small dispersion of the grating, which contributes greatly to the accuracy with which it can be adjusted with respect to the cross lines. This renders the instrument particularly well adapted for the spectroscopic analysis of pigments by Formánek's method. To render the cross lines clearly visible in the presence of very dark absorption bands the telescope is fitted with a convenient device for illuminating the cross lines, which entirely fulfils the purpose of the arrangement recommended by Formánek, though it differs from it in the means adopted by Zeiss.

The most suitable source of light is a Nernst lamp with exposed glower, i.e. a glower not surrounded by a heating spiral, an image of the glower in its natural size being projected upon the slit by means of a condenser lens. With this source of light the slit should as a rule be reduced to a width of  $0.02$  to  $0.03 \text{ mm.}$  An inverted incandescent gas burner supported on a stand and provided with screen is equally convenient to manipulate, though it gives a less intense light than the Nernst lamp.

Spark spectra and arc spectra are examined by projecting with the aid of a converging lens an image of the radiant upon the jaws of the slit, which for this purpose are lacquered white. Care should be taken to insure that the exit pupil of the telescope may be completely filled with light. This may be ascertained by viewing the small bright circle in front of the eyepiece with a magnifier. See F. Löwe, *Zeitschr. f. Instrumentenkunde* 1903, 23 S. 261; or J. Formánek "Untersuchung und Nachweis organischer Farbstoffe auf spektroskopischem Wege," II Auflage, Berlin 1903, or "Die qualitative Spektralanalyse anorganischer und organischer Körper" II Auflage.

**Grating Spectroscope**, as above, with transmission grating, protecting cap for the slit, comparison prism, reader for the micrometer screw and two interchangeable eyepieces of different foci, in case with lock and key.

Duty Free..... 200.00

Duty Paid..... 272.00

No. 46972

No. 46974

46972. **Monochromator, for Visible Rays, Fuess.** Convenient as a source of homogeneous light for spectrometers, refractometers, polariscopes, microscopes, goniometers, etc. Illustration shows same in position before the collimator tube of a spectrometer. With two flint prisms  $n_D = 1.67$ , and with two Ramsden oculars with cross hairs. See E. A. Wülfing, *Tschermak's Mineral u. petrogr. Mitt.*, 15, S. 74; ferner: C. Leiss, *Zeitschr. f. Instr. Kunde*, 18, S. 209; ferner: C. Leiss, *Die opt. Instr.*, S. 25, Fig. 19-21.

Duty Free 162.90

Duty Paid 217.20

46974. **Spectroscope, Autocollimation, Zeiss.** Light reaches one-half of the slit through the window at F, while a similar window on the left admits light to the other half of the slit, and thence passes through the objective O to the prism P, where it is reflected back from one of the silvered faces and in the focal plane of the objective O produces a spectrum which can be passed through the field of view of the fixed telescope by turning the screw head M. The arrangement of the two windows furnished a convenient means of comparing two spectra. Wavelengths can be accurately measured within a fraction of a  $\mu$  by reference to spectrum lines of known wavelengths, while for the identification of the various regions of the spectrum a dispersion curve is furnished with the double Rutherford prism. With double Rutherford prism and dispersion curve.

Duty Free 185.00

Duty Paid 251.60

46976. **Prism of 30°, on silvered back with metal stage, for use interchangeably with Rutherford prism.**

Duty Free 8.25

Duty Paid 11.22

No. 46980

46980. **Spectrograph with Divided Circle, Zeiss.** consisting of the Autocollimation Spectroscope above, with metal camera with arrangement for ten exposures on one plate and a base plate for the prism for automatically obtaining the minimum deviation. The objectives are inserted as far as they will go by which means the Spectrograph is focused and ready for exposure. With a 6x9 cm plate holder, but without objectives and prisms.

Duty Free 206.25 Duty Paid 280.50

46982. **Pair of Achromatic Objectives, f = 250 mm., with fittings to slide into the collimator and camera.**

Duty Free 15.00

Duty Paid 20.40

46984. **Pair of Double Quartz-Fluorite Achromatic Objectives, f = 250 mm., for use in the ultra-violet.**

Duty Free 47.50

Duty Paid 64.60

46988. **Rutherford Prism, on base plate.** Duty Free 25.00 Duty Paid 34.00

46990. **Cornu Double Prism, on base plate.** Duty Free 22.50 Duty Paid 30.60

46992. **Condenser, with quartz lens, on stand.** Duty Free 18.75 Duty Paid 25.50

No. 46994

No. 46996

46994. **Monochromatic Illuminator, for the Ultra-Violet Light and Visible Rays, Hilger**, reading from  $200\mu$  to  $700\mu$  in direct wavelengths. This instrument is particularly suitable for experiments on the photo electric effect, etc. The collimator and telescope both have symmetrical slits with divided drum heads for width adjustment of the jaws which have an effective length of 20 mm. The lenses are of 31 mm aperture and 210 mm focal length for  $\lambda = 300\mu$ . The beam of light from the collimator passes at minimum angle through a Cornu prism of quartz (height 32 mm, length of face 42 mm) and is then reflected from a plane mirror into the telescope. The prism and mirror stand on one table, which is rotated by means of a fine steel screw, the wavelength of the portion of the spectrum under observation being read off direct on a helical drum. The average accuracy of reading throughout the range is to about  $1\mu$ . The collimator and telescope are rigidly fixed to the cast-iron base.

Duty Free..... 279.18

Duty Paid..... 382.58

Note—This instrument may be converted into a spectrometer for infra-red rays by the addition of rocksalt prism, two nickel-steel concave mirrors, thermopile, etc. Price upon application.

46996. **Spectroscope, Comparison, Zeiss**, for the convenient comparison of the absorption spectra of fluids, glasses, ray filters, etc. In case with a number of lithographs of wave length scale for guidance in observations. The illustration shows the optical arrangement only, the whole being mounted on an adjustable upright support with base, for convenient manipulation.

Duty Free..... 77.50

Duty Paid..... 105.40

46998. **Spectroscope, Comparison, Zeiss**, with triple field, i.e. for the simultaneous observation of three spectra. Similar in construction to the preceding. This instrument is intended for practical color analysis in the arts, such as three color photography, three color printing and also physiological investigations on color sensations, etc. For more detailed description send for Mess 260. In case with lock and key.

Duty Free..... 93.75

Duty Paid..... 127.50

47000. **Cylindrical Absorption Cells**, for use with either of above with cover glasses, with height of fluid 1 mm, 5 mm, 10 mm and 20 mm.

Duty Free, per set..... 3.00

Duty Paid, per set..... 4.08

47002. **Absorption Cell, for variable fluid height**

Duty Free..... 8.75

Duty Paid..... 11.90

No. 47004

47004. **Hand Spectrophotometer, Nutting, Model I**, a combination of direct vision pocket spectroscope with polariscope consisting of two Nicol prisms. Dispersion of Amici prism  $C - F = \text{ca. } 5^\circ$ . See P. G. Nutting, Bulletin of U. S. Bureau of Standards, Vol. 2, No. 2, p. 317, Fig. 1 u. 2, 1906; ferner: C. Leiss, Zeitschr. f. Instr. Kunde 26, S. 307, 1906.

No. 47112

No. 47116

No. 47120

No. 47124

47108. Prism, Hollow, with faces of highly polished mirror glass and glass stopper; cemented together in an electric furnace and resistant to heat, acids and alkalis; with transparent opening through faces 25 mm in diameter. 6.00
47112. Spectrum Cells, for absorption spectra, etc., bottle form, with ground in stopper and plane parallel sides. .60
47116. Spectrum Cells, for absorption spectra, etc., largest size being suitable for lantern experiments. Inside dimensions, mm. 30 x 20 x 5 30 x 20 x 10 100 x 80 x 8 1.15 1.50 2.70
47120. Spectrum Cells, for absorption, with round opening 20 mm in diameter by 4 mm deep. 1.00
47124. " with lid cemented on and with a small ground in stopper, 40 x 40 x 10 mm. 4.00
47128. Spectroscope Prisms, Hilger, 60° Angle, accurate to within 10', with rectangular faces and with the ratio of the length of surface becoming greater in proportion to the height as the refractive index increases, thus securing a more satisfactory and effective aperture.

#### Light Flint

Refractive index for D=1.58 to 1.62 (approximately)

Length of face		Height of prism		Price	
inches	mm	inches	mm	Duty Free	Duty Paid
1 1/4	32	1	25	6.53	8.95
1 1/2	42	1 1/4	32	8.91	12.21
2	51	1 1/2	38	12.62	17.29
2 1/2	60	1 3/4	44	17.82	24.42

#### Dense Flint

Refractive index for D=1.63 to 1.65 (approximately)

Length of face		Height of prism		Price	
inches	mm	inches	mm	Duty Free	Duty Paid
1 1/2	35	1	25	8.91	12.21
1 3/4	44	1 1/4	32	10.09	13.83
2 1/4	54	1 1/2	38	14.25	19.53
2 3/4	64	1 3/4	44	19.89	27.26

47132. Spectroscope Prisms, Hilger Right-Angle, of white, clear and thoroughly annealed crown glass, with guaranteed definition and angles accurate to within 5'. Length of square cathetus surface, mm. 10 15 20 25 30 Each, Duty Free. 4.75 7.43 10.40 13.36 16.34 Each, Duty Paid. 6.51 10.18 14.25 18.32 22.40
47136. Quartz Prisms, Cornu, refracting angle of 60°, composed of two prisms of right and left rotation quartz, respectively, each of 30° angle. This improved construction results in greater optical perfection, removal of double image caused by reflection between the two inside surfaces without the necessity of any liquid between the two surfaces, a gain in light transmitted and greater convenience in handling. Height of prism. 19 mm 32 mm 42 mm Length of external faces. 25 mm 25 mm 32 mm Duty Free. 20.79 28.51 48.13 Duty Paid. 28.49 39.07 65.95
47140. Quartz Lenses, unmounted, accurately cut with the crystallographic and optical axes coincident; of the finest definition, the focal length for wavelength 400  $\mu$  being not less than ten times the diameter. Clear aperture, mm. 25.4 32 38 44 51 57 64 Duty Free. 11.88 13.37 15.44 17.82 21.98 29.70 40.10 Duty Paid. 16.28 18.32 21.16 24.42 30.12 40.70 54.40
47144. Quartz Lenses, plano-convex, second quality, suitable for condensing lenses, etc. Diameter, inches. 1 1 1/4 1 1/2 2 2 1/4 Focal length, inches. 3 3 3/4 4 5 6 Duty Free. 4.46 5.80 7.13 8.91 13.07 18.71 Duty Paid. 6.10 7.94 9.77 12.21 17.91 25.64
47148. Rocksalt, Prism, 60° length of face 32 mm, height of face 25 mm. Duty Free. 20.52 Duty Paid. 28.11
47152. Rocksalt, Lenses, with second quality surfaces, focal length for D not less than five times the diameter. Diameter. 25 mm 31 mm 38 mm 44 mm Duty Free. 5.64 6.24 7.13 8.32 Duty Paid. 7.73 8.55 9.77 11.40
- Note—First quality Lenses of Rocksalt, focal length for D not less than 1 1/4 the diameter, curves such as to give minimum spherical aberration for wavelength 10  $\mu$ , price 2 1/2 times that of above.
47156. Gratings, Replica, made from Rowland originals, each in case. Number of lines. 15,000 14,438 15,000 Size, inches. 1 1/4 x 1 1/4 1 1/4 x 1 1/4 1 1/4 x 1 1/4 Each. 6.00 5.00 11.00

No. 47160

No. 47168

No. 47172

47160. Spectrum Tubes, Plucker, with simple electrodes. Filled with either O, H, NO, CO, CO<sub>2</sub>, Cl, Cy, CH<sub>4</sub>, I or Br. Each..... 2.00
47164. Spectrum Tubes, Plucker, with simple electrodes. Filled with either Helium or Argon at  $\frac{1}{2}$  to 5 mm pressure. Each..... 5.00
47168. Spectrum Tubes, Plucker, empty, with simple electrodes and two Jena stopcocks ground absolutely tight, for filling in the laboratory with any desired gas. Each..... 3.00
47172. Spectrum Tubes, Dorn-Goetze, with square cut end of capillary, as used for observation of anode and cathode ray, with cylinder electrodes of large capacity. Particularly recommended for the investigation of rare gases. Filled with either O, H, N, NO, N<sub>2</sub>O, NO<sub>2</sub>, NH<sub>3</sub>, H<sub>2</sub>O, ordinary air CO, CO<sub>2</sub>, SO<sub>2</sub>, Br, Cl, Si Fl<sub>4</sub>, Sn Cl<sub>4</sub>, H<sub>2</sub>S, Cy, HCY, C<sub>2</sub>H<sub>2</sub>, C<sub>2</sub>H<sub>4</sub>, CH<sub>4</sub>, CS<sub>2</sub> or with solids I, G, Se, Hg or Hg<sub>2</sub>G. Duty Free, each..... 2.75 Duty Paid, each..... 4.15
47176. Spectrum Tubes, same as No. 47172 but filled with following rare gases.
- |                   | Helium | Argon at low pressure | Argon at high pressure | Neon | Krypton | Xenon |

No. 47196

No. 47200

No. 47216

47196. Spectrum Absorption Tube, Baly, consisting of two tubes with polished quartz ends, the outside tube being graduated in mm. Complete with two quartz plates and rubber tubing..... 7.50
47200. Spectrum Tube, End-on Type for experimental work, with stopcock and condenser to concentrate the beam. The spherical portion of the condenser is fitted air-tight to the ground and polished cup at the end of the vacuum tube; with glass condenser. Duty Free..... 13.52 Duty Paid..... 18.52
47204. Spectrum Tube, same as above, with quartz condenser. Duty Free..... 22.43 Duty Paid..... 30.73
47208. Spectrum Tube, Pure Fused Silica, End-on Type, for ultra-violet work, with secure mercury seals. Unfilled, with tube for exhaustion. Duty Free..... 15.60 Duty Paid..... 21.37
47212. Spectrum Tube, Pure Fused Silica, with external electrodes, which, while they do not give as brilliant a discharge as the usual form, have the advantage of absolute permanence. Unsealed, for experimental purposes, with tube for exhaust. Duty Free..... 5.35 Duty Paid..... 7.33
47216. Spectrum Tube, with ground stopper and stopcock, for Dupre's test for mercury in gun-cotton. Duty Free..... 3.38 Duty Paid..... 4.63

47220. Spectrum Tube Holder for Plucker tubes, without tubes. 6.00  
 47224. Spectrum Tube Support, Universal, with two clamps, binding post, with platinum wire, complete as per illustration but without spectrum tubes, or Bunsen burner. 8.00  
 47228. Photographic Plates, Wratten and Wainwright, very sensitive, for use in spectrographic work. These are supplied in the following grades.

Panchromatic "A," sensitive from the ultra-violet up to 6800 Å. u.  
 " " "B," rather less green sensitive than Panchromatic "A," but sensitive to about 7800 Å. u.  
 Wratten "M," of similar sensitiveness to Panchromatic "A," but of much finer grain and about one-third the speed.  
 Allochreme, evenly sensitive to about 5600 Å. u.  
 Double Instantaneous, a fast "ordinary" plate of fine grain suitable for ultra-violet work.

Grade.....	Panchromatic "A"	Panchromatic "B"	Wratten "M"	Allochreme	Double Instantaneous
Size $4\frac{1}{2} \times 3\frac{1}{4}$ inches, per doz. ....	.55	.85	.55	.55	.55

47648. **Sulphur Apparatus, Wiborgh**, for the exact colorimetric determination of sulphur in iron. Glass parts, with ring and clamp. 6.00
47652. **Standard Color Scale**, with percentage table. 10.00
47656. **Prepared linen discs** treated with cadmium, for use with the above. Per 100. 4.00
47660. **Sulphur Apparatus**, as used in oil refining, consisting of three glass parts with wooden base. 1.75
47664. **Sulphur Photometer, Parr**, for indicating the percentage of sulphur in coal, coke, petroleum, etc., by making use of a fused mass secured as a by-product in combustions with the Parr Calorimeter. The mass is dissolved in water precipitated with barium chloride and the density of the precipitate estimated by reading the depth of the liquid in the graduated tube at which the light from the flame disappears, which reading shows the percentage of sulphur. 35.00

# SUPPORTS

47668. Supports, without Fittings, with rectangular base, of japanned cast iron with copper plated rod.

- Syringe, Hitchens, for Injecting of Precise Amounts. This syringe provides a convenient method of washing out the entire dose from the syringe with a normal salt solution without the removal of bulb or syringe barrel or the assistance of another person. The glass parts are made of Jena alkali-free glass which is practically insoluble even during sterilization with the normal salt solution. See *Journal of Experimental Medicine*, Vol. VIII, No. 5, October 12, 1906.

No. 47788—5 cc in

**SYRINGE, RECORD, ORIGINAL MAKE.** Not to be confused with many imitations now on the market; with improved conical plunger to expel the last drop. When glass barrels are broken, customers are requested to return to us all the metal parts of the syringe, whereupon we will send a complete new syringe at the prices indicated under the heading "Repair Exchange" in the price list below. This is necessary because each barrel must have its piston individually ground in and because of the difficulty in the use of the special solder used in joining the glass to the metal in these syringes.

**Directions for Sterilizing Syringes of the Record Type.**

Detach piston from barrel before sterilization. Put syringe into cold water and light lamp of sterilizer. After sterilization let syringes become cold before placing them into the cold disinfectant. Do not use any other sterilizers but those with perforated trays. Record syringes should not be sterilized in any other way than by boiling them in water.

No. 47808

**SYRINGE, RECORD-BRUNEAU.** Construction the same as the regular Record Syringe, with the exception of the removable cap which is made long enough to retain the piston during sterilization, etc., thus obviating the necessity of complete withdrawal. This improvement effects a great saving in time and breakage and insures certainty of aseptic conditions. When glass barrels are broken, customers are requested to return to us all the metal parts of the Syringe, whereupon we will send a complete new Syringe at the prices indicated under the heading "Repair Exchange," in the price list below. This is necessary because each barrel must have its piston individually ground in and because of the difficulty in the use of the special solder used in joining the glass to the metal in these syringes.

No. 47824 Assembled

Nos. 47840 and 47844

No. 47824 with parts dismantled

**SYRINGE, REFORM.** The distinctive feature of this syringe is the entire absence of metallic solder of any kind. The glass barrels are ground to fit the metal parts and the syringe may be dismantled for cleaning, or the replacement of the glass barrel and immediately reassembled. As each glass barrel is individually ground to its accompanying piston, it is necessary in ordering new glass barrels to order a piston fitted to each. These are kept in stock as per price list below and glass barrel with fitted piston may be used with any Reform syringe of the same capacity.

**NOTE:**—We do not carry in stock test tubes made of commercial glass tubing because of the crystallization on the surface of this tubing which frequently takes place in laboratory use. The diameters of all test tubes are approximate outside diameters of the tubing. A considerable variation must be allowed for bore in the diameter of the tubing and, in the case of heavy wall test tubes, in the thickness of the wall, because of the unavoidable variation in drawing the tubing. Where test tubes must be furnished of an absolutely uniform diameter and thickness of wall they must be selected from our regular stock and a higher price charged. Prices given per 1000 apply only on orders of at least 1000 or more. All test tubes are neatly packed in cartons of 100 each.

**47948. Test Tubes, "Non-Corrosive," Thick Wall, Without Lip, for use as culture tubes in bacteriology.** These tubes are guaranteed not to corrode or give off alkali after repeated sterilization in the autoclave at 120°C. They are made of a superior resistance glass of great mechanical strength and will stand an unusual amount of mechanical stress without breaking. They are standard throughout the U. S. and are specified in many important bacteriological laboratories in preference to cheaper tubes. The size 150 x 16 mm is standard for most work.

The test tubes are held in place by strong spring clips making it possible to hold them at any height. For 24 test tubes; size of support 32½ cm long, 7½ cm wide and 16 cm high..... 1.00
48088. **Test Tube Support, Woithe**, similar to above but for 18 tubes so arranged that all are visible from either side of the rack, i.e., in alternating series with bottom of racks numbered..... 1.15
48092. **Test Tube Support, Woithe**, similar to above but for 96 tubes and with main support 38½ cm long by 19 cm wide by 37 cm high and with separate support carrying each series of 12 tubes quickly demountable..... 7.50

## TESTING APPARATUS FOR PAPER, YARNS, TEXTILES, RUBBER, LEATHER, ETC.

No. 48096

No. 48104

48096. **Paper Tester, Schopper**, for testing all kinds of paper as to both tearing strength in grams and as to tensile strength in both millimeters and percentage; for strips 15 x 180 mm. Stretching scale reads from 0 to 27 mm and from 0 to 15%. With single scale 0 to 30 kilos in 100 gram divisions.

Style.....	For hand power	With pulley for power driving	With hydraulic motor
Duty Free.....	120.45	174.90	150.15
Duty Paid.....	146.00	212.00	182.00

48100. **Paper Tester**, as above, with double scale, 0 to 5 kilos in 10 gram divisions and 0 to 30 kilos in 100 gram divisions.

Style.....	For hand power	With pulley for power driving	With hydraulic motor
Duty Free.....	127.05	181.50	156.75
Duty Paid.....	154.00	220.00	190.00

48104. **Cloth and Leather Tester, Schopper**, for cloths and woven textiles of all sorts, and for leather, etc. For specimens of from 100 to 400 mm in length and 50 mm in width. With stretch scale reading in both mm and percentage. Operating on the same principle as the paper and yarn testers but specially adapted for the materials above mentioned. As supplied by us to the leather testing laboratories of the U. S. Bureau of Chemistry. With two scales, from 0 to 60 kilos in 1 lbs and 0 to 100 kilos in 1/2 kilos.

Duty Free.....	270.60	Duty Paid.....	328.00
----------------	--------	----------------	--------

48108. **Cloth and Leather Tester**, as above, with two scales, from 0 to 130 kilos in 1/2 kilos and from 0 to 500 kilos in single kilos.

Duty Free.....	363.00	Duty Paid.....	440.00
----------------	--------	----------------	--------

Note—Where leather and yarns are to be tested on the same machine a special clamp is provided at small extra expense.

No. 48112

No. 48116

No. 48120

No. 48124

48112. **Thickness Gauge**, for paper testing, automatically reading from 0 to 2 mm in  $\frac{1}{16}$  mm by pointer and in  $\frac{1}{100}$  mm by vernier.

Duty Free..... 19.80

Duty Paid..... 24.00

48116. **Paper Tester, Portable, Schopper**, quick acting type, for strips 50 x 10 mm; with stretch scale reading in percentages. By means of a table the reading of the tensile strength scale is converted into kilo values up to 4 kilos, which is sufficient range for papers of ordinary strength. Price includes special strip cutter and a portable carrying case. Determinations can be made within one minute.

Duty Free..... 47.85

Duty Paid..... 58.00

Note—The above machine is furnished for light papers with a capacity of 1.5 kilos and for heavy paper with a capacity of 15 kilos at the same price.

48120. **Folding Test Machine, Schopper**, for determination of the resistance of paper against repeated foldings. Suited for paper of all kinds, i.e., printing, writing, wrapping papers, etc. As furnished by us to various departments of the U. S. Government. For papers weighing up to 150 grams per square meter.

Duty Free..... 165.00

Duty Paid..... 200.00

48124. **Yarn Tester, Schopper**, for testing the tensile strength and stretch of yarns, both plain and twisted, and threads of all kinds. With attachment for carrying cops, bobbins and spools and for testing in lengths of 200 mm. The stretching scale reads in both millimeters and percentage.

With tensile strength scale from 0 to, kilos.....	5	10	20	30	50	100
Duty Free.....	110.55	115.50	120.45	125.40	148.50	181.50
Duty Paid.....	134.00	140.00	146.00	152.00	180.00	220.00

Note—Any of the above machines can be supplied with an additional tensile strength scale of any specified range at \$6.60 duty free and \$8.00 duty paid.

No. 48128

No. 48132

No. 48136

No. 48140

48128. Rubber Testing Machine, Schopper—Dalen—Martens, for testing the elasticity and tensile strength of rubber. The test specimen is of ring shape and is rotated during the experiment, which makes possible the establishment of a numerical expression of the test. The machine is operated by water pressure and requires about 40 lbs. pressure. A recording device for automatically making a diagram of the relation of the load to elongation is provided at extra charge. Strength is indicated in both millimeters and percentage. See "The Influence of the Shape of the Test Body upon the Results of the Strength Test," Communications of the Royal Material Testing Institute of Grosslichterfelde, Vol. 4, 1909. With two scales, 0 to 50 kilos in 100 gram divisions and 0 to 100 kilos in 200 gram divisions.

| 48132. Rubber Testing Machine, as above, but with automatic recording device.            |        |                |        |
| Duty Free.....   | 664.95 | Duty Paid..... | 806.00 |
| 48136. Test Ring Cutter, for making test specimens for above machine, with three knives. |        |                |        |
| Duty Free.....   | 125.40 | Duty Paid..... | 152.00 |

48140. Paper Strip Cutter, for cutting strips for testing of the standard width of 15 mm and for lengths up to 31 cm.  
 Duty Free..... 11.55      Duty Paid..... 14.00

Nos. 48141-60

No. 48168

**OVEN, CONDITIONING, SCHOPPER**, for the determination of moisture in silk, wool, cotton, wood pulp, cellulose, rags, etc. The balances may be used separately from the oven or in position on top of the oven, permitting the weighing to be made while the drying process continues, thus avoiding the absorption of moisture due to the removal of the specimen as necessary in older forms. These new models are very quick in operation because of the large amount of warm air supplied. The ovens are provided with chimney to carry off the products of combustion and do not unduly heat up the room in which they are operated. Size I takes about 200 grams of loose material such as unspun cotton or wool and about 500 grams of yarn, or about 1 kilo of cellulose or wet wood pulp. Size II has a capacity for about twice the amounts given for Size I. Gas, steam or electric heating is recommended in all cases where they are possible although the benzene and gasoline oil heaters may be satisfactorily operated where the other sources of heat are unavailable.

		Size I	Size II
48144.	Conditioning Oven, as above, for gas heating		
	Duty Free.....	132.00	214.50
	Duty Paid.....	160.00	260.00
48148.	Extra for Automatic Temperature Regulator		
	Duty Free.....	23.10	29.70
	Duty Paid.....	28.00	36.00
48152.	Extra for Gas Pressure Manometer		
	Duty Free.....	4.95	4.95
	Duty Paid.....	6.00	6.00
48156.	Conditioning Oven, as above, for benzene heating		
	Duty Free.....	138.60	224.40

No. 48172

No. 48176

No. 48180

48172. **Conditioning Oven, Emerson**, for the determination of the moisture content in textile materials, consisting of an electrically heated oven automatically maintained at the proper temperature by a thermostat. Arrangement is made within the oven for supporting four removable wire baskets or containers into which is placed the material to be conditioned. Balances are provided for weighing the material before and after conditioning, the latter weighing being made in the oven. A motor driven fan produces an artificial circulation of heated air through the oven and removes the moist atmosphere, thereby greatly reducing the time for testing. The apparatus is mounted on a wooden base and occupies a floor space of  $2\frac{1}{2} \times 4$  ft., with a total height of about 6 ft. The heating device operates on either alternating or direct current but voltage must be stated in ordering..... **350.00**
48176. **Balance, Torsion**, for determining the exact weight in ounces or grams of a running yard or meter of cloth of any width without calculation or the use of weights. A two inch square sample is cut by means of a special die and the scale brought to balance by means of a slide weight. The beam is so graduated that either  $\frac{1}{4}$  oz. or 5 grams can be read..... **35.00**  
**Special Die**, to cut 2 inch squares ..... **3.50**  
**Mallet**, 2 lbs. in weight, for use with above die..... **1.00**
48180. **Balance, Torsion**, for determining the number of yards per pound of fabric of any width without calculation or the use of weights. A three inch square sample is weighed and the position of the weight on the beam indicates the number of yards per pound of sample..... **40.00**  
**Special Die**, to cut 3 inch squares ..... **3.50**

We maintain a reference catalogue file of over seven hundred manufacturers and dealers in Laboratory Apparatus. Where large equipment lists are in preparation we recommend that customers avail themselves of the opportunity we provide for the convenient and undisturbed consultation of these catalogues before lists are finally prepared for estimates. The use of these catalogues involves no obligation to make purchase of us.

## THERMOMETERS

$$\text{Fahrenheit}^{\circ} = \frac{\text{Centigrade}^{\circ} \times 9}{5} + 32. \quad \text{Centigrade}^{\circ} = \frac{\text{Fahrenheit}^{\circ} - 32 \times 5}{9}$$

Nos. 48220 to 48221

48220. **Thermometers**, engraved on stem, with opal glass background and safety reservoir at top of capillary; diameter 6 mm; with either Centigrade or Fahrenheit scales as indicated. A widely used laboratory thermometer.

Range	100° C.	150° C.	200° C.	350° C.	212° F.	300° F.	400° F.	600° F.
Length, mm.	300	300	350	400	300	300	350	400
Each	1.00	1.10	1.25	1.50	1.00	1.10	1.25	1.50

48224. **Thermometer**, engraved on stem, with opal glass background and safety reservoir at top of capillary, diameter 6 mm; with both Centigrade and Fahrenheit scales.

Range, Centigrade	100° C.	150° C.	200° C.	360° C.
" Fahrenheit	212° F.	300° F.	400° F.	600° F.
Length, mm.	300	300	350	400
Each	1.25	1.50	1.75	2.00

48226. **Thermometers, A. H. T. Co. Special**, engraved on stem, with safety reservoir at top of capillary, of Jena 16 III glass; recommended for laboratory work generally where accuracy is required but where the expense of a precision thermometer is not justified.

Range, Centigrade	0-50°	0-50°	0-100°	0-100°	100-200°	0-200°	100-200°
Graduated to	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$
Length, mm.	330	380	400	600	500	600	600
Each	3.00	3.25	3.25	4.00	3.50	4.25	5.00

48228. **Thermometer, Precision**, etched on stem, with white background, of Jena 16 III glass. Those reading over 250° C. are filled with nitrogen. In the higher ranges the glass used is the Jena Borosilicate 59 IV.

Range	-10 to +100° C.	-10 to +100° C.	-10 to +100° C.	-10 to +100° C.	-10 to +250° C.
Graduated in	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$
Each, without certificate	2.75	3.50	5.00	9.00	2.75
Each, with P. T. R. certificate	3.65	4.40	7.25	11.50	5.75
Range	-10 to +250° C.	-5 to +360° C.	-5 to +360° C.	-5 to +500° C.	-5 to +550° C.
Graduated in	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$
Each, without certificate	4.50	5.00	6.50	7.50	9.00
Each, with P. T. R. certificate	7.50	7.25	8.75	10.85	13.45

48232. **Thermometers, Normal**, with enclosed glass scale, constructed in exact accordance with Paragraph 12 of the regulations of the Physikalisch-Technische Reichsanstalt; capillary is of Jena Normal glass. Thermometers reading from 250° to 400° C. are filled with nitrogen and those reading from above 400° C. to 550° C. with nitrogen at a pressure of 20 atmospheres.

Range	-10 to +100° C.	-10 to +100° C.	-10 to +100° C.	-10 to +100° C.	-5 to +200° C.
Graduated in	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$
Each, without certificate	4.50	7.00	10.00	15.00	6.00
Each, with P. T. R. certificate	5.40	7.90	12.25	17.50	8.50
Range	-5 to +200° C.	-5 to +200° C.	-5 to +360° C.	-5 to +360° C.	-5 to +360° C.
Graduated in	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{1}{10}$
Each without certificate	7.50	11.75	9.00	12.00	
Each, with P. T. R. certificate	10.00	15.15	11.25	14.25	

48236. **Thermometers, Normal**, same as above but etched on stem and with zero point indicated.

Range	+180 to +550° C.	+100 to 550° C.
Graduated in	$\frac{1}{10}$	$\frac{1}{10}$
Each, without certificate	11.00	13.50
Each, with P. T. R. certificate	15.45	17.95

**Note**—The above Normal Thermometers are the most accurate thermometers made for scientific work and are only surpassed by the Primary Standard Thermometers of the few European makers qualified for such work and which are used in research and are not intended for general laboratory use. These we import from such makers on special order only.

No. 48228

No. 48232

48244. Thermometers, engraved on stem, with white background and safety reservoir at top of capillary; nitrogen filled, for high temperature work; with Fahrenheit scale.

Range.....	212° to 750° F.	212° to 1000° F.
Graduated in.....	2°	5°
Length, mm.....	400	450
Each.....	6.00	8.00

No. 48244

48248. Thermometers, of Quartz Glass, with opal glass scale. These thermometers have the important advantage over all other thermometers that they do not crack by the application of either sudden heat or cold; such a thermometer, for instance, can be plunged directly into molten metal without any danger of its cracking. The temperature readings of a Quartz Glass thermometer, even when used for years, remain always constant because of the extraordinarily low expansion coefficient of quartz glass. These thermometers are about 6 mm in diameter and are graduated in single degrees.

Range.....	-10 to +400° C.	+100 to +400° C.	+100 to +450° C.
Length, cm.....	20	16	20
Each.....	18.00	18.00	20.00

48252. Thermometers, of Quartz Glass, with scale engraved on nickel-steel tube and filled with nitrogen above the mercury at a pressure of 50 atmospheres; range from +300° to +750° C. in 5° divisions.

Duty Free..... 28.50 Duty Paid..... 45.00

48256. Protecting Tube of steel, for above  
Duty Free..... 2.25 Duty Paid..... 3.00

No. 48260

48260. Thermometers, Normal, Allihn, with enclosed glass scale, in set of three with ranges of -15 to +100° C., +100° to +200° C., and +200° to +300° C. The thermometers are each about 30 cm long and about 8 mm in diameter, with zero and boiling point correction. In leather case without certificate..... 24.00  
With P. T. R. certificate..... 32.50

No. 48268

48264. Thermometers, Normal, Anschütz, with enclosed glass scale and small bulbs, as used for fractional distillations. Thermometers No. 2 to No. 7, inclusive are nitrogen filled, and all the thermometers of the series are 16 cm long and about 6 mm in diameter.

Number.....	No. 1	No. 2	No. 3	No. 4	No. 5	No. 6	No. 7

No. 48292

48276. **Reading Device for Beckmann Thermometer**, with 2 volt incandescent lamp for reading in a dark room..... 3.50  
 48280. **Reading Device**, as above, without incandescent lamp..... 2.00  
 48284. **Thermometer, Beckmann**, with total range of about  $5^{\circ}\text{C}$ . divided in  $\frac{1}{100}^{\circ}$ , with capillary held in place by glass wool; without auxiliary scale. Regularly furnished with scale reading from  $0$  to  $5^{\circ}\text{C}$ . as convenient for calorimetric use. This thermometer is of good German make of reasonable accuracy but is not regularly furnished with certificate..... 7.50  
 48288. **Thermometer, Beckmann, Goetze make**, with scale held in place by glass sealing, with auxiliary scale with range from  $-10$  to  $120^{\circ}\text{C}$ . in  $2^{\circ}$  divisions under reservoir; for use by either boiling point or freezing point method; range  $5^{\circ}$  to  $6^{\circ}\text{C}$ . divided in  $\frac{1}{10}^{\circ}$ ; highly recommended and widely used in calorimetry. **Without certificate**..... 15.00  
 With P. T. R. certificate..... 25.00

48292. **Thermometer, Beckmann**, similar to No. 48288 as to range, accuracy, etc., but with improved patent adjustment of auxiliary scale by means of mercury drops instead of by tapping. This is accomplished by the introduction of a short capillary in the lower part of the reservoir, the point of which is adjusted for delivering drops of mercury each equivalent to a definite range of the thermometer scale, which information is engraved on the scale of each thermometer as, for instance, 1 drop =  $1.5^{\circ}\text{C}$ . This arrangement prevents the dropping down of the mercury when an upward movement is necessary, and superfluous mercury may be transferred to the two arms at the side of the reservoir by simply inclining the thermometer. When a reservoir has become filled during transportation it will empty itself automatically if the thermometer is held perpendicularly. In other reservoir arrangements this is frequently prevented by the small particles of air which are often present in thermometers of best make. In this new arrangement such air particles are caught and held below the inlet in the reservoir. This arrangement makes possible very exact setting, greater durability and less risk of breakage in transportation and obviates the continuous tapping down of the mercury column as heretofore practiced. See *Chemiker-Zeitung*, 1912, Nr. 88, S. 843. **Without certificate**..... 18.00  
 With P. T. R. certificate..... 28.00

No. 48352	Thermometer, Dairy, with enclosed paper scale, 0 to 150° F., length about 8 inches. ....	.25
48356.	Thermometer, Incubator, short form, for hanging inside the incubating chamber. The thermometer is enclosed in a metal case with perforated outer sheath which turns so as to entirely enclose the thermometer, range from 0 to 50° C. ....	1.25
48360.	Thermometer, Incubator, with very distinct graduations on a white background, so as to be readily seen at a distance; range from 0 to 50° C. with the standard temperature 37½° C. indicated by a red line. Length 250 mm. ....	2.50
48364.	Thermometer, Incubator, self-registering maximum and minimum on Sixe's system; with opal glass scale 160 mm long graduated from -20° to +50° C. The standard temperature 37½° C. is indicated by a red line. The lower part for insertion in the tubulature of the incubator is 200 mm long. Complete with horseshoe magnet for adjusting the indicators. ....	5.50
48368.	Thermometers, Incubator, with enclosed opal glass scale with Jena capillary. The standard temperature 37½° C., at which incubators are ordinarily operated, is indicated by a red line.	
	Range.....	0 to 50° C. 10° to 60° C.
	Graduated in.....	1 1/2 1/2
	Length, cm.....	45 50
	Each.....	4.00 5.00
48372.	Thermometer, Maximum and Minimum, on oak back, with each tube mounted on a separate plate attached at one end with a thumbscrew so that the thermometers may be reset; range 10° to 40° F. below zero for the maximum tube and 20° to 60° below for the minimum tube, and up to 120° F. above; ordinary quality. ....	4.00
48376.	Thermometer, Maximum and Minimum, standard Weather Bureau pattern, of high quality and with certificate; with engraved stem, magnifying tube, cylindrical bulb, porcelain strip at side of tube on which are marked the figures and every fifth degree line of the scale, oxidized brass plate, insulating brass support with binding screws; board 13 by 5 inches, with mahogany finish. ....	10.00
48380.	Thermometers, Pocket, 5 inches long, mounted in a case similar to clinical thermometers; very convenient for various kinds of field work.	
	Range.....	-30 to 120° F. +30 to 220° F. 0 to 50° C. 0 to 100° C.

Nos. 48412, 48416 and 48420

No. 48424

No. 48428

No. 48432

No. 48436

48412. Thermo-regulator, Reichert. This regulator is carefully made and is the most widely used among the several forms constructed of mercury and glass; adjusted for high temperatures. . . . . 2.00
48416. Thermo-regulator, Reichert, same construction as No. 48412 but adjusted for low temperatures. . . . . 2.00
48420. Thermo-regulator, Reichert, same construction as No. 48416 but made shorter for use in paraffine baths. . . . . 2.00
48424. Thermo-regulator, Reichert, improved form, with stopcock to prevent total extinguishing of flame. . . . . 4.00
48428. Thermo-regulator, New Mercury Form, with reservoir tube with thermometer scale and two-way stopcock for adjustment. In setting the regulator the stopcock is set at position "A" and the bulb warmed until the mercury reaches the position "B" at the tip of the glass outlet tube. The stopcock is then turned to position "B" and the mercury column allowed to rise until it reaches the temperature at which the regulator is to operate, when the cock is turned again to position "A" and the thermo-regulator is in adjustment. . . . . 7.50
48432. Thermo-regulator, as above, with electric contact, otherwise operating on the same principle and by the same method as above. . . . . 10.00
48436. Thermo-regulator, Roux Bimetallic. The great advantage of this regulator consists in the entire absence of mercury and glass, the control depending upon the unequal expansion of the different metals composing the metallic couple. It has come into very wide use of recent years and is in many ways the most satisfactory form of thermo-regulator now offered. All of our bimetallic regulators are furnished with an additional brass jacket as shown in illustration. It is recommended that this jacket be inserted in the tubulature of the incubator and the same filled with glycerine, into which the regulator proper is immersed. This prevents the corroding of the bimetallic couple (which occurs in many localities because of the action of the water) and at the same time makes the regulator last longer.

No. 48440

48440. Thermo-regulator, Reichert-Nory. This regulator is based upon the principle of the Reichert Thermo-regulator with modifications. It works equally well for high or low temperatures and is specially recommended for accurate control when used with a gas pressure regulator. . . . . 5.00

- 48444. Thermo-regulator, Greenman.** Constructed entirely of steel and recommended as being the most accurate form of mercury regulator. Controls temperature within  $\frac{1}{2}^{\circ}$  regardless of gas pressure or room temperature. For use with this regulator burner No. 22936 is recommended. With brass jacket for glycerine to be inserted in tubulature of incubator. See *Anatomical Record*, Sept., 1908. Without mercury..... 12.50
- 48448. Thermo-regulator, same as No. 48444 but filled with mercury.**..... 14.50
- 48452. Gas Pressure Regulator,** for delivering gas to apparatus at a constant pressure, regardless of the variations of pressure in the house supply. Particularly recommended for use with the Reichert-Novy Gas Regulator No. 48440, with which it is possible to maintain very constant temperatures. Made of copper throughout..... 5.00
- 48456. Thermo-regulator, Electric, with Condenser.** Will automatically maintain a constant temperature through a wide range, i. e., between  $30^{\circ}$  and  $80^{\circ}$  C. The diaphragm consists of rubber and metal clamped securely between steel rings. As the expansion of rubber when exposed to heat is greater than that of metal, the diaphragm will move away from the platinum point at the slightest increase in temperature. This breaks the circuit and allows the incubator to cool until the diaphragm again touches the point. By varying the pressure between the adjusting screw and the diaphragm different degrees of heat in the incubator are thus obtained. Contact points are of platinum iridium and the condenser protects these contacts from being destroyed providing the electric current passing through same does not exceed  $\frac{1}{2}$  amperes, i. e., the current from usual incandescent sockets..... 10.00
- 48460. Thermo-regulator, Electric, with Incandescent Lamp Heater,** for heating incubators, paraffine baths, etc., not specially built for electric heating and control; consisting of thermo-regulator similar to above, with an incandescent lamp mounted on same board, with cord and plug for attachment to any lamp socket. It is usually sufficient to place same on the bottom of the incubator or oven and run the connecting cord through the horizontal hole found at the side of most incubators. The space required by the entire equipment is  $8 \times 8 \times 4\frac{1}{2}$  inches..... 12.50
- 48464. Thermo-regulator, Electric, expanding capsule type, "Break" form,** for use alone with any electrical heating medium which does not require more than 3 or 4 amperes. May be used on either 110 or 220 volt circuits either alternating or direct and for temperatures from  $15^{\circ}$  to  $160^{\circ}$  C. The range of each capsule is about  $20^{\circ}$  in the lower temperatures and nearly  $100^{\circ}$  in high temperatures. The capsule "C" must be within the heated chamber and the post "P" may be made longer or shorter depending upon the length of the tubulation into which post must be inserted, i. e., tubulation from the outside of the utensil through the air jacket, water jacket, etc., to the inner chamber. The screws "S" need not be used as in many utensils it is sufficient to allow the metallic cap "M" to rest on the top of the tubulation or of the incubator. Very satisfactory on incubators, ovens, water and oil baths, whether disc heaters, resistance coils or lamps are used for the heating medium. In ordering please state whether current is alternating or direct, range of temperature desired, size of chamber, and thickness and material of the walls of same for length of post "P;" and whether thermo-regulator is to be placed in a vertical or horizontal position, vertical being preferable. With instructions for wiring, and connections..... 7.00
- 48465. Extra Expansion Capsules.**..... 1.00
- 48468. Thermo-regulator, Electric, expanding capsule type,** similar in operation to No. 48464 but known as the "Make" form and for currents up to 8 or 10 amperes. Must be used with circuit breaker as a relay which indirectly interrupts the heating current. This is furnished with a circuit breaker consisting of a solenoid wound with a heavy wire and with large platinum iridium contacts..... 21.00

48472. Tiles, Earthenware, glazed on one side only; very convenient for supplying either a black or white background.  
Color..... Black White

48518.	Tongs, Crucible, of polished brass, double bent.			
	Length, mm.....	200	250	300
	Each.....	.55	.90	1.20
48520.	Tongs, Crucible, of nickel plated brass, double bent.			
	Length, mm.....	200	250	300
	Each.....	.65	1.00	1.30
48524.	Tongs, Crucible, of forged steel, nickel plated, single bent.			
	Length, mm.....	200	250	300
	Each.....	.50	.70	1.00
48528.	Tongs, Crucible, of forged steel, nickel plated, double bent.			
	Length, mm.....	200	250	300
	Each.....	.65	.85	1.20
48532.	Tongs, Crucible, of pure wrought nickel, double bent; 200 mm long.....			2.00
48536.	“ “ “ solid German silver, double bent, 230 mm long.....			1.50
48540.	“ “ “ with platinum tips or shoes. Our crucible tongs of steel No. 48528, of pure nickel No. 48532 and of solid German silver No. 48536 are furnished with platinum shoes or tips at the lowest market price of platinum.			
48544.	Tongs, Crucible, of pure wrought nickel with nickel chromium tips, double bent, 200 mm long. A new substitute for platinum tipped tongs and highly recommended.....			2.50
48548.	Tongs, Crucible, of malleable iron, single bent, heavy, for assay crucibles.			
	Length, inches.....	12	17	
	Each.....	.40	.50	
48552.	Tongs, Crucible, of wrought iron, double bent, 30 inches long; heavy for assay crucibles.....			1.75
48556.	Tongs, Cupel, of steel with curved ends and guide pin; 22 inches long.....			1.00
48560.	“ “ “ with bent ends and guide pin. Length, inches.....	20	25	30
	Each.....	1.00	1.00	1.00
48564.	Tongs, Scorifier, of spring steel. Length, inches.....	20	30	36
	Each.....	1.00	1.00	1.00

No. 48568

No. 48572

No. 48576

48568.	Triangles, of twisted iron wire. Length of side, inches.....	1½	2	3
	Each.....	.05	.05	.05
	Per dozen.....	.50	.50	.50
48572.	Triangles, of iron wire covered with pipe-stem.			
	Length of side, inches.....	1½	2	2½
	Each.....	.05	.05	.05
	Per dozen.....	.50	.50	.50
48576.	Triangles, of iron wire covered with pipe-stem, flanged in center.			
	Length of side, inches.....	1½	2	2½
	Each.....	.08	.08	.08
	Per dozen.....	.75	.75	.75

No. 48584

Nos. 48588 and 48592

48580.	Triangles, Solid Nickel.						
	Length of side, inches.....	1½	2	2½	3		
	Each .....	.15	.20	.25	.30		
48584.	Triangles, Hoskins Nickel Chromium, of heavy wire of square cross section and distinctly superior to triangles made of other market alloys of nickel and chromium. The alloy of which these triangles is made contains practically no iron and takes on a thin adherent protective coat of oxide which neither peels nor rubs off and which prevents the triangle adhering to platinum ware placed upon it.						
	Length of side, inches.....	1½	2	2½	3		
	Each .....	.20	.25	.30	.35		
48588.	Triangles, Opaque Fused Silica.						
	Length of each side, inches.....	1½	2	2½	3	4	
	Each .....	.75	.75	.90	1.00	1.15	1.25
48592.	Triangles, Nichrome Wire covered with pure fused opaque silica.						
	Length of each side, inches.....	1½	2	2½	3		
	Each .....	.25	.25	.35	.40		

48596. Trichinoscope, for the Trichina Test by Micro Projection. The compressorium sample is covered square by square in the field of the microscope and thrown on the screen. The observer controls both the focusing of the microscope and the movement of the specimen while observing the screen from position at table. The operation is much less laborious and more satisfactory than with the ordinary microscope. As furnished by us to the U. S. Department of Agriculture, Bureau of Animal Industry. The outfit includes iron supports, projecting system with two objectives, compressorium, nosepiece for revolving the objective, cooling chamber and hand regulating arc lamp for 5 amperes, direct current rheostat for same for 110 volts, and 50 pairs of carbons.

48600.	Duty Free.....	155.00	Duty Paid.....	208.00
48600.	Trichinoscope, as above, but with automatic arc lamp.		Duty Paid.....	253.00
48604.	Duty Free.....	190.00		
	Resistance, for 220 volt circuit.			
	Duty Free.....	5.40	Duty Paid.....	7.20

	Each	.06	.08	.09	.10	.14	.30	.45	

48664.	Tube, Vivien, for sugar analysis, as described in Fröhling & Schultz.....	.60
48668.	Tube, Hortvet, for use in the centrifuge in determining lead precipitates in the analysis of sugar and syrup. See Bulletin No. 107 of the U. S. Department of Agriculture, Bureau of Chemistry....	.75
48672.	Tubing, Flexible Metallic, recommended as being safer and much more permanent than rubber tubing, $\frac{1}{8}$ inch diameter. Per foot.....	.20
48676.	Tubing, Flexible Metallic, in lengths for Bunsen burner connections; with rubber connectors at both ends; $\frac{1}{4}$ inch diameter.	
	Length, feet.....	2      2 $\frac{1}{2}$ 3
	Each.....	.25      .30      .50
48678.	Extra Rubber Connectors, each.....	.05
21904.	Tumbler, of glass, with spout, capacity 7 oz.....	.10
48680.	" as above, without spout.....	.05

No. 48684

No. 48701

48684.	Turbidimeter, Jackson, for determining sulphates in water analysis, etc., complete with 22 cm tube.	12.00
48688.	Extra 22 cm tube, for above.....	2.50
48692.	" 75 cm ".....	5.00
48696.	Brass extension for use with long tubes.....	3.00
48700.	Candles, per dozen.....	2.50
48704.	Turbidimeter, U. S. Geological Survey type, as used in water analysis in connection with water plants. filtration installations, etc.; as described in Bulletin 151 of the U. S. Geological Survey and Bulletin 8 of the Division of Hydrography. Complete for both color and turbidity, packed in morocco covered case.....	30.00
48708.	Turbidimeter, as above, color outfit only, consisting of 6 amber color discs and 4 aluminum color tubes, packed in morocco covered case.....	27.00
48712.	Turbidity Tape, flexible, with rod, in wooden case.....	5.00

Large equipment lists can not always be made up from the catalogues of any one manufacturer or dealer. The leading European manufacturers of Laboratory Apparatus supply us with their original catalogues in limited quantities for distribution to intending purchasers. A partial list of such manufacturers is found on page V.

A selection of catalogues of the leading manufacturers of Europe can be obtained from us more promptly than by writing to all of the firms in whose goods you are interested.

48792.	Urea Bulb, Folin, for determination of urea.	1.00
48796.	Urea Apparatus, Folin, complete, consisting of special urea bulb No. 48792, flask and rubber stopper.	1.30
48800.	Saccharometer, Einhorn Fermentation, for the determination of sugar in urine; consisting of a graduated fermentation tube and a graduated test tube. The percentage of sugar present is read directly on the tube.	.75
48804.	Saccharometers, set of two, one for the urine under examination and the other for a normal urine to which glucose has been added for the purpose of testing the efficiency of the yeast used.	1.50
48808.	Saccharometer, Lohmstein, for the accurate determination of sugar in diluted urine.	2.25
48812.	Saccharometer, Lohmstein Precision or large model, for use with undiluted urine.	6.00
48816.	Fermentation Saccharometer, Einhorn's improved form with glass stopcock and graduated test tube as furnished with No. 48800.	2.00
48820.	Fermentation Saccharo-manometer, on wooden board for hanging on the wall. As described in <i>Medizinischen Wochenschrift</i> , 52, Jahrg., Heft 48. A new and convenient device for estimating the sugar in urine with an accuracy approximating the polarimetric method.	9.00
48824.	Ureometer, Doremus, for the quantitative determination of urea in urine by the hypobromite method; with pipette, but without glass foot.	.75
48828.	Ureometer, Doremus, same as No. 48824, on glass foot.	1.00
48832.	Dropping Pipette, only, for use with No. 48824 or No. 48828.	.20
48836.	Ureometer, Doremus-Hinds, improved form, with graduated side tube with glass stopcock from which the exact amount of urine may be introduced into the fermentation tube without any gas escaping from the bulb; without foot.	2.50
48840.	Ureometer, Doremus-Hinds, same as No. 48836 on glass foot.	2.75
48844.	Uricometer, Ruhemann, for the quantitative determination of uric acid.	2.50
48848.	Urinometer, Squibb, graduated from 1.000 to 1.060; length 120 mm; in case with cylinder but without thermometer.	.75
48852.	Cylinder only for above.	.15
48856.	Thermometer only for above.	.40
48860.	Urino-Pycnometer, Saxe, for the rapid determination of the specific gravity of small quantities of urine, with cylinder, in case.	2.50

48864. **Urinometer, Precision**, set of 4 spindles with a range of 1.0060 to 1.0380, for 100 cc of urine; with cylinder, in case. Can be also used for the calculation of the lowering of the freezing point in albumen and sugar-free urine by use of the factor 0.75° C. See *Zeitschrift für angewandte Chemie* 1902, Seite 1072 and *Sahlh "Lehrbuch der klinischen Untersuchungsmethoden, 5. Auflage 1909, Seite 752*. Per set..... 6.00
48868. **Urinometer, Precision**, same as above but with thermometer on each spindle. Per set..... 8.00
48872. **Urinometer, Vogel**, for accurately determining the specific gravity of urine, consisting of two spindles graduated respectively from 1.000 to 1.025 and from 1.025 to 1.050; with cylinder..... 1.50
48876. Cylinder only for above..... .50
48880. Spindles " " each..... .50
48884. **Vapor Density Apparatus, Victor Meyer**, improved form, complete..... 2.00
48888. Inner Tube only for above..... 1.00
48892. Outer Tube..... 1.00
48896. Glass Bottle with ground glass stopper for above..... .10
48900. **Vials**, glass stoppered, flat bottom with slight neck and ground in air tight stopper; so-called "Specimen" vials.

48924. **Warming Table, Huber**, with top of heavy copper 14 inches long by 4 inches wide; for fixing blood films, drying micro sections, etc..... 1.25

48928.	Washing Bottle, consisting of a No. 28104 Flask, extra heavy, rubber stopper and glass tubes.				
	Capacity, cc.....	250	500	1000	2000
	Each.....	.40	.50	.75	1.00
48932.	Fittings only for Washing Bottle No. 48928, i. e., rubber stopper and glass tubes without flask.....	.10			
48936.	Washing Bottle, New Jena Glass, with rubber corks and Jena glass tubes.				
	Capacity, cc.....	250	500	1000	1500
	Each.....	.68	.90	1.05	1.20
48940.	Washing Bottle, Faraday, consisting of a No. 28104 flask, extra heavy, with rubber stopper, glass tubes with rubber joint in outlet tube to give flexibility.				
	Capacity, cc.....	250	500	1000	2000
	Each.....	.40	.50	.75	1.00
48944.	Fittings only for Washing Bottle No. 48940, i. e., rubber stopper and glass tubes without flask.....	.10			
48948.	Washing Bottle, same as No. 48940 but with rattan covered neck. For convenient holding while hot.			500	1000
	Capacity, cc.....				
	Each.....			.70	.90
48952.	Washing bottle, arranged for continuous flow, 500 cc capacity.....				.70
48956.	Fittings only for Washing Bottles, consisting of rubber stopper, and glass tubes arranged for continuous flow.....				.50
48960.	Washing Bottle, for volatile liquids, with ground in glass stopper.				
	Capacity, cc.....	125	250	500	1000
	Each.....	.80	1.00	1.25	1.50
48964.	Washing Bottles, for volatile liquids, with ground in glass stopper and two glass stopcocks.				
	Capacity, cc.....	125	250	500	1000
	Each.....	2.25	2.50	2.75	3.00

48968. Washing Apparatus, Bain, for microscopic material; consisting of a glass cylinder with base and a discharge tubulation at the top; with a plain glass tube fitting into same with a one-hole cork stopper at bottom and a set of 6 sieve thimbles, one end of which is bound with fine silk bolting cloth. The washing liquid is allowed to drop into the inside cylinder and, after passing through the sieves, rises in the outside cylinder and flows off through the outlet "C," with 6 sieve thimbles. 2.50

48972. Extra Sieve Thimbles, each..... .25

48976. Waste Pail, Aseptic Enamel Ware; of seamless steel, white enamelled, both acid and fire proof; very convenient in the laboratory; with perforated tray which retains the solid matter such as filter paper, etc.; which may be lifted out before the bucket is emptied; 16 inches high, 12 inches diameter, 5 gallons capacity. 6.00

No. 48976

48980.	Watch Glass, with concave center and a small facet on the bottom; 45 mm diameter.	Each	.05
		Per dozen	.50
48984.	Watch Glasses, of well annealed glass, with edges smoothly ground.

48992.	Watch Glasses, in Pairs, with edges accurately ground together, for use with clamps No. 24670. These are not to be confused with counterpoised watch glasses No. 49000.		
	Diameter, mm.....		50         65
	Per pair.....		.15         .25
48996.	Watch Glasses, in Pairs, with clamps No. 24670.		
	Diameter, mm.....		50         65
	Per pair.....		.30         .45
49000.	Watch Glasses, Counterpoised in Pairs, accurately adjusted for interchangeable use on balance pans.		
	Diameter, mm.....	50         65         75	
	Each.....	.65         .75         1.00	
49004.	Watch Glass, Embryological, consisting of a glass block $\frac{1}{2}$ inches square with a concavity $\frac{1}{4}$ inches in diameter by $\frac{3}{8}$ inch deep; and with one vertical surface ground for writing upon. Bottom of concavity is fairly flat but with mold finish, i.e. not polished, with glass cover.....		.08
49008.	Watch Glass, Embryological, similar to No. 49004 but with polished spherical concavity.....		.15
49012.	" " " " " " " " of polished black glass.....		.25
49016.	" " " " made of a single piece of polished plate glass with concavity with flat polished bottom and plate glass cover; concavity is 30 mm in diameter by 6 mm deep: the flat polished bottom permits its satisfactory use on the microscope stage.....		.50
49020.	Watch Glass, Embryological, of white glazed Royal Berlin porcelain, 30 mm square with a concavity 21 mm in diameter.....		.25
49024.	Watch Glass, Syracuse form, without ground bevel. Each.....		.05
	Per gross.....		6.00
49028.	Watch Glass, Syracuse, as above but with ground bevel for writing upon. Each.....		.06
	Per gross.....		7.50
49032.	Watch Glasses, of glazed porcelain. Furnished in nests of five dishes, with cover.		
	Outside diameter, inches.....	2 $\frac{1}{2}$	3
	Each.....	.60	.70
49036.	Watch Springs, for burning in oxygen. Per dozen.....		.25

	No. 49064	No. 49068			No. 49072			No. 49076	
49040.	Water Baths, of heavy copper, tin lined; hemispherical form, with concentric rings, cover and steam escape.								
	Diameter, inches.....	4	5	5½	6	8	10	12	
	Each.....	1.00	1.25	1.40	1.60	2.50	5.00	9.50	
49044.	Water Baths, same as No. 40940 but with cock and exhaust for steam heating.								
	Diameter, inches.....					6	8	10	
	Each.....					3.50	4.50	8.00	
49048.	Water Baths, same as No. 40940 but with constant water level.								
	Diameter, inches.....	4	5	5½	6	8	10	12	
	Each.....	1.60	1.85	2.00	2.20	3.10	5.60	10.10	
49052.	Water Baths, of cast iron, white enamelled inside; with flange for supporting tripod and copper rings.								
	Diameter, mm.....				120	150	200	240	
	Each.....				1.50	2.25	3.50	4.60	
49056.	Water Bath, of pressed sheet steel, inside white enamelled, outside maroon enamelled; with copper rings but without tripod.								
	Diameter, mm.....						160	200	
	Each.....						3.50	5.00	
49060.	Water Bath, of polished copper, tin lined; with cover, steam escape, copper concentric rings and perforated plate for test tubes.								
	Diameter, inches.....						6	8	
	Each.....						3.00	4.50	
49064.	Water Bath, Blair, with test tube rack; of polished copper, 175 mm diameter; as used in iron analysis								
									3.50
49068.	Water Bath, Hofmann, of heavy polished copper with diameter at top 8 inches, with a set of concentric rings and plate with five holes of different sizes each with cover. With constant water level and handles, without tripod.								
									6.75
49072.	Water Bath, Royal Berlin Porcelain, consisting of two porcelain dishes fitting one inside the other.								
	Outside diameter, mm.....						110	140	
	Each.....						1.20	1.80	
49076.	Water Level Regulator, of brass, can be attached to any of our water baths. The level of the water is regulated by adjusting the center brass tube; length 3½ inches.

49080. Water Bath, new form, with water level regulator; of polished copper, 6 inches in diameter by 4 inches deep, on tripod 9 inches high. . . . . 6.00
49084. Water Bath, consisting of Bath No. 49040 of sheet steel, white enamelled inside and maroon enamelled outside, with copper rings, water level and special tripod to fit; 160 mm diameter. . . . . 6.00
49088. Water Baths, funnel form, with tripod and constant water level.  
Diameter, inches. . . . . 6 8  
Each. . . . . 3.50 4.50
49092. Water Bath, for dissolving steel samples; of heavy, polished copper, tinned inside, with test tube rack, 6 inches in diameter by 7 inches high, taking eighteen  $6 \times \frac{7}{8}$  inch dissolving tubes. . . . . 4.50
49096. Water Bath, rectangular, for dissolving steel samples, of heavy copper  $7\frac{1}{2}$  inches square by  $6\frac{1}{2}$  inches high; with perforated tray to hold 25 test tubes  $8 \times \frac{7}{8}$  inches; on support with iron legs. . . . . 6.50
49100. Water Bath, of cast iron, white enamelled inside, with copper rings, constant water level, tripod and safety gauge; for use with inflammable liquids. . . . . 160 200  
Diameter, mm. . . . . 9.00 11.50  
Each. . . . . 160 200
49104. Perforated Inset, of polished copper, for use in water baths No. 49040 and No. 49064  
For bath, mm. . . . . 160 200  
To hold test tubes. . . . . 18 34  
Each. . . . . 1.50 2.00

No. 49108

49108. Water Bath, Wiley, Patented, heavy copper, for economizing time and gas; with twelve holes  $3\frac{1}{2}$  inches in diameter and two holes  $5\frac{1}{2}$  inches in diameter. The top of the bath is  $14 \times 25\frac{1}{2}$  inches; the cup is of heavy spun copper and easily replaced when burnt out; without porcelain rings. . . . . 25.00

No. 49164

No. 49164

49164. Water Bath, Electric, of heavy polished copper, tin lined, with heating coil immersed in the water chamber. This coil is arranged for three heats, controllable by means of a one-plug switch. It will hold water at the boiling point when running on the high heat. The smaller size bath takes 400 Watts per hour on the high heat. At the rate of 8¢ per KW, the operating expense on the high heat is 3.2¢ per hour, on the medium heat 1½¢ and on the low heat ½¢ per hour. A removable cover is provided containing two sets of rings on the small bath and four sets on the large bath, also a removable copper tray resting inside of the bath for use with beakers, evaporating dishes, etc., immersed in the water as shown in illustration. The bath provides a very convenient method for the distillation of volatile liquids with absolute safety because of the immersion of the heating element, also fat extractions, etc., as shown in illustration. No special wiring is necessary, the connection being made with ordinary lighting circuit either alternating or direct current but voltage must be specified in ordering.

## INDEX

An endeavor has been made to make this index very complete in that articles are indexed under the principal words of the name and in addition under the author's name, thus, "Blair's Water Bath" will be found under "Bath, Water, Blair," "Water Bath, Blair" and "Blair Water Bath." As the authors' names are printed in heavy face type and in alphabetical sequence, the usual Authors' Index is omitted.

BAKER ANALYZED

MERCK BLUE LABEL

KAHLBAUM CERTIFIED FOR ANALYSIS

### PART II—REAGENTS

COPYRIGHT, 1914

BY ARTHUR H. THOMAS COMPANY

EDITION SEPTEMBER 1914

ARTHUR H. THOMAS COMPANY

WEST WASHINGTON SQUARE

(230-2-4 SOUTH 7th ST.)

PHILADELPHIA

U. S. A.

Our experience has shown us that no chemist wishes to confine his purchases of high grade reagents for analytical purposes to those produced by any one manufacturer.

The advantage of placing orders with a dealer offering the three most reliable lines of analyzed and tested reagents is, therefore, obvious in that the products of various manufacturers can be purchased at one time, on one order and received in one shipment.

Where competitive bids on high grade reagents are required the customer will please specify the maker whose goods are preferred, using such maker's nomenclature as to purity, size of package, etc.

It is impossible to make intelligent competitive bids upon specifications such as "Kahlbaum, Merck or Baker" "all chemicals to be c.p." "all chemicals to be of highest grade" "Kahlbaum c.p." "Merck c.p." as no two bidders will quote on the products of the same maker for each of the items in the list and also because both Merck and Kahlbaum omit entirely the use of the designation c.p.

We believe that the responsibility as to the choice of maker belongs to the buyer rather than to the dealer and that such responsibility should be assumed by the buyer when preparing lists for competitive bids. This does not apply, however, in quoting upon goods of ordinary grade carried in stock in bulk and packed in quantities as desired.

## PREFACE

In this price list we offer in original factory packages three leading makes of tested reagents i. e., BAKER ANALYZED, MERCK BLUE LABEL and KAHLBAUM'S CERTIFIED FOR ANALYSIS, and, in addition, less expensive chemicals carefully selected to meet less exacting requirements. These are secured from reliable factories in both Europe and America, and in most cases, are distinctly superior to the ordinary so-called "commercial" grade.

The chemicals herein listed are those which have been most frequently ordered from our stock in the past fourteen years as shown by carefully kept records during this period. We have not attempted to include all the chemicals which may be required in modern laboratory work, particularly in the line of organic preparations which our experience has shown to be demanded mostly by buyers entitled to duty free importation for educational use, and which we furnish in most cases by direct importation from Europe upon orders made out from manufacturer's price list. Chemicals not in stock are secured promptly and economically from specified or best available makers.

Stains and reagents required in Bacteriology, Microscopy and other of the Biological Sciences have been given special attention and our list is offered as being unusually complete in this direction.

**DUTY FREE IMPORTATION.** Buyers entitled by law to duty free importation are encouraged to secure from us the original catalogues of the European makers such as Kahlbaum, Marquart, Schuchardt, DeHaen, etc. Duty free quotations on products of the European factory of E. Merck must be made specially as this firm does not permit the distribution of their German catalogue in the United States. Our facilities for prompt and economical duty free importations are the result of years of effort and insure the buyer lower cost and less trouble than when orders are placed directly with the European manufacturers. **Parallel, competitive bids for duty free importation cannot be accurately made unless the buyer specifies the exact grade of chemical desired in terms of the maker's price list.**

**CONTAINERS.** Containers are charged for extra at price indicated in marginal column except where designation "incl." is given, in which case the container cost is included in the cost of the chemical. Our designations for containers in the marginal column are as follows:—

cb. Cork stoppered bottle.	cn. Tin can.
gb. Glass stoppered bottle.	bx. Box.
rb. Rubber stoppered bottle.	jjg. Jug.
cc. Cylindrical carton.	

We emphasize the convenience of our cylindrical, paraffined card-board cartons in which many of our ordinary chemicals are furnished. They are much superior to the paper bag in common use and provide a suitable container until contents are used. We allow credit, if returned to us charges paid in clean condition, for five pint and one pound acid bottles and carboys, when original purchase has been made from us and containers bear our label. Other glass stoppered bottles, and cork stoppered bottles are not returnable for credit. Arrangements are made with those regularly buying Baker's acids and ammonia of us for the direct shipment of containers to the factory at Phillipsburg, N. J.

**SHIPMENT RESTRICTIONS.** Under United States laws and regulations established by the Interstate Commerce Commission, certain chemicals are prohibited from express shipment and must in all cases be shipped by freight. These are indicated by an asterisk thus (\*). Chemicals designated thus (\*) are accepted by express companies under definite restrictions as to quantity, size of package, method of packing, etc. As all of these restrictions are without our control we accept all orders and make all contracts subject to them and charge extra for all extra packing expenses as required by the above mentioned regulations.

**TERMS AND PRICES.** All prices are subject to change without notice. With the exception of Baker's Analyzed Chemicals on which we extend special net prices considerably less than the printed list, the prices in this catalogue may be generally taken as net. It has been found impracticable to quote a uniform discount rate because of price fluctuations. Special prices will be extended on large quantities of single items or on large general lists.

We are not manufacturers of chemicals but are dealers and importers. Our function is to afford scientists an economical and convenient source of supply for the chemicals they most frequently require, no matter where or by whom they are manufactured, and, in the case of the purest grades of chemicals to deliver in the manufacturer's original packages so that full responsibility as to quality rests definitely upon the manufacturer, where it belongs. Chemicals are freely added to our price list and carried in stock when demand develops or our attention is called to future need.

# BAKER, MERCK AND KAHLBAUM

## ANALYZED, STANDARDIZED AND CERTIFIED

## REAGENTS FOR ANALYSIS

BAKER BOTTLE

MERCK BOTTLE

KAHLBAUM BOTTLE

**BAKER ANALYZED CHEMICALS**—In making the analysis samples are taken 50 or 100 lbs. of material and tests are made for all probable impurities. Each lot is numbered and every package filled from the lot bears the lot number so that the contents of any package can be identified and traced back through the entire process of manufacture. When impurities are found and can be determined quantitatively the amount is stated in percentages. The minus sign (—) means that the amount of impurity is less than is indicated by the figures, the term "None" that no appreciable amount of the impurity tested for has been found in the sample. The term "Trace" indicates the presence of a minute amount of impurity only detectable by qualitative methods. The analyses given throughout the catalogue are intended as typical and goods furnished are not guaranteed to be exactly in accordance with these analyses.

**MERCK BLUE LABEL REAGENTS**—These reagents are standardized as well as analyzed as each reagent must conform to the standard of purity given in Krauch's *"Chemical Reagents, Their Purity and Tests"* before packing under the Blue Label. The standard of purity given on the printed label and under each item throughout this catalogue is, therefore, absolutely guaranteed. A reagent under Merck's Blue Label is, therefore, standard at all times so long as it is delivered in the original package. The distinctive Blue Label is used on these tested and standardized reagents in contradistinction to the White Label as used on Merck photographic, medical and technical chemicals. To avoid confusion and mistakes customers will kindly use the term "Merck Blue Label" or "M.B.L." in ordering these goods.

**KAHLBAUM CERTIFIED FOR ANALYSIS REAGENTS**—These reagents are high in price but embody a degree of purity offered by no other maker as will be seen by comparison of the analyses printed under each substance. The method of analysis, i.e. amount of impurity present in a definite weighable quantity, has commended itself to those interested in using reagents of highest possible purity. These reagents are listed in the Kahlbaum German price-list as "zur Analyse, mit Garantieschein" and are more expensive than those listed under the designation "zur Analyse." A quantity of 10 grams is used for each analysis and the statements on the labels are based on the following explanation:—

Spur (trace)	=	less than $\frac{1}{100}$ milligram	} in 10 grams of material
Kaum Spur (slight trace)	=	" " $\frac{2}{100}$ " "	
Hauch (faint trace)	=	" " $\frac{3}{100}$ " "	

The bottles are all sealed with lead in the Kahlbaum factory and in addition to the statement on each label a printed guarantee is furnished with each package. There may be a slight variation in the amount of impurity shown by the analysis on packages sent out from different lots but this variation is always exceedingly slight. We keep on hand for free distribution a supply of Kahlbaum's latest price list for the use of customers placing import orders, particularly those for Educational Institutions, which may be imported free of duty.

## Dry Stains in Tablets, “Soloid” Brand

The tendency of solutions of the aniline dyes to decompose has always been a source of trouble in microscopic work. The “Soloid” Microscopic Stains contain aniline dyes of the highest quality, and make it possible to prepare solutions in small quantities as required. By their use waste is avoided, and correct results are assured. These are supplied in tubes containing six tablets each. Instructions for making solutions are furnished with each tube.

In Loeffler's alkaline methylene blue, aniline gentian violet and Ziehl's carbol fuchsin the solutions obtained are only approximately equivalent to those prepared according to the original formulæ. The figures avoid small fractions in measurement, enabling the solution to be prepared more readily, without diminishing the efficiency of the stain.

	Per tube	Per doz. tubes
<b>BISMARCK BROWN,</b> pure 0.1 gram. Dissolve one “Soloid” Bismarck Brown in 7 cc of absolute alcohol and add 7 cc of distilled water.....	\$0.25	\$2.55
<b>BORAX METHYLENE BLUE.</b> Dissolve one “Soloid” Borax Methylene Blue in 10 cc of distilled water.....	.25	2.55
<b>EHRlich's TRIPLE STAIN</b> (Biondi-Ehrlich-Heidenhain Triple Stain). Dissolve one “Soloid” Ehrlich Triple Stain in 25 cc of distilled water, one “Soloid” Acid Fuchsin in 2 cc of distilled water and mix. The mixture is ready for use and keeps well.....	.30	3.15
<b>EOSIN,</b> pure, 0.1 gram. To obtain a solution of eosin suitable for general staining, one “Soloid” product may be dissolved in 20 cc of 50% alcohol. This gives a 0.5% solution.....	.25	2.55
<b>EOSIN-AZUR</b> (for Giemsa staining) 0.088 gram. Dissolve one “Soloid” product in 5 cc of a mixture of equal parts of glycerine and pure methyl alcohol.....	.50	5.70
<b>EOSIN-METHYLENE BLUE</b> (Louis Jenner's Stain) pure 0.05 gram. Dissolve one “Soloid” product in 10 cc of pure methyl alcohol.....	.25	2.55
<b>FUCHSIN</b> (Basic) pure, 0.1 gram. Dissolve one “Soloid” Fuchsin in 2.5 cc of absolute alcohol and add 10 cc of distilled water.....	.25	2.55
<b>GENTIAN VIOLET,</b> pure, 0.1 gram. Dissolve one “Soloid” Gentian Violet in 7 cc of absolute alcohol and add 7 cc of distilled water.....	.25	2.55
<b>GRAM'S IODINE SOLUTION,</b> 15 cc. Dissolve one “Soloid” product of reagent A in 10 cc of distilled water, add one of reagent B, and when solution is complete, dilute to 15 cc with distilled water.....	.25	2.55
<b>HAEMALUM—</b> Each “soloid” product contains Haematein, .0005 grm, and Ammonia Alum, 0.25 gram. To prepare the stain, one product is ground up with 5 cc of distilled water, and boiled a few minutes. A clear solution is thus obtained.....	.25	2.25
<b>HAEMATOKYLIN,</b> pure, 0.1 gram. Dissolve one “Soloid” Haematoxylin in 1 cc of absolute alcohol and add 2 cc of distilled water.....	.25	2.55
<b>METHYLENE BLUE,</b> pure, 0.1 gram. Dissolve one “Soloid” Methylene Blue in 7 cc of absolute alcohol and add 7 cc of distilled water.....	.25	2.55
<b>METHYL VIOLET,</b> pure, 0.1 gram. Dissolve one “Soloid” product in 1 cc of absolute alcohol and add 5 cc of distilled water.....	.25	2.55
<b>ROMANOWSKY STAIN</b> (Leishman's Modification). Dissolve one “Soloid” product in 10 cc of pure methyl alcohol.....	.25	2.55
<b>ROMANOWSKY STAIN</b> (Wright's Modification). Dissolve one “Soloid” product in 10 cc of pure methyl alcohol.....	.25	2.55
<b>THIONIN BLUE,</b> pure, 0.1 gram. Dissolve one “Soloid” Thionin Blue in 10 cc of absolute alcohol and add 5 cc of distilled water.....	.25	2.55

	Per tube	Per doz. tubes
<b>TOISON BLOOD FLUID.</b> For the preservation of blood corpuscles and the counting of the same. Dissolve one "Soloid" product in 3 cc of glycerine and 16 cc of distilled water. The solution should always be filtered immediately before use. It acts as a simple diluent, prevents clotting and preserves the natural appearance of the red corpuscles. At the same time the nuclei of the white corpuscles are faintly tinted, so as to facilitate their recognition and counting; but no means is afforded for discriminating between the different varieties.	.25	2.55
<b>METHYL ALCOHOL</b> , pure, in hermetically sealed glass phials containing 15 cc.	.25	3.00

## Staining Material in Solution

These solutions are made in every case in accordance with the author's latest formula, and from Gruebler's dry stains. Because of the instability of many of these solutions, we cannot guarantee their performance unless they are used promptly after delivery. We recommend the purchase of dry stains and the preparation of solutions in the laboratory, as the most satisfactory and economical method. The solutions listed below are those for which we have most demand and are kept in stock ready for immediate delivery. Others made promptly to order.

	Author	25 Grams	100 Grams
<b>AMMONIA WATER-GENTIAN VIOLET.</b>	Weigert.	.28	.45

## Reagents for Serological Work

These reagents are furnished in original packages only and are manufactured by the H. K. Mulford Company.

	Size pkg.	Per pkg.
AGGLUTINATING SERUM, Cholera.....	1 grm.	2.00
“ SERUM, Typhoid.....	1 grm.	2.00
“ SERUM, Paratyphoid, “A”.....	1 grm.	2.00
“ SERUM, Paratyphoid, “B”.....	1 grm.	2.00
ANTIHUMAN HEMOLYTIC AMBOCEPTOR PAPER.....	10 tests	3.00
ANTISHEEP HEMOLYTIC AMBOCEPTOR.....	1 cc.	5.00
“ HEMOLYTIC AMBOCEPTOR PAPER.....	10 tests	3.00
ANTIGEN-NOGUCHI.....	10 tests	3.00
ANTIGEN, Cholesterin, Fortified.....	10 tests	2.00
BORDEN OUTFIT for Serodiagnosis of Typhoid Fever.....	Outfit	3.50
BASS TEST for Serodiagnosis of Typhoid Fever.....	60-120 tests	2.50
NOGUCHI REAGENTS, Antigen and Amboceptor.....	10 tests	5.00

## Kahlbaum Collections

Kahlbaum collection of 200 different Carbon combinations, in stoppered glass specimen vials with foot, each containing from 15 to 150 cc. of material. Imported to order only. Price “duty free”.....	\$75.00
Kahlbaum collection of 98 substances in glass vials, arranged according to Knorr & Duden for the introduction to the study of organic chemistry. Imported to order only. Price “duty free”.....	9.00
Kahlbaum collection for demonstrations in physical chemistry without loss of material, after Prof. Dr. E. Bosc, experiments 1 to 17, with printed directions, packing included, but without tube No. 8b of Carbonic Acid. Imported to order only.	
Price, “duty free”.....	52.75
Carbonic Acid tube, extra, “duty free”.....	4.80

## Liquified Gases

Liquefied Gases, in glass tubes for demonstrations, Kahlbaum. Each tube furnished in a velvet lined case. Imported to order only.

	Duty Free
Ammoniak (Ammonia).....	\$3.20
Chlor (Chlorine).....	3.20
Cyan (Cyanogen).....	5.12
Kohlenoxysulfid (Carbon Oxy-sulphide).....	5.12
Kohlensäure (Carbon Dioxide).....	4.80
Methyläther (Methyl Ether).....	3.84
Methylchlorid (Methyl Chloride).....	2.88
Nitrosylchlorid (Nitrosyl Chloride).....	4.48
Phosgen (Phosgene).....	2.56
Salzsäure (Hydrochloric Acid).....	3.84
Schweflige Säure (Sulphur Dioxide).....	2.56
Schwefelwasserstoff (Hydrogen sulphide).....	5.12
Stickoxydul (Nitrous Oxide).....	5.12
Stickstofftetroxyd (Nitrogen Peroxide).....	4.48
